Cities for Profit Gavin Shatkin,2017-09-15 *Cities for Profit* examines the phenomenon of urban real estate megaprojects in Asia—massive, privately built planned urban developments that have captured the imagination of politicians, policymakers, and citizens across the region. These controversial projects, embraced by elites, occasion massive displacement and have extensive social and economic impacts. Gavin Shatkin finds commonalities and similarities in dozens of such projects in Jakarta, Kolkata, and Chongqing. Shatkin is at the vanguard of urban studies in his focus on real estate. Just as cities are increasingly defined and remapped according to the value of the land under their residents' feet, the lives of city dwellers are shaped and constrained by their ability to keep up with rising costs of urban life. Scholars and policy and planning professionals alike will benefit from Shatkin's comprehensive research. *Cities for Profit* contains insights from more than 150 interviews, site visits to projects, and data from government and nongovernmental organization reports and data, urban plans, architectural renderings, annual reports and promotional materials of developers, and newspaper and other media accounts.

Messy Urbanism Manish Chakana,Jeffrey Hou,2016-06-01 Seemingly messy and chaotic, the landscapes and urban life of cities in Asia possess an order and hierarchy that often challenges understanding and appreciation. With contributions by a cross-disciplinary group of authors, *Messy Urbanism: Understanding the "Other" Cities of Asia* examines a range of cases in Asia to explore the social and institutional politics of urban informality and the contexts in which this "messiness" emerges or is constructed. The book brings a distinct perspective to the broader patterns of informal urban orders and processes as well as their interplay with formalized systems and mechanisms. It also raises questions about the production of cities, cityscapes, and citizenship. *Messy Urbanism* will appeal to professionals, students, and scholars in the fields of urban studies, architecture, landscape architecture, planning and policy, as well as Asian studies. "The rubric of 'messy urbanism' is a productive antidote to the binaries that have limited a productive discussion about urbanism in Asia. This book is a significant contribution in understanding the inherent nature of the built environments in aspiring democracies—an emergent urbanism that seamlessly embraces the incremental, temporal, and ephemeral as given conditions in the formation of Asian cities." —Rahul Mehrotra, Architect / Professor of Urban Design and Planning, Harvard University "This book is of a high quality, with multiple examples from Hong Kong and China. The authors have covered the topic admirably and I expect the book to attract a wide readership." —Vinit Mukhija, Associate Professor and Vice Chair of Urban Planning, UCLA

New Suburbanism: Sustainable Tall Building Development Kheir Al-Kodmany,2016-04-14 Much of the anticipated future growth in the United States will take place in suburbia. The critical challenge is how to accommodate this growth in a sustainable and resilient manner. This book explores the role of suburban tall as a viable, sustainable alternative to continued

suburban sprawl. It identifies 10 spatial patterns in which tall buildings have been integrated into the American suburbs. The study concludes that the Tall Building and Transit-Oriented-Development (TB-TOD) model is the most appropriate to promote sustainable suburbanism. The findings are based on analyzing over 300 projects in 24 suburban communities within three major metropolitan areas including: Washington, DC, Miami, Florida, and Chicago, Illinois. The book furnishes planning strategies that address the social, economic, and environmental aspects of sustainable tall building development. It also discusses sustainable architectural design and site planning strategies and provides case studies of sustainable tall buildings that were successfully integrated into suburban settings.

State of the World's Cities 2008/9 Un-Habitat, 2012-05-04 Cities are perhaps one of humanity's most complex creations, never finished, never definitive. They are like a journey that never ends. Their evolution is determined by their ascent into greatness or their descent into decline. They are the past, the present and the future. Cities contain both order and chaos. In them reside beauty and ugliness, virtue and vice. They can bring out the best or the worst in humankind. They are the physical manifestation of history and culture and incubators of innovation, industry, technology, entrepreneurship

and creativity. Cities are the materialization of humanity's noblest ideas, ambitions and aspirations but when not planned or governed properly, can be the repository of society's ills. Cities drive national economies by creating wealth, enhancing social development and providing employment but they can also be the breeding grounds for poverty, exclusion and environmental degradation. The 21st Century is the Century of the City. Half of humanity now lives in cities, and within the next two decades, 60 per cent of the world's people will reside in urban areas. How can city planners and policymakers harmonize the various interests, diversity and inherent contradictions within cities? What ingredients are needed to create harmony between the physical, social, environmental and cultural aspects of a city and the human beings that inhabit it? This report adopts the concept of Harmonious Cities as a theoretical framework in order to understand today's urban world, and also as an operational tool to confront the most important challenges facing urban areas and their development processes. It recognizes that tolerance, diversity, social justice and good governance, all of which are inter-related, are as important to sustainable urban development as physical planning. It addresses national concerns by searching for solutions at the city level. For that purpose, it focuses on three key areas: spatial or regional harmony, which examines the main drivers of urban growth in the developing world and explores the spatial nuances of economic and social policies; social harmony, which presents and analyzes new data on urban inequalities worldwide and describes the types of shelter deprivations experienced by slum dwellers in developing world regions; and environmental harmony, which examines the role of cities in the climate change debate, and the impact of global warming on the most vulnerable cities. The report also assesses the various intangible assets within cities that contribute to harmony, such as cultural heritage, sense of place and memory and the complex set of social and symbolic relationships that give cities meaning. It argues that these intangible assets represent the soul of the city and are as important for harmonious urban development as tangible assets. Harmony within cities, argues the report, is both a journey and a destination. Published with UN-HABITAT
