Agricultural Technologies and Tropical Deforestation Arild Angelsen, David Kaimowitz, 2001-04-20 This book has been developed from a workshop on Technological change in agriculture and tropical deforestation organised by the Center for International Forestry Research and held in Costa Rica in March, 1999. It explores how intensification of agriculture affects tropical deforestation using case studies from different geographical regions, using different agricultural products and technologies and in differing demographic situations and market conditions. Guidance is also given on future agricultural research and extension efforts.

Working with Ferns Helena Fernández, Ashwani Kumar, Maria Angeles Revilla, 2010-11-11 This well timed volume features a selection of chapters composed by experts in their respective fields. It covers a broad range of topics, from its fundamental biology to the fern's population genetics and environmental and therapeutic applications.

Low Back Disorders Stuart McGill, 2007 This second edition of 'Low Back Disorders' provides research information on low back problems and shows readers how to interpret the data for clinical applications.

The Prokaryotes Stanley Falkow, Eugene Rosenberg, Karl-Heinz Schleifer, Erko Stackebrandt, 2006-11-14 The revised Third Edition of The Prokaryotes, acclaimed as a classic reference in the field, offers new and updated articles by experts from around the world on taxa of relevance to medicine, ecology and industry. Entries combine phylogenetic and systematic data with insights into genetics, physiology and application. Existing entries have been revised to incorporate rapid progress and technological innovation. The new edition improves on the lucid presentation, logical layout and abundance of illustrations that readers rely on, adding color illustration throughout. Expanded to seven volumes in its print form, the new edition adds a new, searchable online version.

Reverse Shoulder Arthroplasty David M. Dines, Joshua Dines, T Bradley Edwards, 2017-10-08 The definitive book on reverse shoulder arthroplasty from leading orthopaedic shoulder surgeons This masterful book from top experts provides clinical insights on reverse shoulder arthroplasty gleaned from hands-on refinement of shoulder replacement techniques. Years of significant biomechanical and clinical research yielded invaluable knowledge that led to important improvements in functional outcome and implant durability. Among these refinements were stronger polyethylene derivatives, better ingrowth technology, and improved connection devices. As the durability and longevity of implant technology increased, younger active patients became suitable candidates for this procedure. In fact, RSA has played a pivotal role in making shoulder arthroplasty the fastest growing implant technology. In the first two sections, the authors take the reader through the history and evolution of RSA, followed by step-by-step surgical techniques for specific injuries and conditions. The next three sections discuss past and recent outcomes, complications, and rehabilitation. The last section covers special considerations including patient specific instrumentation, convertible humeral and glenoid components, and the future potential of stemless humeral technology. Key Features The latest trends in patient-specific components, guide systems, and instrument design The use of RSA for rotator cuff repair, shoulder arthritis, and acute and complex fractures In-depth discussion of techniques to improve deltoid function, avoid impingement, and increase implant longevity Clinical pearls on how to recognize and handle complications that occur: instability, infection, scapular notching, component loosening, glenoid and humeral bone loss, and RSA failure High quality videos and 300 superb illustrations further delineate techniques This book is a practical resource that enables learning complex procedures, putting them into practice, and handling complications should they arise. It is an essential tool for all orthopaedic surgeons who treat shoulder conditions.

Amphibian Conservation Rebecca K. Smith, William J. Sutherland, 2014-05-16 Amphibian Conservation is the fourth in the series of Synopses of Conservation Evidence, linked to the online resource www.ConservationEvidence.com. This synopsis is part of the Conservation Evidence project and provides a useful resource for conservationists. It forms part of a series designed to promote a more evidence-based approach to biodiversity conservation. Others in the series include bee, bird, farmland and bat conservation and many others are in preparation. Approximately 32% of the 7,164+ amphibian species are currently threatened with extinction and at least 43% of species are declining. Despite this, until recently amphibians and their conservation had received little attention. Although work is now being carried out to conserve many species, often it is not adequately documented. This book brings together and summarises the available scientific evidence and experience relevant to the practical conservation of amphibians. The authors consulted an international group of amphibian experts and conservationists to produce a thorough summary of what is known, or not known, about the effectiveness of amphibian conservation actions across the world. The book is packed with literature summaries and citations; a veritable information goldmine for graduate students and researchers. It also admirably provides decision makers with a well-researched resource of proven interventions that can be employed to stem/reverse the decline of amphibian populations. -John G Palis, Bulletin of the Chicago Herpetological Society

Planctomycetes: Cell Structure, Origins and Biology John A. Fuerst, 2013-07-20 This book introduces Planctomycetes bacteria and deals in detail with their unusual structure, physiology, genomics and evolutionary significance. It is a definitive summary of recent knowledge of this important distinctive group of bacteria, microorganisms which challenge our very concept of the bacterium. Planctomycetes, and their relatives within the PVC superphylum of domain Bacteria, including verrucomicrobia and chlamydia, challenge our classical concept of the bacterium and its modes of life and provide new experimental models for exploring evolutionary cell biology and the full diversity of how living cells can be organized internally. Unique among bacteria, they include species possessing cells with intracellular membrane-bounded compartments and a peptidoglycan-less cell wall, and bacteria such as the anammox organisms performing unique anaerobic ammonium oxidation significant for global nitrogen cycle.

Tropical Deforestation Thomas K. Rudel, Bruce Horowitz, 1993 The highly publicized obscenity trial of Radclyffe Hall's *The Well of Loneliness* (1928) is generally recognized as the crystallizing moment in the construction of a visible modern English lesbian culture, marking a great divide between innocence and deviance, private and public, New Woman and Modern Lesbian. Yet despite unreserved agreement on the importance of this cultural moment, previous studies often reductively distort our reading of the formation of early twentieth-century lesbian identity, either by neglecting to examine in detail the developments leading up to the ban or by framing events in too broad a context against other cultural phenomena. Fashioning Sapphism locates the novelist Radclyffe Hall and other prominent lesbians—including the pioneer in women's policing, Mary Allen, the artist Gluck, and the writer Bryher—within English modernity through the multiple sites of law, sexology, fashion, and literary and visual representation, thus tracing the emergence of a modern English lesbian subculture in the first two decades of the twentieth century. Drawing on extensive new archival research, the book interrogates anew a range of myths long accepted without question (and still in circulation) concerning, to cite only a few, the extent of homophobia in the 1920s, the strategic deployment of sexology against sexual minorities, and the rigidity of certain cultural codes to denote lesbianism in public culture.

Silicon-Containing Dendritic Polymers Petar R. Dvornic, Michael J Owen, 2009-01-09 During the last two decades silicon-containing dendritic polymers have become one of the fastest growing areas of development in polymer science. The eruption of interest in these new polymers stems from their unprecedented molecular architecture, unique resulting properties and the realization that they represent ideal building blocks for chemical nanotechnology. This is the first book to solely focus on silicon-containing dendritic polymers. The contributions of those experts who originally introduced each field or played a major role in its progress are reported. The developments in all major areas of this field are presented from their origins to the present. It is anticipated that this text will become an invaluable guide and vanguard of reference for experienced scientists

interested in the fields of polymer and material science, synthetic chemistry, and nanotechnology. It will also serve advanced graduate students either as a source of creative inspiration or as a textbook for appropriate courses.

The Competitiveness of Global Port-Cities OECD,2014-12-08 Ports and cities are historically strongly linked, but the link between port and city growth has become weaker. This book examines how ports can regain their role as drivers of urban economic growth and how negative port impacts can be mitigated.

Living Law Marc Hertogh,2008-12-13 This collection of essays is the first edited volume in the English language which is entirely dedicated to the work of Eugen Ehrlich. Eugen Ehrlich (1862-1922) was an eminent Austrian legal theorist and professor of Roman law. He is considered by many as one of the 'founding fathers' of modern sociology of law. Although the importance of his work (including his concept of 'living law') is widely recognised, Ehrlich has not yet received the serious international attention he deserves. Therefore, this collection of essays is aimed at 'reconsidering' Eugen Ehrlich by bringing together an interdisciplinary group of leading international experts to discuss both the historical and theoretical context of his work and its relevance for contemporary law and society scholarship. This book has been divided into four parts. Part I of this volume paints a lively picture of the Bukowina, in southeastern Europe, where Ehrlich was born in 1862. Moreover it considers the political and academic atmosphere at the end of the nineteenth century. Part II discusses the main concepts and ideas of Ehrlich's sociology of law and considers the reception of Ehrlich's work in the German speaking world, in the United States and in Japan. Part III of this volume is concerned with the work of Ehrlich in relation to that of some his contemporaries, including Roscoe Pound, Hans Kelsen and Cornelis van Vollenhoven. Part IV focuses on the relevance of Ehrlich's work for current socio-legal studies. This volume provides both an introduction to the important and innovative scholarship of Eugen Ehrlich as well as a starting point for further reading and discussion.

Nanocoalloys Florent Calvo,2013-03-12 Nanocoalloys: From Fundamentals to Emergent Applications presents and discusses the major topics related to nanocoalloys at a time when the literature on the subject remains scarce. Particular attention is paid to experimental and theoretical aspects under the form of broad reviews covering the most recent developments. The book is organized into 11 chapters covering the most fundamental aspects of nanocoalloys related to their synthesis and characterization, as well as their theoretical study. Aspects related to their thermodynamics and kinetics are covered as well. The coverage then moves to more specific topics, including optics, magnetism and catalysis, and finally to biomedical applications and the technologically relevant issue of self-assembly. With no current single reference source on the subject, the work is invaluable for researchers as the nanoscience field moves swiftly to full monetization. Encapsulates physical science of structure, properties, size, composition and ordering at nanoscale, aiding synthesis of experimentation and modelling Multi-expert and interdisciplinary perspectives on growth, synthesis and characterization of bimetallic clusters and particulates supports expansion of your current research activity into applications Synthesizes concepts and draws links between fundamental metallurgy and cutting edge nanoscience, aiding interdisciplinary research activity

The Northern Isles Alexander Fenton,1997 The Northern Isles stand at a crossroads of North Atlantic Europe, subject to the competing influences of Scandinavia and Scotland. Sandy Fenton's detailed study of the material culture of Orkney and Shetland is combined with thorough linguistic analysis and is based on years of study and sifting of a mass of detail. Much of the material is new, based on extensive research by the author, on manuscript and other written sources and on knowledge freely imparted by many local inhabitants. It illuminates the complexity of numerous interlocking factors, draws a picture of a fascinating and varied existence and reveals the past not as a static tableau but a process of continuous change. This book recreates the physical environment in which the people lived, their crops and livestock, the harvest of the sea, their houses, the food they ate. These things dominated their lives and form the background which is the key to understanding the character of these fascinating islands. This major work has earned its place as a key contribution to European ethnology and won the Dag Stromback Award of the Royal Gustav Academy, Sweden.

Genitourinary Pain and Inflammation: Jeannette M. Potts,2008-02-14 GU-ITIS is a compilation of expert creativity and opinion based upon critical review of the literature, consensus reports and the author's professional experience. Inflammation and pain caused by infectious etiologies are presented by experts in urological and gastrointestinal fields. Pain syndromes specific to the pelvic floor or genitourinary system are discussed from several perspectives. The book also includes chapters addressing iatrogenic causes of GU inflammation. Management by means of pharmacological, surgical or alternative methods are likewise presented within the context of specific disease entities, as well as separate therapeutic chapters.

Aerial and Land-based Surveys of Steller Sea Lions (Eumetopias Jubatus) in Alaska, June and July 1999 and 2000 John L. Sease,2001
Activity-Based Protein Profiling Benjamin F. Cravatt,Ku-Lung Hsu,Eranthie Weerapana,2019-01-25 This volume provides a collection of contemporary perspectives on using activity-based protein profiling (ABPP) for biological discoveries in protein science, microbiology, and immunology. A common theme throughout is the special utility of ABPP to interrogate protein function and small-molecule interactions on a global scale in native biological systems. Each chapter showcases distinct advantages of ABPP applied to diverse protein classes and biological systems. As such, the book offers readers valuable insights into the basic principles of ABPP technology and how to apply this approach to biological questions ranging from the study of post-translational modifications to targeting bacterial effectors in host-pathogen interactions.

Bronchial Asthma M. Eric Gershwin,Timothy E. Albertson,2001-04-15 They asked if the sneezes came after the wheezles, or if the first sneeze came first. It has been nearly 25 years since the first edition of this textbook was published. During that time, we have witnessed an enormous improvement in the understanding of the basic pathophysiology of asthma and, more importantly, better treatment options. However, and with regret, the incidence and prevalence of asthma during this 25 year period increased significantly. Recent studies from the NIH highlight this point and illustrate that despite improved care and diagnosis, mortality continues to rise. In fact, asthma remains the most common chronic childhood illness and is among the most common chronic adult diseases. Despite improved medications, increased awareness, and a better understanding of the pathophysiology of this disease, mortality and morbidity continue to rise. Both international and national consensus positions have been published that offer guidance on treatment approaches. The importance of the primary care physician and provider cannot be overestimated in the appropriate diagnosis and management of this disease. The management options in asthma are changing rapidly with the advent of new drugs and approaches. The recent introduction of the leukotriene inhibitors has added an entirely new class of anti-inflammatory agents in the treatment of asthma. The potential of even newer approaches, including cellular modulation of the asthma patient with specific anti-IgE antibodies, opens up exciting possible treatments.
