Intelligence in the United States John B. Miner,1957 Dr. Miner's study of intelligence testing and the concept of intelligence appears at a time when the validity of existing standards is being challenged. The book gives substance to the growing debate; it also reviews the status of contemporary investigations of intelligence and provides a bibliography of the literature since 1940. The theory of intelligence, as formulated by the author, postulates that native intelligence depends for its development on the availability of learning opportunities and on individual motivation. The theory is employed in a nationwide survey of a representative sample of the U.S. population; methods of public opinion research were used in administration the intelligence test, a brief but highly reliable measure of verbal ability. The 1500 persons tested march the U.S. population aged ten and over. The author investigated the significance of their intelligence scores in relation to education, sex, marital status, age, race, occupation, geographical area, religion, class identification and city size. An original contribution of the book is the formulation of models of the educational system and occupational structure that permit detailed estimates of the extent to which intellectual resources are being wasted in this country. Suggestions for full use of these resources are made throughout the book and, especially, in the concluding chapter -- Dust jacket.

A Lifetime of Intelligence Ian J. Deary,Lawrence J. Whalley,John M. Starr,2009 In two landmark and world-famous studies, over 150,000 eleven-year-olds participated in Scottish national intelligence tests, known as the Scottish Mental Surveys, which are the only studies to date to test an entire population. Over the past 10 years, Ian J. Deary, Lawrence J. Whalley, and John M. Starr have conducted follow-up studies with many of these now elderly participants. Using the latest testing assessments and technology, they have further investigated the roles of biological and sociobehavioral factors in cognitive aging. This book is important to many fields and will surely become the source to consult on anything related to IQ and its effects on cognitive aging and physical longevity. It captures a lifetime of intelligence, from childhood to about age 80, and also explores general matters of intelligence. Does having a high childhood IQ affect one's likelihood of being ill later in life or surviving to old age? Does it affect happiness later in life? Does being a twin affect childhood intelligence? These questions and more are explored in depth in this book.--BOOK JACKET.

Basic Elements of Survey Research in Education Ulemu Luhanga,Allen G. Harbaugh,2021-09-01 In this first book of the series Survey Methods in Educational Research, we have brought together leading authors and scholars in the field to discuss key introductory concepts in the creation, implementation, evaluation and dissemination of survey instruments and their resultant findings. While there are other textbooks that might introduce these concepts adequately well, the authors here have focused on the pragmatic issues that inevitably arise in the development and administration process of survey instruments. Drawing from their rich experiences, the authors present these potential speed bumps or road blocks a survey researcher in education or the social sciences might encounter. Referencing their own work and practice, the authors provide valuable suggestions for dealing with these issues "your advisor never told you about." And all of the recommendations are aligned with standard protocols and current research on best practices in the field of research methodology. This book is broken into four broad units on creating survey items and instruments, administering surveys, analyzing the data from surveys, and stories of successful administrations modeling the entire research cycle. Each chapter focuses on a different concept in the survey research process, and the authors share their approaches to addressing the issues. These topics include survey item construction, scale development, cognitive interviewing, measuring change with self-report data, translation issues with surveys administered in multiple languages, working with school and program administrators when implementing surveys, a review of current software used in survey research, the use of weights, response styles, assessing validity of results, and effectively communicating your results and findings ... and much more. The intended audience of the volume will be practitioners, administrators, teachers as researchers, graduate students, social science and education researchers not experienced in survey research, and students learning program evaluation. In brief, if you are considering doing survey research, this book is meant for you.
