*The Finder* Will Ferguson,2020-09-01 From the Scotiabank Giller Prize-winning novelist of 419 comes a spellbinding literary adventure novel about precious objects lost and found. The world is filled with wonders, lost objects—all real—all still out there, waiting to be found: · the missing Fabergé eggs of the Romanov dynasty, worth millions · the last reel of Alfred Hitchcock's first film · Buddy Holly's iconic glasses · Muhammad Ali's Olympic gold medal How can such cherished objects simply vanish? Where are they hiding? And who on earth might be compelled to uncover them? Will Ferguson takes readers on a heroic, imaginative journey across continents, from the seas of southern Japan, to the arid Australian Outback, to the city of Christchurch, New Zealand, after the earthquake. Prepare to meet Gaddy Rhodes, a brittle Interpol agent obsessed with tracking "The Finder"—a shadowy figure she believes is collecting lost objects; Thomas Rafferty, a burnt-out travel writer whose path crosses that of *The Finder*, to devastating effect; and Tamsin Greene, a swaggering war photographer who is hiding secrets of her own. *The Finder* is a beguiling and wildly original tale about the people, places, and things that are lost and

found in our world. Both an epic literary adventure and an escape into a darkly thrilling world of deceit and its rewards, this novel asks: How far would you be willing to go to recover the things you've left behind?

#### Theory and Applications of Satisfiability Testing – SAT 2008

Hans Kleine Büning, Zhao Xishunb, 2008-04-25 This volume contains the papers presented at the 11th International Conference on Theory and Applications of Satisfiability Testing (SAT 2008). The series of International Conferences on Theory and Applications of Satisfiability Testing (SAT) has evolved from a first workshop on SAT in 1996 to an annual international conference which is a platform for researchers studying various aspects of the

propositional satisfiability problem and its applications. In the past, the SAT conference venue alternated between Europe and North America. For the first time, the conference venue was in Asia, more precisely at the Zhudao Guest House, near Sun Yat-Sen University in Guangzhou, P. R. China. Many hard combinatorial problems can be encoded into SAT. Therefore -

provements on heuristics on the practical side, as well as theoretical insights into SAT apply to a large range of real-world problems. More specifically, many important practical verification problems can be rephrased as SAT problems. This applies to verification problems in hardware and software. Thus SAT is becoming one of the most important core technologies to verify secure and dependable systems. The topics of the conference span practical and theoretical research on SAT and its applications and include but are not limited to proof systems, proof complexity, search algorithms, heuristics, analysis of algorithms, hard instances, randomized formulae, problem encodings, industrial applications, solvers, splitters, tools, case studies, and empirical results. SAT is interpreted in a rather broad sense: besides propositional satisfiability, it includes, for example, the main of quantified Boolean formulae (QBF) and satisfiability modulo

theories (SMT).
