Advances in Usability Evaluation Francesco Rebelo,Marcelo M. Soares,2012-07-17 Successful interaction with products, tools and technologies depends on usable designs, accommodating the needs of potential users and does not require costly training. In this context, this book is concerned about emerging concepts, theories and applications of human factors knowledge focusing on the discovery and understanding of human interaction with products and systems for their improvement. The book is organized into four sections that focus on the following subject matters: • Usability Methods and Tools • Theoretical Issues in Usability • Usability in Web Environment • Miscellaneous In the section Usability Methods and Tools, studies related with new and improved methods and tools for the advancement in the efficiency of the usability studies is reported. In this context, this book provides studies, which cover everything from checklists and heuristics development to kaizen and biometrics measurement techniques. Also, the use of tools, like eye tracker, virtual reality and augmented reality is discussed. The section Theoretical Issues in Usability concentrates on theoretical approaches of usability that allow justifying the impact of usability in our lives. Review studies about the importance of usability and connections between ergonomics and virtual reality were reported. General approaches raised the concepts of modeling and simulation to explain changes in human performance and accidents. The section Usability in Web Environment concentrates on studies associated with the use of the Internet environment and mainly discusses the development of new services and creates social communities. The section Miscellaneous shows various studies that focus on aesthetic, affective and emotional design, corporate and inclusive design.

Tetraplegia and Paraplegia Ida Bromley,2006-07-24 Extensively illustrated and easy to use, this practical resource offers clear guidelines and step-by-step sequences for moving and working with individuals with differing levels of paralysis. It serves as both an ideal student textbook and a valuable clinical manual for therapists who see tetraplegic and paraplegic patients. Clear, practical, concise chapters present important information in an easily understandable approach. Spiral-bound format enables the book to lay flat for easy reference in the clinical setting or classroom. Excellent coverage of wheelchairs and wheelchair management is included. All illustrations have been redrawn for increased clarity, to enhance the clinical usefulness of this resource. Audit and evidence-based practice is incorporated throughout. Discussion of patient empowerment is included. The chapter on hands has been expanded to provide more in-depth coverage of this important topic. New discussion of levers has been added to this edition. New chapter on aging offers insight and considerations for treating aging and elderly patients with spinal cord injury. Expanded section on equipment provides details on current and state-of-the-art equipment used in practice.

Disability, Society and Assistive Technology Bodil Ravneberg,Sylvia Söderström,2017-03-27 The provision of assistive technology is an important individual and collective service of the welfare state. The state plays a significant role towards linking users and products, and the matching of devices and users is both a science and an art. However, many people feel it is stigmatising to use individually designed assistive technologies as they often, in a subtle way, convey discriminating barriers in society. The major challenges of assistive technology are thus to reduce social exclusion and marginalisation and, importantly, to reduce individual risks and societal costs related to non-use due to deficiencies in usability, aesthetics and design of the technologies. This groundbreaking book discusses the relationships among society, disability and technology by using different empirical examples (e.g., school, everyday life) to show why the combination of disability studies and STS-studies (science, technology and society) is a fruitful approach to understanding and meeting these challenges. The book explores the significance of the technologies for users, society and the field; identifies challenges to designing, adopting and using assistive technologies; and points at theoretical challenges in research as well as professional challenges in assistive technology service provision. The book also scrutinises the role of assistive technology devices, as well as the organisational structure of the assistive technology market, in relation to disabled people's lives. This book will be valuable reading for students, academics, teachers and social educators interested in Disability Studies, STS Studies, Product Design, Sociology, Occupational Therapy and Physiotherapy, as well as engineers working in the field of assistive technology.
