John Manthey,Béla Buslig

Flavonoids in the Living System John Manthey, Béla Buslig, 2012-12-06 The presence of contaminant flavonoids in vitamin C preparations from citrus fruits initially led Szent-Gyorgyi and his collaborators to suggest that a flavonoid compound, with biological activity for the prevention of capillary fragility, was vitamin P. Later research, although not disproving biological activity, discontinued the use of the vitamin classification for these compounds. However, the ubiquitous distribution of flavonoids in living organisms, and the continued discovery of various activity in biological systems makes these compounds targets of wide ranging investigation. This volume is primarily based on a Symposium on Flavonoids and related compounds held during the 212th National Meeting of the American Chemical Society held in Orlando, Florida on August 28-29, 1996 under the sponsorship of the Division of Agricultural and Food Chemistry. While the book is not intended to be a comprehensive volume on flavonoid research, the papers provide various approaches to exploring the biological functions of flavonoids in plants and animals, their chemical modifications for enhanced activity, some analytical techniques, as well as their use in food classification. A significant portion is devoted to medicinal implications of these compounds. The organizers would like to express their appreciation to Tropicana Products, Inc., Bradenton, Florida, Coca-Cola Foods Division, Plymouth, Florida and the American Chemical Society's Division of Agricultural and Food Chemistry for financial support. Of course, the book could not be produced without the authors, whose cooperation and patience is greatly appreciated.

Iron Carriers and Iron Proteins Thomas M. Loehr, 1989

Biomolecular Structure and Dynamics G. Vergoten, T. Theophanides, 2012-12-06 Biomolecular Structure and Dynamics describes recent fundamental advances in the experimental and theoretical study of molecular dynamics and stochastic dynamic simulations, X-ray crystallography and NMR of biomolecules, the structure of proteins and its prediction, time resolved Fourier transform IR spectroscopy of biomolecules, the computation of free energy, applications of vibrational CD of nucleic acids, and solid state NMR. Further presentations include recent advances in UV resonance Raman spectroscopy of biomolecules, semiempirical MO methods, empirical force fields, quantitative studies of the structure of proteins in water by Fourier transform IR, and density functional theory. Metal-ligand interactions, DFT treatment of organometallic and biological systems, and simulation vs. X-ray and far IR experiments are also discussed in some detail. The book provides a broad perspective of the current theoretical aspects and recent experimental findings in the field of biomolecular dynamics, revealing future research trends, especially in areas where theoreticians and experimentalists could fruitfully collaborate.

Off the Beaten Track Saeeda Bano, 2020-10-07 Saeeda Bano was the first woman in India to work as a radio newsreader, known then and still as the doyenne of Urdu broadcasting. Over her unconventional and courageous life, she walked out of a suffocating marriage, witnessed the violence of Partition, lost her son for a night in a refugee camp, ate toast with Nehru and fell in love with a married man who would, in the course of their twenty-five-year relationship, become the Mayor of Delhi. Though she was born into privilege in Bhopal-the only Indian state to be ruled by women for four successive generations-her determination, independence and frankness make this a remarkable memoir and a crucial disruption in India's understanding of her own past.

Systems and Synthetic Immunology Shailza Singh, 2021-04-25 Systems and Synthetic Immunology focuses on the similarities between biology and engineering at the systems level, which are important for applying engineering theories to biology problems. With the advent of new genomic techniques, there are numerous systematic investigations underway in the scientific world. This volume highlights techniques that can be used to effectively combine two of the most essential biological fields - Systems Biology and Synthetic Immunology. The respective chapters discuss the role of synthetic immunology in biotechnology, production of biomaterials, and their use in vaccine delivery. Further topics include the importance of cytokines; the use of genomic engineering tools in immunotherapy; immunosensors; nanotherapeutics; and bioinformatics tools in biomedical applications. Given its scope, the book offers readers an up-to-date and comprehensive review of this unique and dynamic field of research.

Mechanisms of Cell Toxicity E. Edward Bittar, J. Kevin Chipman, 1997 Cellular toxicology has entered a new era. No longer are we concerned only with necrotic cell death produced by severe, acute insult (often to multiple intracellular targets) leading to disruption of the cell membrane. New advances in molecular and cellular biology are allowing the dissection of mechanisms of cell death involving more subtle targets within the cell. Toxicology has been very important, not only in understanding the mechanisms, nature, and severity of toxicity and thereby helping in risk assessment, but toxicology has also played a very important role in helping to understand basic biological processes. Historically this has perhaps been most evident in the use of toxic agents to interfere with specific reactions in the body and hence help to dissect out the mechanisms of metabolic processes. For example, the use of chemical inhibitors was very important in understanding the process of oxidative phosphorylation, or the tricarboxylic acid cycle. More recent examples are seen herein where toxicology interfaces with, for example structural biology in the study of the cytoskeletal components and their interactions. Indirectly, an understanding of the mechanisms of endogenous protective systems also improves knowledge of basic cell biology. Toxic insult and manipulation of cell signalling and control mechanisms in cell growth and differentiation also highlight how important the discipline of cell toxicity has been and will continue to be a major contributor to our understanding of basic issues in the biological and biomedical sciences. This book offers selected reviews of some of the principal molecular mechanisms of cell toxicity.

The different chapters of the book reviews a broad range of topics, including food microbiome in ecology, use of microbiome in personalized medicine, machine learning in biomedicine. The book also describes ways to harness and exploit the incredible amounts of genomic data. The book is not only limited to medicine but also caters to the needs of environmentalists, biochemical engineers etc. It will be of interest to advanced students and researchers in life sciences, computational biology, microbiology and other inter-disciplinary areas.

Pathogenicity and Drug Resistance of Human Pathogens Saif Hameed, Zeeshan Fatima, 2020-01-23 The book comprehensively discusses the mechanisms of pathogenesis and drug resistance; current diagnostics landscape of four key human pathogens; bacterial, fungal, protozoans and viral which are the causes of major infectious diseases. It also assesses the emerging technologies for the detection and quantification of these pathogens. Further, it discusses the novel opportunities to fight against these infectious diseases and to identify pertinent drug targets with novel methodologies. It also reviews the current and future insights into the control, elimination, and eradication of these infectious diseases. Importantly, the book discusses the epidemiological characteristics and various challenges in combating Ebola and Influenza diseases. Finally, the book highlights the growing role of nanotechnology and bioinformatics resources for combating the infectious diseases. In summary, the book provides the mechanistic insight of the pathogenicity, drug-resistance, therapeutic strategies and identification of the novel drug targets of Mycobacterium tuberculosis, Plasmodium, Candida, Hepatitis C and emerging viral infections.

Angelo Candalepas Adrian Curtain,Maryam Gusheh,Zachariah Matthews,2018-08-30 Angelo Candalepas: Australian Islamic Mission tells the story of the Punchbowl Mosque, a new architectural Western Sydney landmark and winner of the 2018 Sulman Medal for Public Architecture. Designed by Angelo Candalepas and Associates for the Australian Islamic Mission (AIM), the Punchbowl Mosque represents a poignant moment of collaboration across faiths and cultures. This book presents four written reflections on the mosque from faith, architectural, cultural and engineering viewpoints.In an essay on his architectural inspiration and process, Angelo Candalepas reflects on universal experiences within faith spaces, underlining that such architecture can have a phenomenological impact regardless of its religious intention or a person's beliefs. Senior Associate at Candalepas Associates, Adrian Curtin discusses the bespoke engineering required to deliver the Punchbowl Mosque. Intended as a guide for others, Curtin lays out the specific techniques used to develop the mosque's concrete set-out, including the iconic 102 quarter-spherical, concrete muqarnas.Dr Zachariah Matthews, Vice-President of AIM and the Punchbowl Mosque, speaks to the AIM's design brief and the community support for the project, which proved vital to its construction. Maryam Gusheh, Associate Professor in Architectural Studies at UNSW, approaches the mosque as a form of contemporary cultural expression. Both personal and grounded in architectural criticism, Gusheh's essay illuminates the significance of an architecturally designed mosque for the Muslim community of Sydney.Angelo Candalepas: Australian Islamic Mission is the first edition of Architecture in Detail: a series of books on the work of Candalepas Associates.
