**Enterprise Information Systems VII** Chin-Sheng Chen,Joaquim Filipe,Isabel Seruca,José Cordeiro,2007-09-20 The purpose of the 7th International Conference on Enterprise Information Systems (ICEIS) was to bring together researchers, engineers and practitioners interested in the advances and business applications of information systems. ICEIS focuses on real world applications, therefore authors were asked to highlight the benefits of Information Technology for industry and services. Papers included in the book are the best papers presented at the conference.

*Essential Oil Research* Sonia Malik,2019-06-07 This book highlights the advances in essential oil research, from the plant physiology perspective to large-scale production, including bioanalytical methods and industrial applications. The book is divided into 4 sections. The first one is focused on essential oil composition and why plants produce these compounds that have been used by humans since ancient times. Part 2 presents an update on the use of essential oils in various areas, including food and pharma industries as well as agriculture. In part 3 readers will find new trends in bioanalytical methods. Lastly, part 4 presents a number of approaches to increase essential oil production, such as in vitro and hairy root culture, metabolic engineering and biotechnology. Altogether, this volume offers a comprehensive look at what researchers have been doing over the last years to better understand these compounds and how to explore them for the benefit of the society.

*Viticulture and Winemaking under Climate Change* Helder Fraga, 2019-12-19 The importance of viticulture and the winemaking socio-economic sector is acknowledged worldwide. The most renowned winemaking regions show very specific environmental characteristics, where climate usually plays a central role. Considering the strong influence of weather and climatic factors on grapevine yields and berry quality attributes, climate change may indeed significantly impact this crop. Recent trends already point to a pronounced increase in growing season mean temperatures, as well as changes in precipitation regimes, which have been influencing wine typicity across some of the most renowned winemaking regions worldwide. Moreover, several climate scenarios give evidence of enhanced stress conditions for grapevine growth until the end of the century. Although grapevines have high resilience, the clear evidence for significant climate change in the upcoming decades urges adaptation and mitigation measures to be taken by sector stakeholders. To provide hints on the abovementioned issues, we have edited a Special Issue entitled “Viticulture and Winemaking under Climate Change”. Contributions from different fields were considered, including crop and climate modeling, and potential adaptation measures against these threats. The current Special Issue allows for the expansion of scientific knowledge in these particular fields of research, as well as providing a path for future research.

**Индоевропейский словарь с ностратическими этимологиями**  
Арон Долгопольский, 2017-09-05 Настоящая монография представляет собой трехтомное посмертное издание труда выдающегося советского и российского лингвиста А. Б. Долгопольского, одного из крупнейших и всемирно признанных специалистов по сравнительно-историческому языкознанию и изучению дальнего родства языков. «Индоевропейский словарь с ностратическими этимологиями» составлен автором на основе главного труда его жизни – «Ностратического словаря», работу над которым А. Б. Долгопольский неотрывно и интенсивно вёл почти полвека. Основной своей задачей автор считает определение и доказательство ностратических истоков индоевропейской лексики, поиск регулярных соответствий между лексическими

единицами индоевропейских языков и языков других семей Старого Света. Словарь содержит 1397 вхождений, представляющих собой реконструированные корни индоевропейского праязыка с указанием их потомков в языках индоевропейской семьи и внешних соответствий в других семьях ностратических языков. Как по широте охвата лингвистического материала, так и по глубине разработки каждой словарной единицы словарь представляет собой уникальный материал для анализа и предназначен не только для лингвистов, изучающих индоевропейские языки, но и для специалистов по сравнительно-историческому изучению языков других семей.

*Remote Sensing of Biosphere Functioning* Richard J.

Hobbs, Harold A. Mooney, 2012-12-06 Harold A. Mooney and Richard J. Hobbs At present there is enormous concern about the changes that are occurring on the surface of the earth and in the earth's atmosphere, primarily as a result of human activities. These changes, particularly in the atmosphere, have the potential for altering the earth's habitability. International programs unprecedented in scope, including the International Geosphere Biosphere Program, have been initiated to describe and understand these changes. The global change program will call for coordinated measurements on a global scale of those interactive physical and biological processes that regulate the earth system. The program will rely heavily on the emerging technology of remote sensing from airborne vehicles, particularly satellites. Satellites offer the potential of continuously viewing large segments of the earth's surface, thus documenting the changes that are occurring. The task, however, is not only to document global change, which will be an enormous job, but also to understand the significance of these changes to the biosphere. Effects on the biosphere

may cover all spatial scales from global to local. The possibility of measuring biosphere function remotely and continuously from satellite imagery must be explored quickly and thoroughly in order to meet the challenge of understanding the consequences of global change. Initial guidelines and approaches are currently being formulated (Dyer and Crossley, 1986; JOI, 1984; NAS, 1986; Rasool, 1987). There are many conceptual and technical issues that must be resolved H. A. Mooney and R. J.

### **PLANT BREEDING: Classical to Modern P. M.**

Priyadarshan, 2019-11-09 This book offers a detailed overview of both conventional and modern approaches to plant breeding. In 25 chapters, it explores various aspects of conventional and modern means of plant breeding, including: history, objective, activities, centres of origin, plant introduction, reproduction, incompatibility, sterility, biometrics, selection, hybridization, methods of breeding both self- and cross-pollinated crops, heterosis, synthetic varieties, induced mutations and polyploidy, distant hybridization, quality breeding, ideotype breeding, resistance breeding, breeding for stress resistance, G x E interactions, tissue culture, genetic engineering, molecular breeding, genomics, gene action and varietal release. The book's content addresses the needs of students worldwide. Modern methods like molecular breeding and genomics are dealt with extensively so as to provide a firm foundation and equip readers to read further advanced books. Each chapter discusses the respective subject as comprehensively as possible, and includes a section on further reading at the end. Info-boxes highlight the latest advances, and care has been taken to include nearly all topics required under the curricula of MS programs. As such, the book provides a much-needed reference guide for MS students around the globe.
