High-Risk IV Medications in Special Patient Populations Sandra Kane-Gill, Joseph Dasta, 2011-06-27 Critical Care Clinicians can use general drug references (Micromedex, Lexicomp) for data on dosing of high-alert medications in special patient populations but these references are not available to all healthcare clinicians, they are expensive and they are not specific to high-alert medications or critically ill patients. Doctors, nurses and pharmacists in the hospital setting will benefit from having one resource with all of this information. The purpose of this reference manual would be to guide critical care clinicians on dosing of high-alert medications in special patient populations. The most important feature of the book will be a summary of primary literature using tables when possible. This will be useful to readers because currently a reference book does not exist that guides clinicians in these difficult dosing decisions.

Atherosclerosis IV G. Schettler, Y. Goto, Y. Hata, G. Klose, 2012-12-06 The presence of monotypism in thick atherosclerotic lesions of black females with G-6-PD mosaicism first reported by the Benditts (1973) has been confirmed in two other laboratories. However, we believe that it is premature to conclude that the finding of monotypism necessarily indicates monoclonal origin of atherosclerotic lesions. We have suggested two alternative explanations for the observation of monotypism which we believe must be shown to be invalid before accepting monoclonal origin as the only plausible way to account for the observed G-6-PD monotypism. One of these two alternatives relates to clonal heterogeneity of cell growth potential, i. e. , during the course of progressive growth of a lesion, progeny of one cell may overgrow all others in a portion of the lesion. The other alternative is that one of the G-6-PD alleles may be linked to genes that afford a preferential survival characteristic in the abnormal environment present in atherosclerotic lesions. Thus, cells with one allele may be able to grow better than cells with the other allele, and this characteristic may be unrelated to A-ness or B-ness. We have studied initiation of lesions in He diet-fed swine and demonstrated that all active lesions that were studied were of multiple cell origin (not monoclonal). We have studied cell growth patterns in developing atherosclerotic lesions in He diet-fed swine and found evidence consistent with clonal heterogeneity in growth potential of lesion cells.

Intravenous Infusion Therapy for Medical Assistants Dianne L. Josephson, Nina Beaman, 2006 This essential publication focuses on what the CMA needs to know about intravenous infusion therapy. Infusion or IV therapy has long been part of the acute care of patients. However, more patients are receiving IV therapy at home, in emergency centers, at infusion centers, and in dialysis clinics. Thus, CMAs often need to understand IV therapy to lay out the equipment, to monitor the patient, to assess the infusion site, to discontinue the infusion, and perhaps even to insert the IV. The purpose of this book is to help you understand the theory of IV therapy. With patient safety in mind, risks, complications, and adverse reactions are discussed in Intravenous Infusion Therapy for Medical Assistants. Giving the correct medication is crucial to the CMA, so intravenous infusion preparations are compared and contrasted. Sidebars of Medical Assisting Alerts and Tips are distributed throughout the text to highlight key safety concerns and professional issues. Each chapter concludes with Review Questions and Activities to ensure that learning objectives have been met.
