Twelve Years a Slave Solomon Northup,2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

Activity-Based Protein Profiling Benjamin F. Cravatt,Ku-Lung Hsu,Eranthie Weerapana,2019-01-25 This volume provides a collection of contemporary perspectives on using activity-based protein profiling (ABPP) for biological discoveries in protein science, microbiology, and immunology. A common theme throughout is the special utility of ABPP to interrogate protein function and small-molecule interactions on a global scale in native biological systems. Each chapter showcases distinct advantages of ABPP applied to diverse protein classes and biological systems. As such, the book offers readers valuable insights into the basic principles of ABPP technology and how to apply this approach to biological questions ranging from the study of post-translational modifications to targeting bacterial effectors in host-pathogen interactions.

Pandemic Disease in the Medieval World Monica Helen Green,2015 The plague organism (*Yersinia pestis*) killed an estimated 40% to 60% of all people when it spread rapidly through the Middle East, North Africa, and Europe in the fourteenth century: an event known as the Black Death. Previous research has shown, especially for Western Europe, how population losses then led to structural economic, political, and social changes. But why and how did the pandemic happen in the first place? When and where did it begin? How was it sustained? What was its full geographic extent? And when did it really end?

The Word Rhythm Dictionary Timothy Polashek,2014-04-18 This new kind of dictionary reflects the use of “rhythm rhymes” by rappers, poets, and songwriters of today. Users can look up words to find collections of words that have the same rhythm as the original and are useable in ways that are familiar to us in everything from vers libre poetry to the lyrics and music of Bob Dylan and hip hop groups.

Fighting Identity Michael Vlahos,2009 This work is about how deeply war is intertwined in what it means to be human - in belonging and in collective identity, in the shared rituals of society, in the ongoing negotiation that represents relationships between societies everywhere. Vlahos examines that idea in chapters that explore the following eight themes.--BOOK JACKET.

Dendritic Molecules George R. Newkome,Charles N. Moorefield,Fritz Vögtle,2008-07-11 The first book on dendrimers! The authors, pioneers in this scientific field, describe basic principles and current developments in the rapidly evolving field of dendrimer research. All aspects of the subject are covered: the authors provide a historical overview, theoretical background, and discussions of the synthesis and applications of dendrimers. The book thus spans organic chemistry and more application-orientated disciplines like material science and pharmaceutical chemistry. The excellent, detailed list of references further increases the value of the book. The optimal presentation of the structural formulas of dendrimers - highly symmetrical giant molecules - helps the reader understand the sophisticated synthesis quickly. This book will set the standard for further monographs on this subject.

A Century of Physics D. Allan Bromley,2013-03-14 In this Cook's Tour of developments in physics and related fields, D. Allan Bromley, Science Advisor to President Bush during 1989-1993 and past president of the American Physical Society, conveys much of the excitement and wonder that research in physics generated in the 20th century and asks what new things are in store in the next century.

Biologically Inspired Robotics Yunhui Liu,Dong Sun,2011-12-21 Robotic engineering inspired by biology—biomimetics—has many potential applications: robot snakes can be used for rescue operations in disasters, snake-like endoscopes can be used in medical diagnosis, and artificial muscles can replace damaged muscles to recover the motor functions of human limbs. Conversely, the application of robotics technology to our understanding of biological systems and behaviors—biorobotic modeling and analysis—provides unique research opportunities: robotic manipulation technology with optical tweezers can be used to study the cell mechanics of human red blood cells, a surface electromyography sensing system can help us identify the relation between muscle forces and hand movements, and mathematical models of brain circuitry may help us understand how the cerebellum achieves movement control. *Biologically Inspired Robotics* contains cutting-edge material—considerably expanded and with additional analysis—from the 2009 IEEE International Conference on Robotics and Biomimetics (ROBIO). These 16 chapters cover both biomimetics and biorobotic modeling/analysis, taking readers through an exploration of biologically inspired robot design and control, micro/nano bio-robotic systems, biological measurement and actuation, and applications of robotics technology to biological problems. Contributors examine a wide range of topics, including: A method for controlling the motion of a robotic snake The design of a bionic fitness cycle inspired by the jaguar The use of autonomous robotic fish to detect pollution A noninvasive brain-activity scanning method using a hybrid sensor A rehabilitation system for recovering motor function in human hands after injury Human-like robotic eye and head movements in human-machine interactions A state-of-the-art resource for graduate students and researchers in the fields of control engineering, robotics, and biomedical engineering, this text helps readers understand the technology and principles in this emerging field.

Innovation Systems in Small Catching-Up Economies Elias G. Carayannis,Urmas Varblane,Tonu Roolah,2011-12-13 In several parts of the world, countries are undergoing economic, social, and political transitions, enhanced and accelerated by the forces of globalization. These transition economies can serve as laboratories for understanding the innovation process. This volume features original theoretical and empirical research. It offers the first comprehensive view of innovation system development in the context of small catching-up economies. Smallness, path dependency, and latecomer status of such economies create some inherent limitations for their innovation systems, but these special characteristics can offer advantages as well. For example, smallness is often related with increased flexibility and shorter reaction times, while latecomers can benefit from earlier experiences of their more advanced neighbors. Path-dependency highlights the fact that the innovation system development processes are considerably influenced by the past experience of a particular country or region. By incorporating these features into an integrated analysis, the authors address such questions as: · What special features characterize the innovation system development in small catching-up economies? · What are the causes for innovation success or failure? · How do organizational capabilities and internationalization tendencies relate to company level innovations? · What is the role of human capital and social factors in the innovation process? · How can various policies support innovation in an integrated manner? Drawing from research about Europe, Asia, and Latin America, the authors provide readers with a systemic view of the innovation system development in small catching-up economies. They discuss the unique features of this development and contribute to an in-depth understanding of various determinants and their impacts on the innovation process. The policy implications will offer a set of normative guidelines for enhancing innovation system development.

Inside Hitler's High Command Geoffrey P. Megargee,2000 Challenging previous accounts, Megargee shatters the myth that German generals would have prevailed in World War II if only Hitler had not meddled in their affairs. Instead, he observes that the military's strategic ideas were no better than Hitler's and often were worse. 20 photos.

Electron Paramagnetic Resonance Bruce C. Gilbert,Victor Chechik,Damien M. Murphy,2010-12-16 Annotation Electron Paramagnetic Resonance (EPR) highlights major developments in this area, with results being set into the context of earlier work and presented as a set of critical yet coherent overviews. The topics covered describe contrasting types of application, ranging from biological areas such as EPR studies of free-radical reactions in biology and medically-related systems, to experimental developments and applications involving EPR imaging, the use of very high fields, and time-resolved methods. Critical and up-to-the-minute reviews of advances involving the design of spin-traps, advances in spin-labelling, paramagnetic centres on solid surfaces, exchange-coupled oligomers, metalloproteins and radicals in flavoenzymes are also included. As EPR continues to find new applications in virtually all areas of modern science, including physics, chemistry, biology and materials science, this series caters not only for experts in the field, but also those wishing to gain a general overview of EPR applications in a given area.

Knowledge Perspectives of New Product Development Dimitris G Assimakopoulos,Elias G. Carayannis,Rafiq Dossani,2011-12-02 New Product Development (NPD) is about the ideation, formulation, and implementation of new and superior solutions in the market. Beyond the obvious need for organizations to innovate in order to compete, embedded in any NPD program are knowledge, technological expertise, and the social networks that convert these capabilities into offerings that create value at every level—for customers, industries, communities, and regions. This volume provides an array of knowledge perspective in NPD across multiple levels of analysis and geographic regions, including Europe, the United States, China, Japan, and India, to explore the dynamics of NPD in today’s global environment. Presenting case studies from such industries as ICT services, semiconductors, software development, bio-technology, higher education, and even safety for children’s toys, and drawing from a variety of theoretical perspectives, including technology and knowledge management, sociology, economic geography, and organizational behavior, the authors highlight critical success and failure factors in NPD. Among the topics covered: New product development teams, including multi-functional and multi-site teams De-localization and off-shoring of tasks and processes Individual competencies and organizational capabilities University-industry interactions, high-tech clusters, and technology transfer Technology policy

Affective Health and Masculinities in South Africa Hans Reihling,2020-04-03 Affective Health and Masculinities in South Africa explores how different masculinities modulate substance use, interpersonal violence, suicidality, and AIDS as well as recovery cross-culturally. With a focus on three male protagonists living in very distinct urban areas of Cape Town, this comparative ethnography shows that men’s struggles to become invulnerable increase vulnerability. Through an analysis of masculinities as social assemblages, the study shows how affective health problems are tied to modern individualism rather than African ‘tradition’ that has become a cliché in Eurocentric gender studies. Affective health is conceptualized as a balancing act between autonomy and connectivity that after colonialism and apartheid has become compromised through the imperative of self-reliance. This book provides a rare perspective on young men’s vulnerability in everyday life that may affect the reader and spark discussion about how masculinities in relationships shape physical and psychological health. Moreover, it shows how men change in the face of distress in ways that may look different than global health and gender-transformative approaches envision. Thick descriptions of actual events over the life course make the study accessible to both graduate and undergraduate students in the social sciences. Contributing to current debates on mental health and masculinity, this volume will be of interest to scholars from various disciplines including anthropology, gender studies, African studies, psychology, and global health.
