Multimedia Systems and Techniques Borko Furht, 2012-12-06 Multimedia computing has emerged in the last few years as a major area of research. Multimedia computer systems have opened a wide range of applications by combining a variety of information sources, such as voice, graphics, animation, images, audio and full-motion video. Looking at the big picture, multimedia can be viewed as the merging of three industries: computer, communications, and broadcasting industries. Research and development efforts can be divided into two areas. As the first area of research, much effort has been centered on the stand-alone multimedia workstation and associated software systems and tools, such as music composition, computer-aided education and training, and interactive video. However, the combination of multimedia computing with distributed systems offers even greater potential. New applications based on distributed multimedia systems include multimedia information systems, collaborative and video conferencing systems, on-demand multimedia services, and distance learning. Multimedia Systems and Techniques is one of two volumes published by Kluwer, both of which provide a broad introduction into this fast moving area. The book covers fundamental concepts and techniques used in multimedia systems. The topics include multimedia objects and related models, multimedia compression techniques and standards, multimedia interfaces, multimedia storage techniques, multimedia communication and networking, multimedia synchronization techniques, multimedia information systems, scheduling in multimedia systems, and video indexing and retrieval techniques. Multimedia Systems and Techniques, together with its companion volume, Multimedia Tools and Applications, is intended for anyone involved in multimedia system design and applications and can be used as a textbook for advanced courses on multimedia.

Everything You and Your Teachers Need to Know About the Learning Brain Sabine Peters,Nienke van Atteveldt,Jessica Massonnié,Stephan E. Vogel,2020-12-08 Children go to school to learn, and learning takes place in the brain. In the age period of formal schooling, a child's brain is still undergoing major developmental changes. For these reasons, neuroscience (the study of the brain) and education are closely connected. Learning is possible because the brain is plastic: plasticity refers to the capacity of the brain to reorganize its structure and thereby change function and behavior. But what exactly changes in the brain when we learn something new? What are optimal conditions for the brain to learn? Why do we also forget things? What developmental changes occur in the brain during childhood and adolescence, and how are these processes different or similar to the neural mechanisms of learning and memory? Neuro-imaging research, or 'brain scanning', has accelerated our current understanding of brain development, learning, memory and other school-related skills such as reading and math but also creativity, metacognition and learning-related emotions and anxieties. But what do these brain scanning techniques actually measure? What kind of questions can we address with neuro-imaging, and what are the limitations? In this Collection, we will provide an accessible overview of the current state-of-the-art insights into the mechanisms of brain development, learning and memory. The collection will help children understand how their brains learn and develop, and how these processes are shaped by their environment and their own efforts. Moreover, we will discuss why it is important that their teachers and other educational practitioners know about the brain and neuroscience methods. Finally, we will also explain what happens if wrong ideas about the brain circulate, or the correct knowledge is misinterpreted. Neuromyths such as 'we only use 10 percent of our brain' are persistent, but important to counter with

explaining why they are false, and what is true instead.

Arts-Based Educational Research and Qualitative Inquiry Thalia M. Mulvihill, Raji Swaminathan, 2019-11-04 Awarded QRSIG's Honorable Mention for 2021 2020 AESA Critics' Choice Book Award Winner Arts-Based Educational Research and Qualitative Inquiry introduces novice qualitative researchers, within education and related fields, to arts-based educational research (ABER). Abundant prompts and exercises are provided to help readers apply the concepts and experiment with various applications of the ideas presented. The authors walk the path with novice researchers offering a variety of approaches to the practice of arts-based methods, while providing a guided overview of ABER, and include pedagogical features in each chapter. Exercises are designed to assist educational researchers who wish to expand their repertoire of methodologies. The authors also weave into the discussion the possibilities and limitations of many types of arts-based methods while introducing readers to the growing methodological literature. By offering a tapestry of ways to engage the novice researcher, the book illustrates that it is not always possible to separate cognitive findings from aesthetic knowing. This book will help qualitative researchers to expand their methodologies to include arts-based approaches to their projects and by doing so reshape their identities as qualitative researchers. It also offers some evaluative criteria and tool kits for experimenting with various arts and educational research.
