Dingo Claire Saxby,2020-12-01 Poetic language and glorious illustrations follow a dingo from the comfort of her pack into the darkening landscape in search of food for her family. Can you see her? There — deep in the stretching shadows — a dingo. Her pointed ears twitch. Her tawny eyes flash in the low-slung sun. Dingo leaves her sleeping pups with her mate and lifts her head to smell the air. Dusk is a busy time — the time for hunting. Softly and fleetly she runs through the forest, past a possum, a wombat, and kangaroos in the gully below. Now she climbs to the highest point and sniffs again, locating the scent of rabbits in the wind. Interspersed with text offering facts for curious readers, Dingo is a lyrical foray into the life of these fascinating wild dogs.

How to Make an Apple Pie and See the World Marjorie Priceman,2014-05-28 Illus. in full color. An apple pie is easy to make...if the market is open. But if the market is closed, the world becomes your grocery store. This deliciously silly recipe for apple pie takes readers around the globe to gather ingredients. First hop a steamboat to Italy for the finest semolina wheat. Then hitch a ride to England and hijack a cow for the freshest possible milk. And, oh yes! Don't forget to go apple picking in Vermont! A simple recipe for apple pie is included. Libraries should consider purchasing multiple copies since every preschool and primary-grade teacher in town will want a copy to read.--(starred) Booklist.

The Wonder Weeks Frans X. Plooij,Hetty van de Rijt,Xaviera Plas,2017-09-05 This is not a book about how to make your child into a genius, however. We firmly believe that every child is unique and intelligent in his own way. It is a book on how to understand and cope with your baby when he is difficult and how to enjoy him most as he grows. It is about the joys and sorrows of growing with your baby.--Publisher's website.

Foreign Direct Investment, Trade and Economic Growth Shahid Ahmed, 2014-04-17 This volume examines the opportunities and challenges in Foreign Direct Investment (FDI) and trade, particularly service trade, for developing and emerging economies in a globalised world. Using comprehensive case studies from India, Pakistan, Bangladesh, Association of Southeast Asian Nations (ASEAN) and other South Asian Association for Regional Cooperation (SAARC) countries, it explores various channels through which trade and FDI affect the process of economic growth and development. In particular, it determines growth trajectories impelled by service trade (such as telecommunications, transport, finance and distribution), where developing countries are playing an increasingly significant role. It also discusses value chains and production networks in the backdrop of the financial crisis of 2008. Combining theoretical and empirical tools, rigorous methodology and latest data, this work will serve as an important resource for formulation of international trade and economic policies in developing countries. It will be of special interest to students, researchers and policy makers dealing with international trade and FDI, and those in economics, commerce, business & management and political science.

A New Vision, a New Heart, a Renewed Call David Claydon, 2005

Systemic and Systematic Risk Management Joseph E. Kasser, 2020-05-14 This book discusses risk management as it applies to problem-solving for simple, complex and wicked problems faced by policy creators and implementors, project managers and systems engineers in the context of policies, large engineering projects (LEPs), projects and systems. When applying systems thinking to risk management, it can be seen that risk management applies to almost every action taken in daily life. This book: Introduces the systems approach of integrating risk management into policy creation and implementation, project management and systems engineering, such as the risk framework and the Firm Fixed Price (FFP) contract with penalties and bonuses. Introduces a number of out-of-the box concepts building on the application of the systems thinking tools in the system thinker's toolbox. Points out that integrating risk management into policy and project management and systems engineering is just good management and engineering practice. Discusses the flow of risk in a policy from creation through implementation via LEPs and simpler projects, identifying where risks arise and where they should be dealt with. Presents the risks in the relationship between policy creation, implementation, project management and systems engineering. Discusses risks throughout the policy implementation process and shows how the nature of risks changes from political to financial to technological as implementation proceeds. Discusses managing complexity and specifies the minimum number of elements in a system for it to be defined as, and managed as, complex. Points out that in most instances the traditionally ignored major implementation risk is that of poor performance by personnel. Shows how to proactively incorporate prevention into planning in order to prevent risks, as well as how to mitigate them when they occur.

Strange Quarks In Hadrons, Nuclei And Nuclear Matter - Proceedings Of The International Workshop Kenneth H Hicks, 2001-02-28 This proceedings volume brings together the contributions of experts from different fields within the nuclear physics community. Topics such as rare kaon decays, astrophysics, relativistic heavy ion collisions, and few-GeV electromagnetic probes are covered. The strange quark plays a vital role in understanding such diverse phenomena as CP violation (article by Lincoln Wolfenstein), the "spin crisis" (article by Brad Filipone), and supernova explosions (article by Chris Fryer).

Additional topics of interest are parity violation experiments, strangeness content of the proton, and enhanced strangeness production at CERN and RHIC. This unique blend of recent results, with a focus on the role of the strange quark, shows the prominence of strangeness in nuclear physics over the past 50 years.

Insect Biodiversity Robert G. Foottit, Peter H. Adler, 2018-06-05 Volume Two of the new guide to the study of biodiversity in insects Volume Two of *Insect Biodiversity: Science and Society* presents an entirely new, companion volume of a comprehensive resource for the most current research on the influence insects have on humankind and on our endangered environment. With contributions from leading researchers and scholars on the topic, the text explores relevant topics including biodiversity in different habitats and regions, taxonomic groups, and perspectives. Volume Two offers coverage of insect biodiversity in regional settings, such as the Arctic and Asia, and in particular habitats including crops, caves, and islands. The authors also include information on historical, cultural, technical, and climatic perspectives of insect biodiversity. This book explores the wide variety of insect species and their evolutionary relationships. Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population, and examine the consequences that an increased loss of insect species will have on the world. This important text: Offers the most up-to-date information on the important topic of insect biodiversity Explores vital topics such as the impact on insect biodiversity through habitat loss and degradation and climate change With its companion Volume I, presents current information on the biodiversity of all insect orders Contains reviews of insect biodiversity in culture and art, in the fossil record, and in agricultural systems Includes scientific approaches and methods for the study of insect biodiversity The book offers scientists, academics, professionals, and students a guide for a better understanding of the biology and ecology of insects, highlighting the need to sustainably manage ecosystems in an ever-changing global environment.

Sustainable Agriculture Volume 2 Eric Lichtfouse, Marjolaine Hamelin, Mireille Navarrete, Philippe Debaeke, 2011-02-09 This book gathers review articles that analyze current agricultural issues and knowledge, then propose alternative solutions. Effective Supervision Robert J. Marzano, Tony Frontier, David Livingston, 2011-05-05 In *Effective Supervision*, Robert J. Marzano, Tony Frontier, and David Livingston show school and district-level administrators how to set the priorities and support the practices that will help all teachers become expert teachers. Their five-part framework is based on what research tells us about how expertise develops. When these five conditions are attended to in a systematic way, teachers do improve their skills: * A well-articulated knowledge base for teaching * Opportunities for teachers to practice specific strategies or behaviors and to receive feedback * Opportunities for teachers to observe and discuss expertise * Clear criteria for success and help constructing professional growth and development plans * Recognition of the different stages of development progressing toward expertise. The focus is on developing a collegial atmosphere in which teachers can freely share effective practices with each other, observe one another's classrooms, and receive focused feedback on their teaching strategies. The constructive dynamics of this approach always keep in sight the aim of enhancing students' well-being and achievement. As the authors note, The ultimate criterion for expert performance in the classroom is student achievement. Anything else misses the point.

Perspectives in Hadronic Physics Sigfrido Boffi, Claudio Ciofi Degli Atti, Mauro M. Giannini, 2012-12-06 This volume contains the invited and contributed papers presented at the Fourth International Conference on Perspectives in Hadronic Physics and sent to the Editors within the deadline. The Conference was held at the Abdus Salam International

Centre for Theoretical Physics (ICTP), Trieste, Italy, from May 12th to 16th, 2003, and was attended by about 100 scientists from 20 countries. The series of Conferences on Perspectives on Hadronic Physics takes place every two years since 1997 and follows the seven Workshops on Perspectives in Nuclear Physics at Intermediate Energies, organized every two years at ICTP since 1983. The aim of these Conferences is to discuss the status-of-the-art concerning the experimental and theoretical investigations of hadronic systems, from nucleons to nuclei and dense nuclear matter, in terms of the relevant underlying degrees of freedom. For such a reason the Fourth Conference has been focused on those experimental and theoretical topics which have been in the last few years the object of intensive investigations, viz. the various approaches employed to describe the structure of hadrons in terms of QCD and QCD inspired models, the recent developments in the treatment of the properties and propagations of hadronic states in the medium, the relevant progress done in the solution of the few- and many- hadron problems, the recent results in the experimental investigation of dense hadronic matter and, last but not least, the physics programs of existing Laboratories and the suggested projects for new Facilities.
