Multiplication Made Easy Steven James, 2012-06-01 Ask any teacher above the 4th grade what the one thing is students must know to be successful in math and the answer will be most likely be the same: math fact fluency. By the fourth and fifth grades students are generally proficient in addition and subtraction. If there is a hang-up, it is with multiplication facts...and with some students...it stops there. If a student shuts down because he or she is not given the right skills to become fluent with multiplication - the entire math engine can shut down. This does not have to happen. Multiplication Made Easy helps parents and teachers alike move students towards multiplication fact fluency. The purpose of the lessons in Multiplication Made Easy is twofold: to help students learn multiplication facts accurately and to help students learn facts with automaticity. At the first level, students can produce math facts when they have time to think and concentrate. The second level allows them to simply produce facts - automatically -- with both speed and accuracy. Some people say they simply can't learn math facts - they have tried and they can't; however, if one can learn to sing the Happy Birthday song, or Row, Row, Row Your Boat or any other song and can recall it instantaneously when needed - then that same person can indeed learn their math facts. Fluency practice helps with fact development and having the ability to automatically regurgitate math facts paves the way for future math success. This can be achieved by using the lessons in Multiplication Made Easy to chunk away at math fact mastery. Once you and your child feel he or she is proficient with chunking pages move to on to the Multiplication in a Minute lessons and math fact fluency will be attained!

No More Math Fact Frenzy Linda Ruiz Davenport, Connie S. Henry, Douglas H. Clements, Julie Sarama, 2019 Pencils ready? On your mark...get set...begin! Remember flipping over a page full of unrelated fact problems and scrambling to answer as many as possible in a minute? Remember trying to memorize math facts by rote? Many of our children are still asked to learn this way-even though research shows this approach can harm student learning more than help. Explore an effective, research-based approach to math fact instruction. *No More Math Fact Frenzy* examines this research and concludes that our approaches to math fact instruction are often ineffective. We want our students to know their math facts. We know they're better mathematicians when they're comfortable with them. Yet the ways we ask students to learn them in many classrooms remain unproductive. To address this, the authors outline three phases for helping students master their math facts. Building foundational concepts and strategies Learning more efficient reasoning strategies Meaningful, ongoing practice leading to full fact fluency Then they share recommendations for all three phrases: activities and games that build number sense, strategies that lead to flexible thinking, and ways to create and sustain a classroom culture of fluency. This kind of teaching helps students learn their math facts more successfully-and with less stress and anxiety. When we emphasize foundation concepts and reasoning strategies as the path towards building authentic fluency, students can develop their number sense, articulate their thinking, and understand the reasoning of others. -Linda Ruiz Davenport, Connie S. Henry, Douglas H. Clements, and Julie Sarama

Two Plus Two Is Not Five Susan R. Greenwald, 2006-04 This supplementary workbook is for children ages six and up, and has reproducible pages to give students an opportunity to learn the math facts. The addition and subtraction facts to 18 are taught in an original way—not just drill and practice, but by grouping and associating them with easy-to-learn methods and tricks. Each page was carefully designed; the facts are introduced with a trick and then those facts are practiced by trick name with previously learned facts, also identified by their trick name. After initial instruction, teachers/parents can assign workbook pages for class work or homework to give children practice and review. Not all students will need to do all of the pages. Cumulative practice pages include most, if not all, of the tricks taught to that point. The children will see that they can be successful in completing pages without counting on fingers or using a chart. This book will complement any mathematics curriculum, and is a perfect resource for parents, teachers, special education, and home school programs. Included in the book: Introduction, How to Use the Book, 232 workbook pages, Answer keys, Certificate of Mastery, Record-Keeping pages, Index
