Rat Pack Confidential Shawn Levy,1999-09-17 For the first time, the full story of what happened when Frank brought his best pals to party in a land called Vegas January 1960. Las Vegas is at its smooth, cool peak. The Strip is a jet-age theme park, and the greatest singer in the history of American popular music summons a group of friends there to make a movie. One is an insouciant singer of Italian songs, ex-partner to the most popular film comedian of the day. One is a short, black, Jewish, one-eyed, singing, dancing wonder. One is an upper-crust British pretty boy turned degenerate B-movie star actor, brother-in-law to an ascendant politician. And one is a stiff-shouldered comic with the quintessential Borscht Belt emcee's knack for needling one-liners. The architectonically sleek marquee of the Sands Hotel announces their presence simply by listing their names: FRANK SINATRA. DEAN MARTIN. SAMMY DAVIS, JR. PETER LAWFORD. JOEY BISHOP. Around them an entire cast gathers: actors, comics, singers, songwriters, gangsters, politicians, and women, as well as thousands of starstruck everyday folks who fork over pocketfuls of money for the privilege of basking in their presence. They call themselves The Clan. But to an awed world, they are known as The Rat Pack. They had it all. Fame. Gorgeous women. A fabulouse playground of a city and all the money in the world. The backing of fearsome crime lords and the blessing of the President of the United States. But the dark side—over the thin line between pleasure and debauchery, between swinging self-confidence and brutal arrogance—took its toll. In four years, their great ride was over, and showbiz was never the same. Acclaimed Jerry Lewis biographer Shawn Levy has written a dazzling portrait of a time when neon brightness cast sordid shadows. It was Frank's World, and we just lived in it.

Sleeping in Eden Nicole Baart,2013-05-21 The lives of a middle-aged doctor and a love-struck young woman intersect across time in Sleeping in Eden, Nicole Baart's haunting novel about love, jealousy, and the boundaries between loyalty and truth. She knew what he wrote . . . One little word that made her feel both cheated and beloved. One word that changed everything. MINE. On a chilly morning in the Northwest Iowa town of Blackhawk, Dr. Lucas Hudson is filling in for the vacationing coroner on a seemingly open-and-shut suicide case. His own life is crumbling around him, but when he unearths the body of a woman buried in the barn floor beneath the hanging corpse, he realizes this terrible discovery could change everything. . . . Years before Lucas ever set foot in Blackhawk, Meg Painter met Dylan Reid. It was the summer before high school and the two quickly became inseparable. Although Meg's older neighbor, Jess, was the safe choice, she couldn't let go of Dylan no matter how hard she tried. Caught in a web of jealousy and deceit that spiraled out of control, Meg's choices in the past ultimately collide with Lucas's discovery in the present, weaving together a taut story of unspoken secrets and the raw, complex passions of innocence lost.

Permutation City Greg Egan,1994-04-26 Paul Durham keeps making Copies of himself: software simulations of his own brain and body which can be run in virtual reality, albeit seventeen times more slowly than real time. He wants them to be his guinea pigs for a set of experiments about the nature of artificial intelligence, time, and causality, but they keep changing their mind and baling out on him, shutting themselves down. Maria Deluca is an Autoverse addict; she’s unemployed and running out of money, but she can’t stop wasting her time playing around with the cellular automaton known as the Autoverse, a virtual world that follows a simple set of mathematical rules as its “laws of physics”. Paul makes Maria a very strange offer: he asks her to design a seed for an entire virtual biosphere able to exist inside the Autoverse, modelled right down to the molecular level. The job will pay well, and will allow her to indulge her obsession. There has to be a catch, though, because such a seed would be useless without a simulation of the Autoverse large enough to allow the resulting biosphere to grow and flourish — a feat far beyond the capacity of all the computers in the world.
