*Thermodynamic Tables, Bibliography, and Property File* Harold L. Schick, 2013-09-24 Thermodynamics of Certain Refractory Compounds, Volume II: Thermodynamic Tables, Bibliography, and Property File provides information pertinent to thermodynamics as a significant theoretical tool for predicting the chemical and physical behavior of materials under diverse environmental conditions. This book presents a compilation of thermodynamic tables generated on this project. Organized into three chapters, this volume begins with an overview of the wide range in quality of thermodynamic data. This text then presents a bibliography as well as property file, which is essentially a subject index for use with the bibliography. Other chapters consider the investigation of thermodynamic properties of the given compounds. This book also presents tables labeled with the initials of the responsible scientist and the approximate date of analysis. The final chapter deals with the property file code. This book is a valuable resource for scientists and engineers.

*Molecular Beam Epitaxy of III-V Compounds* K. Ploog, K. Graf, 2012-12-06 Epitaxial growth and electronic properties of semiconductor thin films are becoming increasingly important for fundamental and applied research and for device applications. This book contains a comprehensive collection of over 1500 references covering the first 25 years of molecular beam epitaxy of III-V compound semiconductors. Molecular beam epitaxy is a versatile thin film growth technique which emerged from the 'Three-temperature method' developed in the 1950s and from surface kinetic studies performed in the 1960s. III-V semiconductors such as GaAs, AlAs, (GaIn)As, InP, etc., play an important role in the application to optoelectronic and high-speed devices. Over the past three years the technology of molecular beam epitaxy has spread rapidly to most major research and development laboratories throughout the world, and an increasing number of highly refined III-V semiconductor structures with exactly tailored electronic properties have been produced and explored for fundamental studies as well as for device application. The comprehensive bibliography on this dramatically expanding topic helps chemists, engineers, materials scientists, and physicists working in semiconductor research and development areas to sort out the important literature of their particular interest. A direct reproduction of the output of a computer printer has been used to enable rapid publication and to keep printing costs low. The work was sponsored by the 'Bundesministerium für Forschung und Technologie' of the Federal Republic of Germany. Stuttgart, January 1984 K. Ploog . K.
