Salt, Sweat, Tears Adam Rackley,2014-09-30 A riveting first-person account and history of rowers who have attempted to navigate across the Atlantic More people have climbed Mount Everest than have rowed across the Atlantic. For more than seventy days, Adam Rackley and his rowing partner ate, slept and rowed in a boat seven meters long by two meters wide, in one of the world's most extreme environments. This is his story of adventure, endurance, and self-discovery. They were following in the wake of pioneers. In 1896 George Harbo and Frank Samuelsen, a pair of Norwegian fisherman, crossed the 2,500 miles in a wooden fishing dory--and their record stood for 114 years. John Fairfax, a smuggler, a gambler, and a shark hunter, was the first to complete the feat singlehandedly in 1969. Others have followed; some have not survived the attempt. This is their story, too.

Providing a foundation for the two key qualities—the analytical mindset and a basic understanding of the analytical instrumentation—this book helps prepare individuals for success on the job. Chapters cover sample preparation; gravimetric analysis; titrimetric analysis; instrumental analysis; spectrochemical methods, such as atomic spectroscopy and UV-Vis and IR molecular spectrometry; chromatographic techniques, including gas chromatography and high-performance liquid chromatography; electroanalytical methods; and more. Incorporating an additional ten years of teaching experience since the publication of the third edition, the author has made significant updates and enhancements to the fourth edition. More than 150 new photographs and either new or reworked drawings spanning every chapter to assist the visual learner A new chapter on mass spectrometry, covering GC-MS, LC-MS, LC-MS-MS, and ICP-MS Thirteen new laboratory experiments An introductory section before chapter 1 to give students a preview of general laboratory considerations, safety, laboratory notebooks, and instrumental analysis Additional end-of-chapter problems, expanded report-type questions, and inclusion of relevant section headings in the Questions and Problems sections Application Notes in each chapter An appendix providing a glossary of quality assurance and good laboratory practice (GLP) terms

Solar Cell Device Physics Stephen Fonash,2012-12-02 Solar Cell Device Physics offers a balanced, in-depth qualitative and quantitative treatment of the physical principles and operating characteristics of solar cell devices. Topics covered include photovoltaic energy conversion and solar cell materials and structures, along with homojunction solar cells. Semiconductor-semiconductor heterojunction cells and surface-barrier solar cells are also discussed. This book consists of six chapters and begins by introducing the reader to the basic physical principles and materials properties that are the foundations of photovoltaic energy conversion, with emphasis on various photovoltaic devices capable of efficiently converting solar energy into usable electrical energy. The electronic and optical properties of crystalline, polycrystalline, and amorphous materials with both organic and inorganic materials are considered, together with the manner in which these properties change from one material class to another and the implications of such changes for photovoltaics. Generation, recombination, and bulk transport are also discussed. The two mechanisms of photocarrier collection in solar cells, drift and diffusion, are then compared. The remaining chapters focus on specific solar cell device classes defined in terms of the interface structure employed: homojunctions, semiconductor-semiconductor heterojunctions, and surface-barrier devices. This monograph is appropriate for use as a textbook for graduate students in engineering and the sciences and for seniors in electrical engineering and applied physics, as well as a reference book for those actively involved in solar cell research and development.

Big nothings.I know what I am.Mal lives on the fringes of high school. Angry. Misunderstood. Yet loving the world -- or, at least, an idea of the world. Then he meets Hooper. Who says he's from another planet. And may be going home very soon.

Assyrian Echoes of the Word Thomas Laurie,2020-11-30 This volume does not claim to march in the front ranks of Assyrian scholars. The writer has not excavated mounds hitherto unknown, and interpreted the tablets he found there... His has been the humbler aim of making a larger number acquainted with the work that has been done, and with

some at least of the results obtained. He has sought to gather up the fragments, that nothing be lost; so that humble believers who have been startled by the noise of the battle now raging round the Word may have their hearts reassured by the corroborations of the truth that lie stored up in every ancient mound and are brought to light by the pick of the explorer.

Cooperative Information Agents VII Matthias Klusch, Sascha Ossowski, Andrea Omicini, Heimo Laamanen, 2003-09-09 These are the proceedings of the 7th International Workshop on Cooperative Information Agents (CIA 2003), held at the Sonera Conference Center in H- sinki, Finland, August 27-29, 2003. It was co-located with the 4th Agentcities Information Days. One key challenge of developing advanced agent-based information systems is to balance the autonomy of networked data and knowledge sources with the potential payoff of leveraging them by the appropriate use of intelligent information agents on the Internet. An information agent is a computational software entity that has access to one or multiple, heterogeneous, and distributed data and information sources; proactively searches for and maintains relevant information on behalf of its human users or other agents, preferably just-in-time. In other words, it is managing and overcoming the difficulties associated with information overload in the open and exponentially growing Internet and Web. Depending on the application and tasks at hand information agents may collaborate in open, networked data and information environments to provide added value to a variety of applications in different domains. Thus, research and development of information agents is inherently interdisciplinary: It requires expertise in information retrieval, artificial intelligence, database systems, human-computer interaction, and Internet and Web technology. Initiated in 1997, the purpose of the annual international workshop series on cooperative information agents (CIA) is to provide an interdisciplinary forum for researchers, software developers, and managers to get informed about, present, and discuss the latest high-quality results in advancements of theory and practice in information agent technology for the Internet and Web. Each event of this renowned series attempts to capture the intrinsic interdisciplinary nature of this research area by calling for contributions from different research communities, and by promoting open and informative discussions on all related topics.
