Leopard Gecko Care: The Complete Guide to Caring for and Keeping Leopard Geckos as Pets Tabitha Jones,2019-03-05 Leopard geckos have become a very popular, and common, pet and have been extensively bred within the United States over the last thirty years. Due to the extensive breeding there are multiple different colour morphs available which adds to the desirability of the leopard gecko as a pet. The leopard gecko (scientifically known as *Eublepharis macularius*) is a crepuscular ground-dwelling lizard. Unlike the majority of other gecko species, the leopard gecko possesses moveable eyelids which gives the gecko an anthropomorphic quality. The specie's extraordinary set of eyelids is the basis for the scientific name. *Eublepharis* is a combination of the Greek words *Eu*, meaning 'good,' and *Blephar*, meaning 'eyelid.' The name *Macularius* is derived from the Latin word *Macula* which translates to 'spot' or 'blemish' which is in obvious reference to the animal's spotted markings. They are naturally found in the deserts of Asia, Pakistan and northern India. This book was previously published by 'Pet Care Professionals' under the same name.

Raising a Leopard Gecko Carl Juan,2024-01-02 The leopard gecko, or Eublepharis macularius, is a genus and species of lizard. A number of countries in Asia, including Afghanistan, Pakistan, and India, are home to these geckos because of their dry climate. They are well-liked as pets because of their cute look, low maintenance needs, and manageable size. The spots or markings on a leopard gecko's skin, which can range in color and design, are what give the species its name. Their maximum adult size is between 6 and 10 inches (15 and 25 cm). Nighttime is prime time for these geckos because they are nocturnal. In terms of care, leopard geckos require a sufficient cage with proper heating and lighting, a substrate for them to dig in, a variety diet of insects, and a steady temperature and humidity level. Their easygoing nature makes them a good alternative for those with no prior experience caring for reptiles. In response to threats from predators, leopard geckos have evolved the ability to regenerate lost tails. A gecko's tail can detach if it's seized or hurt, and it will continue to wag, distracting the predator while the gecko makes its getaway. A new tail will grow in time, albeit it might not be an exact replica of the old one. The leopard gecko is a popular pet lizard due to its unique look, low maintenance requirements, and remarkable abilities, such as the ability to lose and regrow its tail.
