Applied Water Science, Volume 2 Inamuddin,Mohd Imran Ahamed,Rajender Boddula,Tauseef Ahmad Rangreez,2021-08-26  
APPLIED WATER SCIENCE VOLUME 2 The second volume in a new two-volume set on applied water science, this book provides understanding, occurrence, identification, toxic effects and control of water pollutants in an aquatic environment using green chemistry protocols. The high rate of industrialization around the world has led to an increase in the rate of anthropogenic activities which involve the release of different types of contaminants into the aquatic environment. This generates high environmental risks, which could affect health and socio-economic activities if not treated properly. There is no doubt that the rapid progress in improving water quality and management has been motivated by the latest developments in green chemistry. Over the past decade, sources of water pollutants and the conventional methods used for the treatment of industrial wastewater treatment have flourished. Water quality and its adequate availability have been a matter of concern worldwide particularly in developing countries. According to a World Health Organization (WHO) report, more than 80% of diseases are due to the consumption of contaminated water. Heavy metals are highly toxic and are a potential threat to water, soil, and air. Their consumption in higher concentrations gives hazardous outcomes. Water quality is usually measured in terms of chemical, physical, biological, and radiological standards. The discharge of effluent by industries contains heavy metals, hazardous chemicals, and a high amount of organic and inorganic impurities that can contaminate the water environment, and hence, human health. Therefore, it is our primary responsibility to maintain the water quality in our respective countries. This book provides understanding, occurrence, identification, toxic effects and control of water pollutants in an aquatic environment using green chemistry protocols. It focuses on water remediation properties and processes including industry-scale water remediation technologies. This book covers recent literature on remediation technologies in preventing water contamination and its treatment. Chapters in this book discuss remediation of emerging pollutants using nanomaterials, polymers, advanced oxidation processes, membranes, and microalgae bioremediation, etc. It also includes photochemical, electrochemical, piezoacoustic, and ultrasound techniques. It is a unique reference guide for graduate students, faculties, researchers and industrialists working in the area of water science, environmental science, analytical chemistry, and chemical engineering. This outstanding new volume: Provides an in-depth overview of remediation technologies in water science Is written by leading experts in the field Contains excellent, well-drafted chapters for beginners, graduate students, veteran engineers, and other experts alike Discusses current challenges and

future perspectives in the field Audience: This book is an invaluable guide to engineers, students, professors, scientists and R&D industrial specialists working in the fields of environmental science, geoscience, water science, physics and chemistry.

CRC Handbook of Ion Exchange Resins Johann Korkisch,1988-12-31 The six-volume CRC Handbook of Ion Exchange Resins reviews the application of ion exchange resins to inorganic analytical chemistry. Extracted from over 6,000 original publications, it presents the information in over 1,000 tables complemented by concise descriptions of analytical methods involving virtually all the elements of the periodic table. Also, the ion exchange characteristics of the elements, as well as other important information required by analysis using ion exchange resins, are presented in separate tables. The methods that allow the multi-element analysis of complex matrices are emphasized. This work includes a general discussion of the theoretical, instrumental, and other principles underlying the various applications of ion exchange resins in inorganic analytical chemistry with special attention focused on techniques based on ion chromatography.

*Water Security* Chrispin Kowenje, Samuel Paré, Bizuneh Asfaw, 2017-07-31 Nowadays, deterioration of global fresh water resources is the most challenging question and it has become one of the forefront scientific and political agenda in relation to global environmental changes in climate, land-use, and bio-diversity. Water is not adequately available in required quantity and quality in many parts of the world especially in developing countries. Water still remains to be an essential component of life, and hence governments and other agents need to work on securing water to the society. Water security is regarded as the capacity of a population to safeguard sustainable access to adequate quantities of acceptable quality of water for sustaining livelihoods, human well-being, and socio-economic development. Thus, finding solutions to water security and related problems through strong collaboration among researchers, stakeholders, governments, non-governmental organizations and the communities is required. Therefore, stakeholders need to meet in a discussion forum such as expert workshop to explore water security related problems and to develop mitigation measures. The expert workshop also creates a co-learning environment among different experts and knowledge exchange through experiences from different parts of the world. The workshop in Mekelle, Ethiopia of the Sub-Saharan Regional Network of Exceed Swindon focused on a multidisciplinary approach to water security challenges and its solutions with special emphasis on distribution and availability of fresh and drinking waters, water scarcity, quality and pollution aspects of water, water governance, trans-boundary water resources management, and other related issues, among which are the drivers

land-use systems and climatic conditions.
