Comparative Housing Sales and Purchase Agreements Under the Malaysia, Singapore and New South Wales Housing Laws (UUM Press) Nuarrual Hilal Md. Dahlan,2011-01-01 Abandoned housing projects is one the major problems in housing industry in Peninsular Malaysia. The reasons leading to this problem are many. This catastrophe has caused multifarious problems to the stakeholders, particularly the purchasers who become the aggrieved parties. To date, there is no effective and once-and-for-all means to face the problems of abandoned housing projects. One of the factors which causes abandonment of housing projects in Peninsular Malaysia, is the lack of political will on part of the government to adopt an affirmative better housing delivery system such as the 'full build then sell system' and the introduction of a housing development insurance to face the problems of housing abandonment. This book provides in-depth analyses of the terms and conditions of the statutory standard sale and purchase agreements as enshrined in Schedules G, H, I and J of the Housing Development (Control and Licensing) Regulations 1989. The objective of this book, among others, is to identify the weaknesses of the terms of the agreements, if any, which may have contributed to the problem of abandoned housing projects and their consequential troubles. As comparative analyses, the terms and conditions of the sale and purchase agreements as applicable and enforced in the Republic of Singapore and New South Wales, Australia, are chosen. The purpose of these comparative analyses is to find the terms and conditions in these foreign jurisdictions' agreements which can be learned and adopted in the statutory standard sale and purchase agreements (Schedules G, H, I and J). It is also for the betterment of the Malaysian housing industry as a whole, and to protect the interests of the stakeholders, in particular the purchasers as against the problems of housing abandonment and its consequences.

Key Environments: Malaysia Earl of Cranbrook,2013-10-22 Of the vast area of structurally similar vegetation that forms the Far Eastern tropical rain forest block, only the forests of peninsular Malaysia lie on the mainland of Asia. Although showing some influence from this source, the flora and fauna are distinctive and exceedingly rich in species. Among other factors, this richness reflects the complex structure of the vegetation, justly famous for the extensive stands of tall trees that create the conditions to which many smaller plants, fungi and a huge variety of animals are adapted. After a century of scientific investigation, it is now possible to understand peninsular Malaysia's complex ecosystem as an essential prerequisite to the successful management for conservation and long-term productivity in the area. Compiled by authors with personal experience of the region, this book constitutes the most authoritative account of this diverse and fragile region. It is essential reading for all those interested in Malaysia and its conservation.
