The Law Lab Book Jennifer N Pahre,2021-12-27 The Law Lab Book: Case Studies for Legal Learning surveys the historical development and modern application of key areas of law in the United States. Through a collection of dynamic role-playing exercises, the book challenges students to apply the law in different scenarios and learn about the varied work of different legal professionals. The book is organized into 17 chapters. Within each chapter, students read about key legal concepts and then work together in a group as prosecutors, legislators, justices, ethics panelists, and others to resolve a Law Lab. For each Law Lab, students review the substance of the law and then consider the central issue of the lab, focusing on the facts and legal rules that apply to it. The group is challenged to work together to complete a legal test or answer questions. In doing so, they are encouraged to share their opinions, talk through legal complexities, and work toward a resolution. The book unites theoretical legal learning with concrete application, while also teaching students about the law and the legal profession. The Law Lab Book is an excellent core textbook for law survey courses or any course with the goal of introducing students to American law.

Laboratory Life Bruno Latour, Steve Woolgar, 2013-04-04 This highly original work presents laboratory science in a deliberately skeptical way: as an anthropological approach to the culture of the scientist. Drawing on recent work in literary criticism, the authors study how the social world of the laboratory produces papers and other texts, and how the scientific vision of reality becomes that set of statements considered, for the time being, too expensive to change. The book is based on field work done by Bruno Latour in Roger Guillemin's laboratory at the Salk Institute and provides an important link between the sociology of modern sciences and laboratory studies in the history of science.

*The American Lab* C. Bruce Tarter, 2018-08-01 Behind the scenes of the Lawrence

Livermore National Laboratory, the quintessential American lab. Nobel laureate Ernest O. Lawrence and renowned physicist Edward Teller founded the Lawrence Livermore National Laboratory in 1952. A new ideas incubator, the Lab was at the heart of nuclear testing and the development of supercomputers, lasers, and other major technological innovations of the second half of the twentieth century. Many of its leaders became prominent figures in the technical and defense establishments, and by the end of the 1960s, Livermore was the peer of Los Alamos National Lab, a relationship that continues today. In *The American Lab*, former Livermore director C. Bruce Tarter offers unparalleled access to the inner workings of the Lab. Touching on Cold War nuclear science and the technological shift that occurred after the fall of the Berlin Wall, he traces the Lab's evolution from its founding under University of California management through its transfer to private oversight. Along the way, he highlights important episodes in that journey, from the invention of Polaris, the first submarine-launched ballistic missile, to the Lab's controversial role in the Star Wars program. He also describes Livermore's significant responsibilities in stockpile stewardship, the program that ensures the safety and reliability of the US nuclear arsenal. The book portrays the lab's extensive work on thermonuclear fusion, a potential source of unlimited energy; describes the development of the world's largest laser fusion installation, the National Ignition Facility; and examines a number of smaller projects, such as the Lab's participation in founding the Human Genome Project. Finally, it traces the relationship of the Lab to its federal sponsor, the Department of Energy, as it evolved from partnership to compliance with orders, a shift that affected all of the national laboratories. Drawing on oral histories, internal laboratory documents, and the author's personal experiences from more than fifty years as a Lab employee, *The American Lab* is an illuminating history of the Lab and its revolutionary work.
