Practical Astronomy with your Calculator or Spreadsheet Peter Duffett-Smith,Jonathan Zwart,2017-07-06 Now in its fourth edition, this highly regarded book is ideal for those who wish to solve a variety of practical and recreational problems in astronomy using a scientific calculator or spreadsheet. Updated and extended, this new edition shows you how to use spreadsheets to predict, with greater accuracy, solar and lunar eclipses, the positions of the planets, and the times of sunrise and sunset. Suitable for worldwide use, this handbook covers orbits, transformations and general celestial phenomena, and is essential for anyone wanting to make astronomical calculations for themselves. With clear, easy-to-follow instructions for use with a pocket calculator, shown alongside worked examples, it can be enjoyed by anyone interested in astronomy, and will be a useful tool for software writers and students studying introductory astronomy. High-precision spreadsheet methods for greater accuracy are available at www.cambridge.org/practicalastronomy.

Google Hacks Tara Calishain,Rael Dornfest,2005 Dives headfirst into getting the most out of Google: finding rather than just searching, performing useful tasks to get a job done and using the Google API to automate complicated or repetitive tasks. - cover.

SQL at Work Howard F. Arner,2001 Whether the reader is just learning SQL or is an experienced user, iSeries and AS/400 SQL at Work shows how to make SQL work in the business environment. Beginners will benefit from the chapters that teach SQL basics by relating them to the concepts they already know. For those more experienced in SQL, this book offers practical, solid information on performance-tuning of SQL statements, the OS/400 query optimizer, advanced SQL capabilities, and special tips and tricks specific to OS/400.In addition to SQL basics, iSeries and AS/400 SQL at Work provides extensive information on the Stored Procedure Language and clearly explains encoded vector indexes and when to use them. The book also offers practical examples of embedded SQL and even includes several killer queries that will teach the readers advanced SQL concepts they can apply to their daily work for increased productivity.Programmers in today's ever-changing IT world must continue to raise their marketable skill sets and visibility. Learning SQL, the industry-standard data-access and manipulation language, will help them realize their goals.

Understanding Variable Stars John R. Percy,2007-05-24 This book was first published in 2007. Variable stars are those that change brightness. Their variability may be due to geometric processes such as rotation, or eclipse by a companion star, or physical processes such as vibration, flares, or cataclysmic explosions. In each case, variable stars provide unique information about the properties of stars, and the processes that go on within them. This book provides a concise overview of variable stars, including a historical perspective, an introduction to stars in general, the techniques for discovering and studying variable stars, and a description of the main types of variable stars. It ends with short reflections about the connection between the study of variable stars, and research, education, amateur astronomy, and public interest in astronomy. This book is intended for anyone with some background knowledge of astronomy, but is especially suitable for undergraduate students and experienced amateur astronomers who can contribute to our understanding of these important stars.

Calendrical Calculations Millennium Edition Edward M. Reingold,Nachum Dershowitz,2001-08-06 This book makes accurate calendrical algorithms readily available for computer use.

Astronomy with Your Personal Computer Peter Duffett-Smith,1990-06-29 The first edition of this very successful book was one winner of the Astronomical Society of the Pacific 'Astronomy Book of the Year' awards in 1986. There are a further seven subroutines in the new edition which can be linked in any combination with the existing twenty-six. Written in a portable version of BASIC, it enables the amateur astronomer to make calculations using a personal computer. The routines are not specific to any make of machine and are user friendly in that they require only a broad understanding of any particular problem. Since the programs themselves take care of details, they can be used for example to calculate the time of rising of any of the planets in any part of the world at any time in the future or past, or they may be used to find the circumstances of the next solar eclipse visible from a particular place. In fact, almost every problem likely to be encountered by the amateur astronomer can be solved by a suitable combination of the routines given in the book.

Living Under the Evil Pope Martina Mampieri,2020 In Living under the Evil Pope, Martina Mampieri presents the Hebrew Chronicle of Pope Paul IV, written in the second half of the sixteenth century by the Italian Jewish moneylender Benjamin Neḥemiah ben Elnathan (alias Guglielmo di Diodato) from Civitanova Marche. The text remained in manuscript for about four centuries until the Galician scholar Isaiah Sonne (1887-1960) published a Hebrew annotated edition of the chronicle in the 1930s. This remarkable source offers an account of the events of the Papal States during Paul IV's pontificate (1555-59). Making use of broad archival materials, Martina Mampieri reflects on the nature of this work, its historical background, and contents, providing a revised edition of the Hebrew text as well as the first unabridged English translation and commentary. Martina Mampieri has been granted a special mention of excellence in the Alberigo Award 2021 by the European Academy of Religion and Fondazione per le Scienze Religiose. (<https://www.europeanacademyofreligion.org/alberigo-award>) Martina Mampieri provides scholars with a source of great interest, which helps better understand the complex period following the election of Pope Paul IV Carafa from a Jewish perspective. This is undoubtedly an important book that contributes to the advancement of our knowledge regarding that historical moment. -Alessandra Veronese, AJS Review 45/1 (2021) This valuable source is now available to the many - the many including, and this is no small thing, those who study the history of historical writing for itself as that writing began emerging from the shadows at just this time. We are

deeply indebted. -Kenneth Stow, University of Haifa, Emeritus, Journal of Modern Jewish Studies 20/1 (2021)

Practical Astronomy with Your Calculator Peter Duffett-Smith,1988 Using clear and logical routines, this book shows how a variety of problems and exercises in modern astronomy can be readily solved with a scientific calculator. Spacecraft Autonomous Navigation Technologies Based on Multi-source Information Fusion Dayi Wang, Maodeng Li, Xiangyu Huang, Xiaowen Zhang, 2020-07-31 This book introduces readers to the fundamentals of estimation and dynamical system theory, and their applications in the field of multi-source information fused autonomous navigation for spacecraft. The content is divided into two parts: theory and application. The theory part (Part I) covers the mathematical background of navigation algorithm design, including parameter and state estimate methods, linear fusion, centralized and distributed fusion, observability analysis, Monte Carlo technology, and linear covariance analysis. In turn, the application part (Part II) focuses on autonomous navigation algorithm design for different phases of deep space missions, which involves multiple sensors, such as inertial measurement units, optical image sensors, and pulsar detectors. By concentrating on the relationships between estimation theory and autonomous navigation systems for spacecraft, the book bridges the gap between theory and practice. A wealth of helpful formulas and various types of estimators are also included to help readers grasp basic estimation concepts and offer them a ready-reference guide.
