Infectious Dr John S. Tregoning, 2021-10-14 'The perfect gift for the armchair epidemiologist' Wall Street Journal Nature wants you dead. Not just you, but your children and everyone you have ever met and everyone they have ever met; in fact, everyone. It wants you to cough and sneeze and poop yourself into an early grave. It wants your blood vessels to burst and pustules to explode all over your body. And – until recently – it was really good at doing this... The subject of infection and how to fight it grows more urgent every day. How do pathogens cause disease? And what tools can we give our bodies to do battle? Infectious is not only a vital overview of what goes awry in our bodies, but also a hopeful story of ongoing human ingenuity.

Outbreaks and Epidemics Meera Senthilingam, 2020-03-18 'A book that couldn't be more timely, providing an accessible introduction to epidemiology.' Kirkus A compelling and disquieting journey through the history and science of epidemics. For centuries mankind has waged war against the infections that, left untreated, would have the power to wipe out communities, or even entire populations. Yet for all our advanced scientific knowledge, only one human disease - smallpox - has ever been eradicated globally. In recent years, outbreaks of Ebola and Zika have provided vivid examples of how difficult it is to contain an infection once it strikes, and the panic that a rapidly spreading epidemic can ignite. But while we chase the diseases we are already aware of, new ones are constantly emerging, like the coronavirus that spread across the world in 2020. At the same time, antimicrobial resistance is harnessing infections that we once knew how to control, enabling them to thrive once more. Meera Senthilingam presents a timely look at humanity's ongoing battle against infection, examining the successes and failures of the past, along with how we are confronting the challenges of today, and our chances of eradicating disease in the future.

Human Herpesviruses Ann Arvin, Gabriella Campadelli-Fiume, Edward Mocarski, Patrick S. Moore, Bernard Roizman, Richard Whitley, Koichi Yamanishi, 2007-08-16 This comprehensive account of the human herpesviruses provides an encyclopedic overview of their basic virology and clinical manifestations. This group of viruses includes human simplex type 1 and 2, Epstein-Barr virus, Kaposi's Sarcoma-associated herpesvirus, cytomegalovirus, HHV6A, 6B and 7, and varicella-zoster virus. The viral diseases and cancers they cause are significant and often recurrent. Their prevalence in the developed world accounts for a major burden of disease, and as a result there is a great deal of research into the pathophysiology of infection and immunobiology. Another important area covered within this volume concerns antiviral therapy and the development of vaccines. All these aspects are covered in depth, both scientifically and in terms of clinical guidelines for patient care. The text is illustrated generously throughout and is fully referenced to the latest research and developments.

Infection's Revenge Daron Malmborg,2013-06 Hank is mowing his lawn when a horrifying blast rocks his world. He sees a mushroom cloud rise over a distant valley and runs for shelter in his fruit cellar. In a matter of minutes, the only life Hank knows has disappeared. Nine months after the nuclear bomb explodes, resources are stretched thin as greed, fear, and self-preservation trump morals, ethics, and civilized behavior. Led by his animalistic instinct to survive, Hank becomes a nomad as he attempts to escape the hordes of undead rising in his city as well as his own conscience. With his life now reduced to eluding the relentless rotting, walking corpses and lurking diseased hiders, Hank spends his few peaceful moments battling guilt for not pursuing his dream of becoming an ordained minister. As he struggles with his fading religious beliefs and the stark reality of not knowing who he can trust, he soon realizes he is not alone in this godless existence. From within the dark shadows, a new enemy emerges that poses an even greater threat than the undead. As the world sits on the brink of nuclear war in an effort to stop a cataclysmic infection, one man embarks on a perilous journey for survival without any idea that the government may have its own plans for his future.

Infection Prevention and Control Paul Elliott,Julie Storr,Annette Jeanes,2017-12-04 This book presents a variety of perceptions of and perspectives on infection prevention and control. In doing this, the chapters will reflect upon challenging and controversial new ways of looking at infection prevention and control aimed at generating both discussion and debate as well as practical solutions. With this in mind, the book will aim not only to challenge the existing status quo but also push the frontiers of knowledge, thinking and practice where infection prevention and control is concerned. This is vital when considered in the light of cross infection rates, the number of healthcare providers who are being identified by the Care Quality Commission as falling below acceptable standards of infection prevention and control and the almost compulsive persistent non-adherent behaviours of those involved in the provision of medicine, health, social care and other disciplines related to caring with regards to the undertaking of safe and appropriate standards of infection prevention and control. There is no doubt that this book will be challenging with regards to the readers' perceptions and perspectives of infection prevention and control. Where this topic is concerned however, such a challenging approach is vital if the health, safety and well being of individuals is to be positively promoted among all those involved in the health and wellbeing of others.

Societal Self-empowerment in Germany Peter Kirsch,Hanno Kube,Reimut Zohlh fer,2023-03-10 Most recently, various groups have drawn attention to their political causes by demonstratively breaking the law, whether it is violating compulsory education in Fridays for Future demonstrations or refusing to abide by pandemic containment measures among critics of the Corona policy. This book explores what lies behind these rule-breaking events: supporters of the Fridays for Future movement, while dissatisfied with climate policy, are well integrated into the political system; people who may not abide by Corona rules, on the other hand, sometimes exhibit considerable alienation from and distrust of the political system.

Infected Scott Sigler,2008-10-14 A terrifying thriller that will crawl beneath your skin . . . and leave fresh blood on every page. "Fraught with tension . . . Invasion of the Body Snatchers meets The Hot Zone."—Rocky Mountain News Across America a mysterious disease is turning ordinary people into raving, paranoid murderers who inflict brutal horrors on strangers, themselves, and even their own families. Working under the government's shroud of secrecy, CIA operative Dew Phillips crisscrosses the country trying in vain to capture a live victim. With only decomposing corpses for clues, CDC epidemiologist Margaret Montoya races to analyze the science behind this deadly contagion. She discovers that these killers all have one thing in common—they've been contaminated by a bioengineered parasite, shaped by a complexity far beyond the limits of known science. Meanwhile Perry Dawsey—a hulking former football star now resigned to life as a cubicle-bound desk jockey—awakens one morning to find several mysterious welts growing on his body. Soon Perry finds himself acting and thinking strangely, hearing voices . . . he is infected. The fate of the human race may well depend on the bloody war Perry must wage with his own body, because the parasites want something from him, something that goes beyond mere murder.

Infection Control ,2000

Resistance Daniel Kalla,2010-04-01 No treatment. No cure. No hope Once it seemed as though penicillin and other antibiotics had won humanity a lasting victory over harmful bacteria. But now hardier bugs, resistant to most common classes of antibiotics, are emerging—with potentially catastrophic consequences. When Dr. Catalina Lopez of the Center for Disease Control first receives a report of a lethal new superbug immune to all known antibiotics, she realizes that she has a major health crisis on her hands. An ultra-resistant form of group A strep is spreading like wildfire throughout hospitals and emergency rooms in Seattle and the Pacific Northwest. Doctors, lacking any effective way to combat the infection, can do nothing but stand by and watch their patients die, one after another. Dr. Graham Kilburn, an infectious disease specialist in Vancouver, is one such doctor. Desperate to contain the spread of the new superbug, he joins forces with Lina Lopez as they try to find some way to halt the growing epidemic. What they don't realize is that shadowy forces are conspiring to spread the disease on

purpose—and they will stop at nothing to avoid exposure. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.
