Jellyfish Lisa-ann Gershwin, 2016-06-07 An introduction to these bizarre and beautiful creatures of the sea, filled with color photos and illustrations: "Fascinating."—Boing Boing Jellyfish are the oldest multi-organelled life form on the planet, having inhabited the ocean for more than five hundred million years. With their undulating umbrella-shaped bells and sprawling tentacles, they are compelling and gorgeous, strange and dangerous. In many places they're also vastly increasing in number, and these population blooms may be an ominous indicator of the rising temperatures and toxicity of the oceans. Jellyfish presents these aquarium favorites in all their glory. Fifty unique species, from the purple people eater to black sea nettles, are presented in stunning photos along with the most current scientific information on their anatomy, history, distribution, position in the water, and environmental status. Foremost jellyfish expert Lisa-ann Gershwin provides an insightful look at the natural history and biology of each of these spellbinding creatures, plus a timely take on their place in the rapidly changing and deteriorating condition of the oceans. Learn about immortal jellyfish who live and die and live again—as well as those who camouflage themselves amid sea grasses and shells, hiding in plain sight. Discover the jellyfish that's the world's most venomous animal, and the jellyfish that helped scientists win the Nobel Prize. They're all here and more in this delightful volume. "A thorough coverage of jellyfish history, biology

and ecology. Gershwin, a marine biologist who has discovered over 200 new species of jellyfish, does an excellent job of combining a compelling narrative of 50 different jellyfish with luscious, I-can't-believe-they're-real photos."—Boing Boing

Jellyfish Leighton R. Taylor, 1998-01-01

Describes the life cycle, habitat, behavior, and physical structure of the soft-bodied sea animal that has no brain or bones.

Jellyfish! Ginjer L. Clarke, 2021-02-02 Learn the fascinating story of one of the world's oldest animals: jellyfish! Jellyfish are everywhere and are one of the Earth's most fascinating animals. From the giant Nomura jellyfish in Japan, to the small but deadly kingslayer jellyfish in Australia, veteran nonfiction author Ginjer L. Clarke spotlights one of the world's oldest animal groups. Told with simple language and shown with vivid photographs, *Jellyfish!* is perfect for

emerging readers curious about the natural world.

Jellyfish Peter Williams, 2020-04-13 Jellyfish are, like the mythical Medusa, both beautiful and potentially dangerous. Found from pole to tropic, these mesmeric creatures form an important part of the sea's plankton and vary in size from the gigantic to the minute. Perceived as almost alien creatures and seen as best avoided, jellyfish nevertheless have the power to fascinate: with the sheer beauty of their translucent bells and long, trailing tentacles, with a mouth that doubles as an anus, and without a head or brain. Drawing upon myth and historical sources as well as modern scientific advances, this book examines our ambiguous relationship with these ancient and yet ill-understood animals, describing their surprisingly complex anatomy, weaponry, and habits, and their vital contributions to the ocean's ecosystems.

Jellyfish David C. King, 2006 Describes the physical characteristics, behavior, and habitat of jellyfish.

Jellyfish Christina Leaf, 2016-08-01 Jellyfish are graceful, beautiful ocean animals. But their looks are deceiving. Those long, wavy tentacles can really sting! Jellyfish are often transparent. They do not have bones, blood, or brains. Despite their simplicity, these creatures have been around for millions of years. Discover more about jellyfish in this title for emergent readers.

The Box Jellyfish Laura Sullivan, 2017-07-15 The Australian box jellyfish is the most venomous animal in the oceans, with the capability to kill a human in minutes. There are about fifty species

of box jellyfish. Readers learn where they live, how they eat, how they strike, what happens when one stings you, and what creature is immune to its powerful poison.

Spineless Juli Berwald, 2018-11-06 A book full of wonders –Helen Macdonald, author of *H Is for Hawk* Witty, insightful. . . .The story of jellyfish. . . is a significant part of the environmental story. Berwald's engaging account of these delicate, often ignored creatures shows how much they matter to our oceans' future. –New York Times Book Review Jellyfish have been swimming in our oceans for well over half a billion years, longer than any other animal that lives on the planet. They make a venom so toxic it can kill a human in three minutes. Their sting—microscopic spears that pierce with five million times the acceleration of gravity—is the fastest known motion in the animal kingdom. Made of roughly 95 percent water, some jellies are barely perceptible virtuosos of disguise, while others glow with a luminescence that has revolutionized biotechnology. Yet until recently, jellyfish were largely ignored by science, and they remain among the most poorly understood of oceandwellers. More than a decade ago, Juli Berwald left a career in ocean science to raise a family in landlocked Austin, Texas, but jellyfish drew her back to the sea. Recent, massive blooms of billions of jellyfish have clogged power plants, decimated fisheries, and caused millions of dollars of damage. Driven by questions about how overfishing, coastal development, and climate change were contributing to a jellyfish population explosion, Juli embarked

on a scientific odyssey. She traveled the globe to meet the biologists who devote their careers to jellies, hitched rides on Japanese fishing boats to see giant jellyfish in the wild, raised jellyfish in her dining room, and throughout it all marveled at the complexity of these alluring and ominous biological wonders. Gracefully blending personal memoir with crystal-clear distillations of science, *Spineless* is the story of how Juli learned to navigate and ultimately embrace her ambition, her curiosity, and her passion for the natural world. She discovers that jellyfish science is more than just a quest for answers. It's a call to realize our collective responsibility for the planet we share.

Jellyfish in the Water Clara Coleman, 2017-12-15 Jellyfish aren't fish, and they aren't made of jelly. So what exactly are they? Colorful images add depth to the text and make this early elementary life-science topic come alive on each page. Jellyfish Lynn M. Stone, 2013-03-01 Learn about how jellyfish live, grow, and survive in the ocean.

Jellyfish Carol K. Lindeen, 2004-07 Simple text and photographs present the lives of jellyfish.
