The Lloyd Cotsen Study Collection of Chinese Bronze Mirrors Suzanne E. Cahill, 2012-05-30 The Lloyd Cotsen Study Collection of Chinese Bronze Mirrors is a 2009 co-publication of the Cotsen Occasional Press and the UCLA Cotsen Institute of Archaeology Press. Volume I, *The Lloyd Cotsen Study Collection of Chinese Bronze Mirrors: Catalogue*, includes an engaging foreword by Lloyd Cotsen, an overview of major Chinese dynasties and periods, and a brief history of Chinese bronze mirrors by Suzanne E. Cahill. This volume presents a detailed catalogue of the extensive Cotsen Collection through high-quality images and illustrations of the mirrors in their approximate chronological sequence. Volume II, a set of eleven scholarly essays, goes further to investigate these mirrors as a study collection. Guided by the conviction that this particular constellation of mirrors may lead to substantive insights that cannot easily be obtained otherwise, the leading scholars who contributed to this volume used the materials in Volume I as a point of departure for explorations of topics of their own choice. The publication of this two-volume set preceded an exhibition of the mirrors at the Huntington Library, Art Museum and Botanical Gardens and the return of the collection to China in recognition of that countrys rightful cultural patrimony.

HCI International 2021 - Late Breaking Posters Constantine Stephanidis, Margherita Antona, Stavroula Ntoa, 2021-11-05 This two-volume set CCIS 1498 and CCIS 1499 contains the late breaking posters presented during the 23rd International Conference on Human-Computer Interaction, HCII 2021, which was held virtually in July 2021. The total of 1276 papers and 241 posters included in the 39 HCII 2021 proceedings volumes was carefully reviewed and selected from 5222 submissions. Additionally, 174 papers and 146 posters are included in the volumes of the proceedings published after the conference, as "Late Breaking Work" (papers and posters). The posters presented in these two volumes are organized in topical sections as follows: HCI Theory and Practice; UX Design and Research in Intelligent Environments; Interaction with Robots, Chatbots, and Agents; Virtual, Augmented, and Mixed Reality; Games and Gamification; HCI in Mobility, Transport and Aviation; Design for All and Assistive Technologies; Physiology, Affect and Cognition; HCI for Health and Wellbeing; HCI in Learning, Teaching, and Education; Culture and Computing; Social Computing; Design Case Studies; User Experience Studies.

Everything About Gravity - Proceedings Of The Second Lecospa International Symposium Chen Pisin, 2016-12-29 The proceedings of the 2nd LeCosPA International Symposium, *Everything about Gravity*, collects 78 papers contributed by the symposium's Plenary Session and Parallel Session speakers. Organizers of the Parallel Sessions have in addition prepared summaries for their own sessions. The topics range from quasi-local energy in GR in the presence of gravitational radiations, a gauge theory perspective of gravity, naked black hole firewalls related to the black hole information loss paradox, a new theory of spacetime quantization, relations between the Schwinger effect and the Hawking radiation and Unruh effect, conformal frames in cosmology, surprises in nonrelativistic naturalness, inflation and tensor fluctuations, emergent spacetime for quantum gravity, understanding strongly coupled magnetism through holographic principle, the detections of dark matter, ultra-high energy cosmic neutrinos and cosmic rays, etc. Last but not least, the closing remark delivered by John Ellis raised the following question: Does cosmological inflation require a modification of Einstein's gravity? After 100 years of remarkable success of Einstein's general relativity, the development of a successful quantum theory of gravity has become a major goal in physics in the 21st century. This volume serves as a valuable reference for scientists who are interested in frontier research topics of gravity.

The TGF-[beta] Family Rik Derynck, Kōhei Miyazono, 2008 Transforming growth factor-[beta] (TGF-[beta]), identified nearly three decades ago, is a secreted polypeptide that functions in critical cell cycle processes, including

cellular proliferation, differentiation, and development: It belongs to a large protein family that, in humans, contains 33 members, including activins, inhibins, bone morphogenetic proteins, growth and differentiation factors, and Mullerian inhibiting substance. This volume draws on the world's leading laboratories to comprehensively cover all aspects of the biology of TGF-[beta] and related factors. In addition to providing historical and background information, it describes the cell biology and signaling pathways of TGF-[beta] members in detail, including the roles of TGF-[beta] factors in the development and physiology of humans and model organisms. The last few chapters are devoted to the role of TGF-[beta] members in cancer and other diseases, as well as the possibilities for therapeutics based on knowledge of signaling pathways and macromolecular structures. It serves as a comprehensive reference work for both specialists and researchers less familiar with the field.

Fusion Part A Edward Teller,2012-12-02 Fusion, Volume I: Magnetic Confinement, Part A is the first of the two-part volume that covers the complexity and application of controlled magnetic fusion. This book is divided into seven chapters and starts with a brief historical overview and some properties of controlled fusion. The subsequent chapters deal with the principles, thermodynamic stability, and configuration of Tokamak plasma. These topics are followed by discussions of the variations and application of stellarators; the concepts of mirror theory; and the establishment of the experimental basis of the mirror-confinement physics. The last chapter focuses on the principles, configuration, and application of the reversed-field pinch. This book will prove useful to physicists, physics students, and researchers.

Mathematics and Art Lynn Gamwell,2016 This is a cultural history of mathematics and art, from antiquity to the present. Mathematicians and artists have long been on a quest to understand the physical world they see before them and the abstract objects they know by thought alone. Taking readers on a tour of the practice of mathematics and the philosophical ideas that drive the discipline, Lynn Gamwell points out the important ways mathematical concepts have been expressed by artists. Sumptuous illustrations of artworks and cogent math diagrams are featured in Gamwell's comprehensive exploration. Gamwell begins by describing mathematics from antiquity to the Enlightenment, including Greek, Islamic, and Asian mathematics. Then focusing on modern culture, Gamwell traces mathematicians' search for the foundations of their science, such as David Hilbert's conception of mathematics as an arrangement of meaning-free signs, as well as artists' search for the essence of their craft, such as Aleksandr Rodchenko's monochrome paintings. She shows that self-reflection is inherent to the practice of both modern mathematics and art, and that this introspection points to a deep resonance between the two fields: Kurt Gödel posed questions about the nature of mathematics in the language of mathematics and Jasper Johns asked What is art? in the vocabulary of art. Throughout, Gamwell describes the personalities and cultural environments of a multitude of mathematicians and artists, from Gottlob Frege and Benoît Mandelbrot to Max Bill and Xu Bing. Mathematics and Art demonstrates how mathematical ideas are embodied in the visual arts and will enlighten all who are interested in the complex intellectual pursuits, personalities, and cultural settings that connect these vast disciplines.
