**The WSJ Guide to the 50 Economic Indicators That Really Matter** Simon Constable,Robert E. Wright,2011-05-03 A wonderfully irreverent and endlessly entertaining guide—with more than 80,000 copies sold worldwide in multiple languages—about the indicators most investors aren't following, but should be! In order to make the best possible investment decisions, savvy investors know that they must pay close attention to economic indicators. But while most are looking at conventional barometers like unemployment rates and housing statistics, the smartest investors are following the curious and often ignored indicators that offer a true sense of where the economy is and where it's heading. These factors have been proven to provide the vital information needed to beat the market. Dow Jones columnist Simon Constable and respected financial historian Robert E. Wright offer valuable tips and insight to help investors forecast and exploit sea changes in the global macroeconomic climate. Unlike other investment handbooks, Constable and Wright's guide explores the little-known economic indicators that the smartest investors watch closely in order to beat the stock market—from “Big Macs” to “zombie banks.” This valuable and informative read entertains and enlightens while offering essential advice on navigating the global economic climate.

**Human Rights Indicators in Development** Siobhan McNerney-Lankford,Hans-Otto Sano,2010-10-26 Human rights indicators are central to the application of human rights standards in context and relate essentially to measuring human rights realization, both qualitatively and quantitatively. They offer an empirical or evidence-based dimension to the normative content of human rights legal obligations and provide means of connecting those obligations with empirical data and evidence, and in this way relate to human rights accountability and the enforcement of human rights obligations. Human rights indicators are important both for assessment and diagnostic purposes: the assessment function of human rights indicators relates to their use in monitoring accountability, effectiveness and impact, while the diagnostic purposes relates to measuring the current state of human rights implementation and enjoyment in a given context, whether regional, country-specific or local. This paper offers a preliminary review of the foregoing in the development context, and a general perspective on the significance of human rights indicators for development processes and outcomes. It is not intended to be prescriptive and does not provide specific operational recommendations on the use of human rights indicators in development projects. Nor does it advocate a particular approach or mode of integrating human rights in development, or argue for a rights-based approach to development. This paper is designed to provide development practitioners with a preliminary view on the possible relevance, design and use of human rights indicators in development policy and practice. It also introduces a basic conceptual framework about the relationship between rights and development, including in the World Bank context and surveys a range of methodological approaches on human rights measurement, exploring in general terms different types of human rights indicators and their potential implications for development at three different levels of convergence or integration.

*The Global Findex Database 2017* Asli Demirguc-Kunt,Leora Klapper,Dorothe Singer,Saniya Ansar,2018-04-19 In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at [www.worldbank.org/globalfindex](http://www.worldbank.org/globalfindex).

**Web Indicators for Research Evaluation** Michael Thelwall,2022-05-31 In recent years there has been an increasing demand for research evaluation within universities and other research-based organisations. In parallel, there has been an increasing recognition that traditional citation-based indicators are not able to reflect the societal impacts of research and are slow to appear. This has led to the creation of new indicators for different types of research impact as well as timelier indicators, mainly derived from the Web. These indicators have been called altmetrics, webometrics or just web metrics. This book describes and evaluates a range of web indicators for aspects of societal or scholarly impact, discusses the theory and practice of using and evaluating web indicators for research assessment and outlines practical strategies for obtaining many web indicators. In addition to describing impact indicators for traditional scholarly outputs, such as journal articles and monographs, it also covers indicators for videos, datasets, software and other non-standard scholarly outputs. The book describes strategies to analyse web indicators for individual publications as well as to compare the impacts of groups of publications. The practical part of the book includes descriptions of how to use the free software Webometric Analyst to gather and analyse web data. This book is written for information science undergraduate and Master's students that are learning about alternative indicators or scientometrics as well as Ph.D. students and other researchers and practitioners using indicators to help assess research impact or to study scholarly communication.

*Indicators for Monitoring Undergraduate STEM Education* National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Board on Science Education,Committee on Developing Indicators for Undergraduate STEM Education,2018-04-08 Science, technology, engineering and mathematics (STEM) professionals generate a stream of scientific discoveries and technological innovations that fuel job creation and national economic growth. Ensuring a robust supply of these professionals is critical for sustaining growth and creating jobs growth at a time of intense global competition. Undergraduate STEM education prepares the STEM professionals of today and those of tomorrow, while also helping all students develop knowledge and skills they can draw on in a variety of occupations and as individual citizens. However, many capable students intending to major in STEM later switch to another field or drop out of higher education altogether, partly because of documented weaknesses in STEM teaching, learning and student supports. Improving undergraduate STEM education to address these weaknesses is a national imperative. Many initiatives are now underway to improve the quality of undergraduate STEM teaching and learning. Some focus on the national level, others involve multi-institution collaborations, and others take place on individual campuses. At present, however, policymakers and the public do not know whether these various initiatives are accomplishing their goals and leading to nationwide improvement in undergraduate STEM education. Indicators for Monitoring Undergraduate STEM Education outlines a framework and a set of indicators that document the status and quality of undergraduate STEM education at the national level over multiple years. It also indicates areas where additional research is needed in order to develop appropriate measures. This publication will

be valuable to government agencies that make investments in higher education, institutions of higher education, private funders of higher education programs, and industry stakeholders. It will also be of interest to researchers who study higher education.
