Counter-shock Duccio Basosi,Giuliano Garavini,Massimiliano Trentin,2018-04-30 The oil price collapse of 1985-6 had momentous global consequences: non-fossil energy sources quickly became uncompetitive, the previous talk of an OPEC 'imperium' was turned upside-down, the Soviet Union lost a large portion of its external revenues, and many Third World producers saw their foreign debts peak. Compared to the much-debated 1973 'oil shock', the 'countershock' has not received the same degree of attention, even though its legacy has shaped the present-day energy scenario. This volume is the first to put the oil 'counter-shock' of the mid-1980s into historical perspective. Featuring some of the most knowledgeable experts in the field, Counter-Shock offers a balanced approach between the global picture and local study cases. In particular, it highlights the crucial interaction between the oil counter-shock and the political 'counterrevolution' against state intervention in economic management, put forward by Ronald Reagan and Margaret Thatcher in the same period.

Directions in Number Theory Ellen E. Eischen,Ling Long,Rachel Pries,Katherine E. Stange,2016-09-26 Exploring the interplay between deep theory and intricate computation, this volume is a compilation of research and survey papers in number theory, written by members of the Women In Numbers (WIN) network, principally by the collaborative research groups formed at Women In Numbers 3, a conference at the Banff International Research Station in Banff, Alberta, on April 21-25, 2014. The papers span a wide range of research areas: arithmetic geometry; analytic number theory; algebraic number theory; and applications to coding and cryptography. The WIN conference series began in 2008, with the aim of strengthening the research careers of female number theorists. The series introduced a novel research-mentorship model: women at all career stages, from graduate students to senior members of the community, joined forces to work in focused research groups on cutting-edge projects designed and led by experienced researchers. The goals for Women In Numbers 3 were to establish ambitious new collaborations between women in number theory, to train junior participants about topics of current importance, and to continue to build a vibrant community of women in number theory. Forty-two women attended the WIN3 workshop, including 15 senior and mid-level faculty, 15 junior faculty and postdocs, and 12 graduate students.

ABCs of z/OS System Programming Paul Rogers,Juha Vainikainen,IBM Redbooks,2012-02-07 A major goal of operating systems is to process jobs while making the best use of system resources. Thus, one way of viewing operating systems is as resource managers. Before job processing, operating systems reserve input and output resources for jobs. During job processing, operating systems manage resources such as processors and storage. After job processing, operating systems free all resources used by the completed jobs, making the resources available to other jobs. This process is called resource management. There is more to the processing of jobs than the managing of resources needed by the jobs. At any instant, a number of jobs can be in various stages of preparation, processing, and post-processing activity. To use resources efficiently, operating systems divide jobs into parts. They distribute the parts of jobs to queues to wait for needed resources. Keeping track of where things are and routing work from queue to queue is called workflow management, and is a major function of any operating system. JES3 considers job priorities, device and processor alternatives, and installation-specified preferences in preparing jobs for processing job output. This IBM® Redbooks® publication describes a JES3 environment that includes the following: - Single-system image - Workload balancing - Availability - Control flexibility - Physical planning flexibility.

IBM CICS and the Coupling Facility: Beyond the Basics Arndt Eade,Randy Frerking,Rich Jackson,Kellie Mathis,IBM Redbooks,2018-02-21 It's easy to look at the title of a book and think that's old news or I already know all there is to know on that subject. But before you dismiss this publication, consider just how far the IBM® Parallel Sysplex® architecture has come. From the early days the mainframe has embraced a shared everything approach. The original designers coded IBM z/OS® (called IBM MVSTM or IBM OS/390® back then) with the functionality necessary for the operating system to create the repositories, manage the data flow, and ensure the integrity of the systems involved. From there, the middleware systems provided the exploitation and advanced functions to mature the technology. The component in the middle of all this great technology can easily be taken for granted. That is the IBM Coupling Facility. This IBM Redbooks® publication discusses both traditional uses for the IBM Coupling Facility technology and new ways to use it with products such as IBM CICS®. You can learn how to perform new functions and have these functions benefit from the scalability and availability achieved only in a mainframe ecosystem. Open standards are a large part of considerations today, as most companies run IT shops with a mix of technology components. As the world embraces these technologies, it is necessary to understand how to mix the world of mainframe architectures and products with other open architectures. This mix allows the best tool to be used to solve processing needs, at the right cost and service levels. Often the functions needed for modern processing can be found in house, in places where staff are skilled and that already deliver the robust production environments you count on daily. This book discusses these modern functions and how to achieve them with CICS use of the IBM Coupling Facility. You will learn how one IBM client, Walmart, took these concepts far beyond the original design as they share their experiences and even share code examples to help you get started. The last chapter of this book shows what can be achieved when a combination of old and new functions are use together. Even if you have familiarity with what could be done with the IBM Coupling Facility in the past, there is much to learn and deploy in a modern world. Those who are familiar with the IBM Coupling Facility might find the content of this book helpful. Additionally, readers who are considering how to use the IBM Coupling Facility technology within their environment might also find useful information in the chapters that follow

Art and Letters, Love and Desires Jack Leissring,Ellen Koment,2011-03-05 Ellen Koment first met Jack Leissring in 1969, when he came to her studio in Valley Ford, CA., and bought the first of many of her paintings. Since then they have been mutual inspirations and good friends. Jack was the collector (perhaps patron) that every artist dreams of, Ellen was the artist that every lover of art hopes to find. In 1995 they were in a French Cafe in San Francisco, where Jack suggested that men, in general, and, specifically he, didn't really understand how women thought. Ellen responded that, while she couldn't speak for all women, she would try to share her responses to art, relationships, and love, any and all things that friends share. These letters, by email, were what came from the conversation.
