Likewise, when your existing coding habits lead you to a syntax or conceptual 'gotcha,' the text points that out, too. This book provides you with fast-track coverage of all the most important elements of the Silverlight 4 technology ranging from XAML to standard controls, from dealing with media to networking, from testing to deployment. It also reveals features introduced with Silverlight 4 and offers guidance on how to best utilize them. It is assumed that readers are already be comfortable with the workings of the .NET framework. Knowledge of Expression Blend is useful, but not mandatory: you'll learn the Blend techniques that you need to know as you go through the book. By the end, you will have followed a sound, concise path to mastery of Silverlight 4.

  Next-Generation Business Intelligence Software with Silverlight 3 Bart Czernicki,2011-02-02 Business intelligence (BI) software is the code and tools that allow you to view different components of a business using a single visual platform, making comprehending mountains of data easier. Applications that include reports, analytics, statistics, and historical and predictive modeling are all examples of BI applications. Currently, we are in the second generation of BI software, called BI 2.0. This generation is focused on writing BI software that is predictive, adaptive, simple, and interactive. As computers and software have evolved, more data can be presented to end users with increasingly visually rich techniques. Rich Internet application (RIA) technologies such as Microsoft Silverlight can be used to transform traditional user interfaces filled with boring data into fully interactive analytical applications to deliver insight from large data sets quickly. Furthermore, RIAs include 3D spatial design capabilities that allow for interesting layouts of aggregated data beyond a simple list or grid. BI 2.0 implemented via RIA technology can truly bring out the power of BI and deliver it to an average user via the Web. Next-Generation Business
