The Archaeology of Hybrid Material Culture Jeb J. Card, 2013-10-22 In recent years, archaeologists have used the terms hybrid and hybridity with increasing frequency to describe and interpret forms of material culture. Hybridity is a way of viewing culture and human action that addresses the issue of power differentials between peoples and cultures. This approach suggests that cultures are not discrete pure entities but rather are continuously transforming and recombining. The Archaeology of Hybrid Material Culture discusses this concept and its relationship to archaeological classification and the emergence of new ethnic group identities. This collection of essays provides readers with theoretical and concrete tools for investigating objects and architecture with discernible multiple influences. The twenty-one essays are organized into four parts: ceramic change in colonial Latin America and the Caribbean; ethnicity and material culture in pre-Hispanic and colonial Latin America; culture contact and transformation in technological style; and materiality and identity. The media examined include ceramics, stone and glass implements, textiles, bone, architecture, and mortuary and bioarchaeological artifacts from North, South, and Central America, Hawai'i, the Caribbean, Europe, and Mesopotamia. Case studies include Bronze Age Britain, Iron Age and Roman Europe, Uruk-era Turkey, African diasporic communities in the Caribbean, pre-Spanish and Pueblo revolt era Southwest, Spanish colonial impacts in the American Southeast, Central America, and the Andes, ethnographic Amazonia, historic-era New England and the Plains, the Classic Maya, nineteenth-century Hawai'i, and Upper Paleolithic Europe. The volume is carefully detailed with more than forty maps and figures and over twenty tables. The work presented in The Archaeology of Hybrid Material Culture comes from researchers whose questions and investigations recognized the role of multiple influences on the people and material they study. Case studies include experiments in bone working in middle Missouri; images and social relationships in prehistoric and Roman Europe; technological and material hybridity in colonial Peruvian textiles; ceramic change in colonial Latin America and the Caribbean; and flaked glass tools from the leprosarium at Kalawao, Moloka'i. The essays provide examples and approaches that may serve as a guide for other researchers dealing with similar issues.

Health Promotion in Health Care - Vital Theories and Research Gørill Haugan, Monica Eriksson, 2021-03-11 This open access textbook represents a vital contribution to global health education, offering insights into health promotion as part of patient care for bachelor's and master's students in health care (nurses, occupational therapists, physiotherapists, radiotherapists, social care workers etc.) as well as health care professionals, and providing an overview of the field of health science and health promotion for PhD students and researchers. Written by leading experts from seven countries in Europe, America, Africa and Asia, it first discusses the theory of health promotion and vital concepts. It then presents updated evidence-based health promotion approaches in different populations (people with chronic diseases, cancer, heart failure, dementia, mental disorders, long-term ICU patients, elderly individuals, families with newborn babies, palliative care patients) and examines different health promotion approaches integrated into primary care services. This edited scientific anthology provides much-needed knowledge, translating research into guidelines for practice. Today's medical approaches are highly developed; however, patients are human beings with a wholeness of body-mind-spirit. As such, providing high-quality and effective health care requires a holistic physical-psychological-social-spiritual model of health care is required. A great number of patients, both in hospitals and in primary health care, suffer from the lack of a holistic oriented health approach: Their condition is treated, but they feel scared, helpless and lonely. Health promotion focuses on improving people's health in spite of illnesses. Accordingly, health care that supports/promotes patients' health by identifying their health resources will result in better patient outcomes: shorter hospital stays, less re-hospitalization, being better able to cope at home and improved well-being, which in turn lead to lower health-care costs. This scientific anthology is the first of its kind, in that it connects health promotion with the salutogenic theory of health throughout the

chapters. the authors here expand the understanding of health promotion beyond health protection and disease prevention. The book focuses on describing and explaining salutogenesis as an umbrella concept, not only as the key concept of sense of coherence.
