Key Influences on the Early and Rapid Internationalization in the Airline Industry. A Case Study on easyJet Johannes Michl, 2016-09-12 Master's Thesis from the year 2016 in the subject Business economics - Miscellaneous, grade: 1,0, , course: International Management, language: English, abstract: This dissertation analyses the key influences on the emergence of Born Global Firms (BGFs) in the airline industry. Thus, it helps to contribute to the general knowledge on the topic known to date and to be an inspiration for future studies in this area. At the centre of attention is the question what key influences favoured the early and rapid internationalization in the case of the low cost airline easyJet. In order to answer this question the appropriate methodology of a single case study content analysis approach was chosen. Hence reference is made to various documents and archival records such as books, company documents, company websites, journal articles, newspaper articles, official statistical data and other Internet sources. The time period under consideration is from the foundation of the firm to the first internationalization steps. The results show that the market conditions of the low state protection in the home country, the strong opportunistic behaviour of easyJet when selecting the host country, the high internationality and extensive use of technology in the airline industry has promoted the early and rapid internationalization of easyJet. Further the findings recommend that majority of easyJet's resources had a positive influence on early and rapid internationalization. The most important key influences could be identified in the Human Resources. Thus the founder of easyJet is a young, confident, international experienced man who possesses a positive mind-set, an international vision and a high risk-tolerance. Missing industry knowledge of the founder is compensated through the extension of the senior management. Thus, we can conclude that the decisive aspect of whether or not to internationalize lies with the attitudes of senior management. In many cases it requires a "paradigm shift" in order to move toward the BGF model.

Progress in Modeling and Simulation of Batteries John Turner,2016-06-15 Modeling and simulation of batteries, in conjunction with theory and experiment, are important research tools that offer opportunities for advancement of technologies that are critical to electric motors. The development of data from the application of these tools can provide the basis for managerial and technical decision-making. Together, these will continue to transform batteries for electric vehicles. This collection of nine papers presents the modeling and simulation of batteries and the continuing contribution being made to this impressive progress, including topics that cover: • Thermal behavior and characteristics • Battery management system design and analysis • Moderately high-fidelity 3D capabilities • Optimization Techniques and Durability As electric vehicles continue to gain interest from manufacturers and consumers alike, improvements in economy and affordability, as well as adoption of alternative fuel sources to meet government mandates are driving battery research and development. Progress in modeling and simulation will continue to contribute to battery improvements that deliver increased power, energy storage, and durability to further enhance the appeal of electric vehicles.
