Intelligent Robotics and Applications Ming Xie, Youlun Xiong, Caihua Xiong, Zhencheng Hu, 2009-12-14 The market demands for skills, knowledge and personalities have positioned robotics as an important field in both engineering and science. To meet these challenging - mands, robotics has already seen its success in automating many industrial tasks in factories. And, a new era will come for us to see a greater success of robotics in n- industrial environments. In anticipating a wider deployment of intelligent and auto- mous robots for tasks such as manufacturing, eldercare, homecare, edutainment, search and rescue, de-mining, surveillance, exploration, and security missions, it is necessary for us to push the frontier of robotics into a new dimension, in which motion and intelligence play equally important roles. After the success of the inaugural conference, the purpose of the Second Inter- tional Conference on Intelligent Robotics and Applications was to provide a venue where researchers, scientists, engineers and practitioners throughout the world could come together to present and discuss the latest achievement, future challenges and exciting applications of intelligent and autonomous robots. In particular, the emphasis of this year's conference was on "robot intelligence for achieving digital manufact- ing and intelligent automations. " This volume of Springer's Lecture Notes in Artificial Intelligence and Lecture Notes in Computer Science contains accepted papers presented at ICIRA 2009, held in Singapore, December 16–18, 2009. On the basis of the reviews and recommendations by the international Program

Committee members, we decided to accept 128 papers having technical novelty, out of 173 submissions received from different parts of the world.

*Strategic Pervasive Computing Applications: Emerging Trends* Godara, Varuna, 2010-02-28 The focus of this book is on the ever increasing capacity of Pervasive context-aware applications that are aiming to develop into context-responsive applications in different application areas--Provided by publisher.

*Gesture* Steven G. McCafferty, Gale Stam, 2009-06-02 This book demonstrates the vital connection between language and gesture, and why it is critical for research on second language acquisition to take into account the full spectrum of communicative phenomena. The study of gesture in applied linguistics is just beginning to come of age. This edited volume, the first of its kind, covers a broad range of concerns that are central to the field of SLA. The chapters focus on a variety of second-language contexts, including adult classroom and naturalistic learners, and represent learners from a variety of language and cultural backgrounds. *Gesture: Second Language Acquisition and Classroom Research* is organized in five sections: Part I, *Gesture and its L2 Applications*, provides both an overview of gesture studies and a review of the L2 gesture research. Part II, *Gesture and Making Meaning in the L2*, offers three studies that all take an explicitly sociocultural view of the role of gesture in SLA. Part III, *Gesture and Communication in the L2*, focuses on the use and comprehension of gesture as an aspect of communication. Part IV, *Gesture and Linguistic Structure in the L2*, addresses the relationship between gesture and the acquisition of linguistic features, and how gesture relates to proficiency. Part V, *Gesture and the L2 Classroom*, considers teachers' gestures, students' gestures, and how students' interpret teachers' gestures. Although there is a large body of research on gesture across a number of disciplines including anthropology, communications, psychology, sociology, and child development, to date there has been comparatively little investigation of gesture within applied linguistics. This volume provides readers unfamiliar with L2 gesture studies with a powerful new lens with which to view many aspects of language in use, language learning, and language teaching.

*Sensor Signal and Information Processing III* Wai Lok Woo, Bin Gao, 2021-02-05 In the current age of information explosion, newly invented technological sensors and software are now tightly integrated with our everyday lives. Many sensor processing algorithms have incorporated some forms of computational intelligence as part of their core framework in problem-solving. These algorithms have the capacity to generalize and discover

knowledge for themselves and to learn new information whenever unseen data are captured. The primary aim of sensor processing is to develop techniques to interpret, understand, and act on information contained in the data. The interest of this book is in developing intelligent signal processing in order to pave the way for smart sensors. This involves the mathematical advancement of nonlinear signal processing theory and its applications that extend far beyond traditional techniques. It bridges the boundary between theory and application, developing novel theoretically inspired methodologies targeting both longstanding and emergent signal processing applications. The topics range from phishing detection to integration of terrestrial laser scanning, and from fault diagnosis to bio-inspired filtering. The book will appeal to established practitioners, along with researchers and students in the emerging field of smart sensor signal processing.

*Soft Computing for Biomedical Applications and Related Topics* Vladik Kreinovich, Nguyen Hoang Phuong, 2020-06-29 This book presents innovative intelligent techniques, with an emphasis on their biomedical applications. Although many medical doctors are willing to share their knowledge – e.g. by incorporating it in computer-based advisory systems that can benefit other doctors – this knowledge is often expressed using imprecise (fuzzy) words from natural language such as “small,” which are difficult for computers to process. Accordingly, we need fuzzy techniques to handle such words. It is also desirable to extract general recommendations from the records of medical doctors’ decisions – by using machine learning techniques such as neural networks. The book describes state-of-the-art fuzzy, neural, and other techniques, especially those that are now being used, or potentially could be used, in biomedical applications. Accordingly, it will benefit all researchers and students interested in the latest developments, as well as practitioners who want to learn about new techniques.
