As a Data and Telecommunications Engineer for over 15 years I've encountered almost every type of problem many people are struggling with their broadband. Content Distribution for Mobile Internet: A Cloud-based Approach Zhenhua Li, Yafei Dai, Guihai Chen, Yunhao Liu, 2023-02-14 Content distribution, i.e., distributing digital content from one node to another node or multiple

nodes, is the most fundamental function of the Internet. Since Amazon's launch of EC2 in 2006 and Apple's release of the iPhone in 2007, Internet content distribution has shown a strong trend toward polarization. On the one hand, considerable investments have been made in creating heavyweight, integrated data centers ("heavy-cloud") all over the world, in order to achieve economies of scale and high flexibility/efficiency of content distribution. On the other hand, end-user devices ("light-end") have become increasingly lightweight, mobile and heterogeneous, creating new demands concerning traffic usage, energy consumption, bandwidth, latency, reliability, and/or the security of content distribution. Based on comprehensive real-world measurements at scale, we observe that existing content distribution techniques often perform poorly under the abovementioned new circumstances. Motivated by the trend of "heavy-cloud vs. light-end," this book is dedicated to uncovering the root causes of today's mobile networking problems and designing innovative cloud-based solutions to practically address such problems. Our work has produced not only academic papers published in prestigious conference proceedings like SIGCOMM, NSDI, MobiCom and MobiSys, but also concrete effects on industrial systems such as Xiaomi Mobile, MIUI OS, Tencent App Store, Baidu PhoneGuard, and WiFi.com. A series of practical takeaways and easy-to-follow testimonials are provided to researchers and practitioners working in mobile networking and cloud computing. In addition, we have released as much code and data used in our research as possible to benefit the community.

Access Network Speed Tests Organisation for Economic Co-operation and Development, 2014 This report examines the approaches being taken to measure broadband performance by reviewing information on official speed tests to date as well as their strengths and drawbacks in methodologies, emerging good practices and the challenges in undertaking a harmonised approach across OECD countries. Measurement projects for Internet connection performance face greater potential hurdles than for traditional telecommunication networks, while at the same time, new opportunities are emerging in terms of crowd-sourced data collected through applications installed by users. The report provides classification of those measurement approaches with suggestions on how they can be selected and implemented depending on different policy goals.
