Local Players in Global Games Peer Hull Kristensen, Jonathan Zeitlin, 2004-09-30 What happens when previously autonomous firms from different countries, each with their own identities, routines, and capabilities, come together inside a single multinational corporation? Can a cooperative strategy be established that advances the development of the multinational as a whole, or do mutual misunderstandings and the unintended consequences of strategic interaction among the players lead instead to endemic conflict and disintegration? This book tackles these novel and important questions through an empirical study of the strategic constitution of an 'actually existing' multinational. It does so by tracing the historical construction of the multinational corporation from the confluence of multiple

formerly independent firms and analyzing the interacting web of strategies pursued by different actors within it. The analysis reveals how workers, unionists, subsidiary managers, and corporate executives pursue separate strategic games rooted in their local contexts, whose global outcome contrasts sharply with idealized views of the multinational as an integrated and coordinated organization. By comparing these findings to those of the broader literature, the book proceeds to a theoretical examination of the challenges of managing the multinational, and the difficulties of resolving them through conventional organizational means. The authors propose new procedural solutions aimed at fostering mutual recognition and knowledge exchange within the multinational corporation, and explore how a multinational public may be created to press for the necessary reforms in corporate governance. As the success of such reforms is far from preordained, the book concludes with a series of alternative scenarios that illustrate the many obstacles to a smooth continuation of the globalization process. This is an important and original study of significance for researchers, academics, and advanced students of international business, business strategy, economics, organizational studies, economic sociology,

economic geography, and international political economy.

Rio, Tokyo Paralympic Games and beyond: How to Prepare Athletes with Motor Disabilities for Peaking Pierre-Marie Leprêtre, Victoria L. Goosey-Tolfrey, Thomas W. J. Janssen, Claudio Perret, 2017-05-25 In 1960, the 9th Annual International Stoke Mandeville Games were supported, for the first time, by the Italian Olympic Committee. Taking place six days after the Closing Ceremony of the XVII Olympic Games, the paralympic games for disabled athletes were born. From Roma in 1960 to London in 2012, the Paralympic Games grew in terms of athletes' number from 400 to 4,237, and now brings together more than 164 nations (Perret, 2015). The word "Paralympic" derives from the Greek preposition "para" (beside or alongside) and the word "Olympic". Paralympics want to be the parallel Games to the Olympics and illustrate how the two movements exist side-by-side (Paralympics

– History of the Movement, 2016). Now taking place after the Olympics Games, the Paralympic Games are the pinnacle of the career of athletes with physical impairments and have become the second largest sport event in the world (Perret, 2015; Paralympics – History of the Movement, 2016; Gold and Gold, 2011). The first statement of the vision of the International Paralympic Committee (IPC), i.e. “to create the conditions for athlete empowerment through self-determination” (Paralympics – History of the Movement, 2016; International Paralympic Committee, 2016), shows the importance of the place of the athlete with an impairment at the heart of the Paralympic Movement. The ultimate aim of the IPC is « to enable Paralympic athletes to achieve sporting excellence and inspire and excite the world. » (International Paralympic Committee, 2016). The performance level of athletes with an impairment improved to a point that, in the present days, sport news and world sport movements focus on the potential advantage of artificial limbs among athletes with amputations and their integration in able-bodied competitions (Burkett, 2010). However, they do not represent the totality of athletes with an impairment at the Paralympic Games. Athletes with other physical impairments (visual deficit, spinal

cord injury, cerebral palsy or else) are eligible to compete. These impairments induce typical functional and physiological (e.g., cardiovascular, thermoregulatory) responses to exercise. For example, spinal cord injury (athletes with tetraplegia or paraplegia) causes thermoregulatory impairment (Goosey-Tolfrey et al., 2008) and individuals with cerebral palsy have also demonstrated higher thermal and metabolic strain than matched controls during treadmill walking in the heat (Maltais et al., 2004). Thus, hyperthermia among these athletes with an impairment alters their performance compared to their Olympic counterparts (Bhambhani, 2002). Mechanical performance analysis, the description of physiological responses according to the functional impairment or else the response to training and the relationship between laboratory and field testing responses are different parts of a package introduced here to address the aim of the IPC: to enable Paralympic athletes to achieve sporting excellence (Paralympics – History of the Movement, 2016; International Paralympic Committee, 2016). Paralympic Games, held almost immediately following the respective Olympics in the same site (Gold and Gold, 2011), also have exposed athletes to different environmental conditions. In the present 20-odd years,

three of four Summer Paralympic Games have been or will be organized in the heat with or without significant humidity: Beijing 2008 (Average weather in September for Beijing, China., 2016), Rio de Janeiro 2016 (Average weather in September for Rio de Janeiro, Brazil., 2016) and Tokyo 2020 (Average weather in September for Ota, Japan., 2016). It has been established that the environmental conditions not only influences the level of cognitive and exercise performance capacity in trained able-bodied individuals (Veneroso et al., 2015), but their health status may also be affected. Due to the above-mentioned impairment in thermoregulatory capacity athletes with spinal cord injury or cerebral palsy may be more susceptible to hyperthermia during exercise (Goosey-Tolfrey et al., 2008; Maltais et al., 2004; Bhambhani, 2002). During the Paralympic tournament, these athletes of the qualified nations were and will be exposed to heat and/or humid conditions. The hyperthermia induced by exercise among athletes with an impairment plus the effects of heat on core temperature will make their performance in the hot and warm conditions more challenging. Some studies have addressed strategies to prevent the physiologic and psychological impairments in athletic performance induced by

exercise performed in the heat (Goosey-Tolfrey et al., 2008). Other proposed that wheelchair athletes should follow recommendations advocated for able-bodied individuals to minimize their risks of heat stress during competition (Bhambhani, 2002). In the present issue, the authors provide a descriptive approach of performance, and especially the preparation of athletes with a physical impairment to optimize their exercise performance. We argue that the interactions between environmental conditions and typical responses to exercise of athletes with an impairment and the equipment interactions with athlete's body should be taken into account in the preparation of Paralympic athletes in order to witness the most magnificent sporting display: the Paralympic Games. Finally, the motto of Paralympic movement « Spirit in Motion » is also the philosophy of the present compendium: to present new advances and research findings in the field of applied physiology and biomechanics in exercise, within the context of optimize Paralympic preparation and performance of athletes presented an impairment.

Specific Sports-Related Injuries Sérgio Rocha Piedade, Philippe Neyret, João Espregueira-Mendes, Moises Cohen, Mark R. Hutchinson, 2021-05-12 This book offers a comprehensive and detailed overview of specific sports-related injuries and a valuable guide for decision-making to establish the

best strategies to prevent and manage such injuries. As a thorough understanding of each sports modality plays a key role, both in injury prevention and management, a dedicated chapter is devoted to each sports discipline. An international panel of authors examines all most popular individual and team sports – including athletics, swimming, combat sports, cycling, tennis, American football, baseball, basketball, soccer and volleyball, just to mention a few. Three additional chapters present special aspects related to sports injuries: mental health concerns in athletes, radiological assessment and patient reported-outcomes tailored to sports medicine. All chapters share a consistent format, starting with a brief presentation of the sport and its history, and then discussing its dynamics, physical demands on the athlete, common sports-related injuries, biomechanics of injuries, first aid on the field, and injury prevention. This book offers valuable resource to orthopaedists, sports physicians as well as physiotherapists practicing in the field of sports-related injuries.

Exercise and Sport Science William E. Garrett, Donald T. Kirkendall, 2000 Written by experts in exercise physiology, exercise science, and biomechanics, this volume focuses specifically on exercise

science in relation to athletic performance and to the diagnosis, management, and prevention of athletic injuries. The text is logically organized into sections on energy metabolism, exercise physiology, organ system responses to exercise, general concerns in applied exercise science, sports biomechanics, and applied sports physiology. The biomechanics and sports physiology sections focus on particular sports, to determine specific diagnosis and treatment aspects. The book also includes chapters on exercise in children and the elderly, environmental influences on physical performance, overtraining, chronobiology, and microgravity.
