The Morgan Stanley and d&a European Technology Atlas 2005 ,

Trinity Broken Jamie Craig,2019-11-09 Scientist Joshua Ames committed the unforgivable sin. He fell in love with his research subjects, shapeshifters Cameron and Sara. Despite the taboo against humans mingling with shifters, Josh left his life behind and moved into theirs without regret. Then Sara disappeared. When Josh and Cam finally find her, she is unconscious, emaciated, and shackled. They thought the hard part was living without her. But as soon as Sara wakes, they realize putting their lives back together is even more difficult. Sara barely remembers life with Cam and Josh. Conditioned to fear her own abilities, she struggles to start over. The key to her recovery is solving the mystery behind the kidnapping, but whoever destroyed their relationship is hunting her, intent on getting her back. The truth could bring the three lovers peace ... or send them spiraling apart.

Hardware for Soft Computing and Soft Computing for Hardware Nadia Nedjah,Luiza de Macedo Mourelle,2013-11-18 Single and Multi-Objective Evolutionary Computation (MOEA), Genetic Algorithms (GAs), Artificial Neural Networks (ANNs), Fuzzy Controllers (FCs), Particle Swarm Optimization (PSO) and Ant colony Optimization (ACO) are becoming omnipresent in almost every intelligent system design. Unfortunately, the application of the majority of these techniques is complex and so requires a huge computational effort to yield useful and practical results. Therefore, dedicated hardware for evolutionary, neural and fuzzy computation is a key issue for designers. With the spread of reconfigurable hardware such as FPGAs, digital as well as analog hardware implementations of such computation become cost-effective. The idea behind this book is to offer a variety of hardware designs for soft computing techniques that can be embedded in any final product. Also, to introduce the successful application of soft computing technique to solve many hard problems encountered during the design of embedded hardware designs. Reconfigurable embedded designs for GAs, ANNs, FCs and PSO are presented and evaluated. Also, the application of quantum-based evolutionary computation and multi-objective evolutionary computation as well as ACO are applied to solve hard problems related to circuit synthesis, IP assignment, mapping and routing of applications on Network-

On-Chip infrastructures.

Harnessing VLSI System Design with EDA Tools Rajanish K. Kamat,Santosh A. Shinde,Pawan K. Gaikwad,Hansraj Guhilot,2011-10-03 With the proliferation of VHDL, the reference material also grew in the same order. Today there is good amount of scholarly literature including many books describing various aspects of VHDL. However, an indepth review of these books reveals a different story. Many of them have emerged simply as an improved version of the manual. While some of them deal with the system design issues, they lack appropriate exemplifying to illustrate the concepts. Others give large number of examples, but lack the VLSI system design issues. In nutshell, the fact which gone unnoticed by most of the books, is the growth of the VLSI is not merely due to the language itself, but more due to the development of large number of third party tools useful from the FPGA or semicustom ASIC realization point of view. In the proposed book, the authors have synergized the VHDL programming with appropriate EDA tools so as to present a full proof system design to the readers. In this book along with the VHDL coding issues, the simulation and synthesis with the various toolsets enables the potential reader to visualize the final design. The VHDL design codes have been synthesized using different third party tools such as Xilinx Web pack Ver.11, Modelsim PE, Leonrado Spectrum and Synplify Pro. Mixed flow illustrated by using the above mentioned tools presents an insight to optimize the design with reference to the spatial, temporal and power metrics.
