A Theory of Race Joshua Glasgow,2010-08-18 Social commentators have long asked whether racial categories should be conserved or eliminated from our practices, discourse, institutions, and perhaps even private thoughts. In *A Theory of Race*, Joshua Glasgow argues that this set of choices unnecessarily presents us with too few options. Using both traditional philosophical tools and recent psychological research to investigate folk understandings of race, Glasgow argues that, as ordinarily conceived, race is an illusion. However, our pressing need to speak to and make sense of social life requires that we employ something like racial discourse. These competing pressures, Glasgow maintains, ultimately require us to stop conceptualizing race as something biological, and instead understand it as an entirely social phenomenon.

Racing under the Illusion of Grandeur: A Guide for Men and Women over Forty Who Want to Drive like Mario Russ Rosenberg,2018-08-17 In 2006, a nearly fifty-year-old Russ Rosenberg had an epiphany. For years, he had been searching for a hobby that would hold his interest. After trying Guitar lessons, shooting sports and fly fishing, Russ tapped into his lifelong passion for cool cars. A short time later, he bought a used Miata, signed up for autocross school, and eventually began road racing. In a comprehensive guide, Russ relies on his experiences as an amateur racer to provide a roadmap for beginner racers that offers time-tested wisdom on how to start in the sport, avoid costly mistakes, and secure a logical path to success. He includes valuable insight into how to choose the right car and the true cost of racing as well as entertaining racing stories for the over-forty crowd, photos, resources, and an honest opinion on the sport from his wife, Lisa. ... A must read for anyone who is considering getting involved in racing ... -Tony Parella, CEO, Sportscar Vintage Racing Association

Racing for the Surface Bingyun Li,Thomas Fintan Moriarty,Thomas Webster,Malcolm Xing,2020-02-28 This book covers the key basics of tissue engineering as well as the latest advances in the integration of both antimicrobial and osteoinductive properties. Topics covered include osteoconductive and osteoinductive biomaterials (calcium phosphate, bone morphogenetic protein, peptides, antibodies, bioactive glasses, nanomaterials, etc.) and scaffolds. Research integrating both antimicrobial/biofilm-inhibiting and osteoinductive/osteoconductive properties and their co-delivery is detailed and their roles in clinical success are discussed. Combined with its companion volume, *Racing for the Surface: Antimicrobial and Interface Tissue Engineering*, this book bridges the gap between infection and tissue engineering, and is an ideal book for academic researchers, clinicians, industrial engineers and scientists, governmental representatives in national laboratories, and advanced undergraduate students and post-doctoral fellows who are interested in tissue engineering and regeneration, infection, and biomaterials and devices.

Racing Toward Zero Kelly Senecal,Felix Leach,2021-06-01 In *Racing Toward Zero*, the authors explore the issues inherent in developing sustainable transportation. They review the types of propulsion systems and vehicle options, discuss low-carbon fuels and alternative energy sources, and examine the role of regulation in curbing emissions. All technologies have an impact on the environment, from internal combustion engine vehicles to battery electric vehicles, fuel cell electric vehicles, and hybrids-there is no silver bullet. The battery electric vehicle may seem the obvious path to a sustainable, carbon-free transportation future, but it's not the only, nor necessarily the best, path forward. The vast majority of vehicles today use the internal combustion engine (ICE), and this is unlikely to change anytime soon. Improving the ICE and its fuels-entering a new ICE age-must be a main route on the road to zero emissions. How do we go green? The future requires a balanced approach to transportation. It's not a matter of choosing between combustion or electrification; it's combustion and electrification. As the authors say, The future is eclectic. By harnessing the best qualities of both technologies, we will be in the best position to address our transportation future as quickly as possible. Race and the Politics of the Exception Utz McKnight,2013-07-04 The traditional assumption today about race is that it is not political; that it has no political content and is a matter of individual beliefs and attitudes. In *Race and the Politics of the Exception*, Utz McKnight argues that race is in fact political and defines how it functions as a politics in the United States. McKnight organizes his book into three sections, beginning with a theoretical section about racial politics in the United States. Using theorists such as Benjamin, Agamben, and Schmitt, McKnight discusses how the idea of racial communities went from being constituted through

the idea of racial sovereignty and a politics of the exception that defined blacks as the internal enemy, to being constitutionally defined through the institutions of racial equal opportunity. In the second section, McKnight further develops his critical race theory by exploring in more detail the social use of race today. The election of President Obama has brought the politics of racial equality to a critical point. In spite of a very powerful set of political tools to define it as a thing of the past, race matters. In the final section, McKnight engages with important African American fiction from each of the three major periods of racial politics in the US. Earlier descriptions of political theory are used throughout these analyses to refine the argument for a new critical politics of race. Scholars of political theory, identity politics, African American studies, and American Studies will find this work ground-breaking and relevant.

Amazing Racers Marc Bloom, 2019-08-06 What would one call taking teens with no evident running talent and putting them through breakneck training combined with mantras from the rock n' roll, techniques from Kenya, philosophy from Australia and turning them champions? Is it revolutionary? Or just plain crazy? Bill Aris has heard both, but one thing is indisputable. Everything Aris does with his runners—male and female—is new and extraordinary, and he has created a new American running dynasty. The runners of Fayetteville-Manlius High School, or F-M, have won the last nine out of ten national championships and have the best cumulative record in cross country history. F-M's domination has shocked the sport for its defiance of accepted running principles and limitations. One year, the girls defeated the 2nd-place team in the country by an average of 59 seconds per girl in a 5k race. Another year, the F-M girls' ran faster than their Kenyan counterparts, who had come to Oregon as a showcase. Across the country, top coaches all whisper, "How do they do it?" From adopting long-forgotten Spartan creeds to focusing on teenaged developmental psychology and gender-blindness in training, *The Running Revolutionaries* is a must read for millions of runners and the millions more who strive for better performance.
