Fostering freedom online: the role of Internet intermediaries MacKinnon, Rebecca, Hickok, Elonnai, Bar, Allon, Lim, Hae-in, 2015-01-29 Internet intermediaries play a unique role in linking authors of content and audiences. They may either protect or jeopardize end user rights to free expression, given their role in capturing, storing, searching, sharing, transferring and processing large amount of information, data and user-generated content. This research aims to identify principles for good practices and processes that are consistent with international standards for free expression that Internet intermediaries may follow in order to protect the human rights of end users online.

Siberian Shadows I. W. I.W. Zilke, 2017-12-05 A collection of 3 short stories inspired by true events in Siberia during the last century. These stories, directly taken from I. W. Zilke's immediate family history, present a special world in a gripping and unforgettable manner. With an unflinching insight into the dark depths of the human soul, the author portrays the entire palette of human suffering through an inverted mirror: from cannibalism as an act of courage (in *Tabula Rasa*) to a rapist with an honourable heart (in *Emma*), and a stuttering child who overcomes his predicament for the first time in an act of violence (in *Feathers*). And while all of the stories are set in Siberia, they encompass the full human experience and due to Zilke's eye for detail, like a surgeon's knife, they can hit closer to home than expected. The 3 stories are brought to life by powerful artistic visions. All drawn by hand, the 9 illustrations complete the collection and create a unique literary treasure. (About 4900 words)

Love and Other Casualties I. W. I.W. Zilke, 2017-12-14 A collection of poems about love and other casualties, written over the course of three years. The table of contents and the page numbers have been omitted intentionally - the book is meant to be opened randomly. Perhaps the reader's current mood will thus resonate more truthfully with the poem that his or her fingers find in the book. We recommend looking closely at the illustrations for all of them have been drawn in under a minute to prevent any overthinking of the mind - the essence of the poems has thus been extracted. (16 poems with 16 illustrations)

Modern Trends in Cartography Jan Brus, Alena Vondrakova, Vit Vozenilek, 2014-12-02 The fast exchange of information and knowledge are the essential conditions for successful and effective research and practical applications in cartography. For successful research development, it is necessary to follow trends not only in this domain, but also try to adapt new trends and technologies from other areas. Trends in cartography are also quite often topics of many conferences which have the main aim to link research, education and application experts in cartography and GIS&T into one large platform. Such the right place for exchange and sharing of knowledge and skills was also the CARTOCON2014 conference, which took place in Olomouc, Czech Republic, in February 2014 and this book is a compilation of the best and most interesting contributions. The book content consists of four parts. The first part New approaches in map and atlas making collects studies about innovative ways in map production and atlases compilation. Following part of the book Progress in web cartography brings examples and tools for web map presentation. The third part Advanced methods in map use includes achievement of eye-tracking research and users' issues. The final part Cartography in practice and research is a clear evidence that cartography and maps played the significant role in many geosciences and in many branches of the society. Each individual paper is original and has its place in cartography.

Multiplex and Multilevel Networks Stefano Battiston, Guido Caldarelli, Antonios Garas, 2018-10-18 The science of networks represented a substantial change in the way we see natural and technological phenomena. Now we have a better understanding that networks are, in most cases, networks of networks or multi-layered networks. This book provides a summary of the research done during one of the largest and most multidisciplinary projects in network science and complex systems (Multiplex). The science of complex networks originated from the empirical evidence that most of the structures of systems such as the internet, sets of protein interactions, and collaboration between people, share (at least qualitatively) common structural properties. This book examines how properties of networks that interact with other networks can change dramatically. The authors show that, dependent on the properties of links that interconnect two or more networks, we may derive different conclusions about the function and the possible vulnerabilities of the overall system of networks. This book presents a series of novel theoretical results together with their applications, providing a comprehensive overview of the field.

Social Media and Emerging Economies Manlio Del Giudice, Maria Rosaria Della Peruta, Elias G. Carayannis, 2013-10-22 How have social media in emerging economies evolved differently from the rest of the world? According to studies and anecdotal evidence, innovations in the use of social media tools occur more frequently in emerging economies than they do in developed markets. The aim of this volume is to show that in emerging regions (such as China, India, and South America) where the participation of stakeholders in the circuit of social media is more active (i.e., greater frequency of contacts and creativity in the elaboration of contents), organizations not only are involved in a set of exchange relations with other social actors but are also embedded in a network of dynamic relationships. The authors

utilize social network analysis to determine how entrepreneurs in emerging economies identify their most beneficial social contacts and use those contacts to leverage the resources needed for their enterprises, revealing new insights on the process of business creation and economic development in the networked age.
