New Trends of Research in Ontologies and Lexical Resources Alessandro Oltramari,Piek Vossen,Lu Qin,Eduard Hovy,2013-02-01 In order to exchange knowledge, humans need to share a common lexicon of words as well as to access the world models underlying that lexicon. What is a natural process for a human turns out to be an extremely hard task for a machine: computers can't represent knowledge as effectively as humans do, which hampers, for example, meaning disambiguation and communication. Applied ontologies and NLP have been developed to face these challenges. Integrating ontologies with (possibly multilingual) lexical resources is an essential requirement to make human language understandable by machines, and also to enable interoperability and computability across information systems and, ultimately, in the Web. This book explores recent advances in the integration of ontologies and lexical resources, including questions such as building the required infrastructure (e.g., the Semantic Web) and different formalisms, methods and platforms for eliciting, analyzing and encoding knowledge contents (e.g., multimedia, emotions, events, etc.). The contributors look towards next-generation technologies, shifting the focus from the state of the art to the future of Ontologies and Lexical Resources. This work will be of interest to research scientists, graduate students, and professionals in the fields of knowledge engineering, computational linguistics, and semantic technologies.

Exploring Lexical Inaccuracy in Arabic-English Translation Yasir Alenazi,2022-10-31 This book presents a case study on lexical error analysis in the translation products of Arab English majors at the university level with important implications for Arabic-speaking countries. It provides detailed analyses and explanations of the main lexical areas that cause specific difficulties for these students, while also identifying their potential sources. The respective chapters discuss several areas related to the context of the research, the field of SLA, error analysis, language transfer, error taxonomies, language learning, language teaching, and translation training. The analyses and findings presented here contribute to the linguistic field by developing a comprehensive list of lexical error categories based on form, content, and origin of influence regarding translation products. In addition, the book sheds light on the pedagogical aspects contributing to the enhancement of ESL/EFL teaching in the Arab context as well as other contexts where English is taught as a foreign language. The book will help educators and curriculum writers in designing materials, and language researchers as a groundwork for their studies of L2 learners' written products.

Computational Lexical Semantics Patrick Saint-Dizier,Evelyn Viegas,1995-02-24 Lexical semantics has become a major research area within computational linguistics, drawing from psycholinguistics, knowledge representation, and computer algorithms and architecture. Research programs whose goal is the definition of large lexicons are asking what the appropriate representation structure is for different facets of lexical information. Among these facets, semantic information is probably the most complex and the least explored. Computational Lexical Semantics is one of the first volumes to provide models for the creation of various kinds of computerized lexicons for the automatic treatment of natural language, with applications to machine translation, automatic indexing, and database front-ends, knowledge extraction, among other things. It focuses on semantic issues, as seen by linguists, psychologists, and computer scientists. Besides describing academic research, it also covers ongoing industrial projects.

Translingual Words Jieun Kiaer,2018-12-12 Translingual Words is a detailed case study on lexical integration, or mediation, occurring between East Asian languages and English(es). In Part I, specific examples from global linguistic corpora are used to discuss the issues involved in lexical interaction between East Asia and the English-speaking world. Part II explores the spread of East Asian words in English, while Part III discusses English words which can be found in East Asian languages. Translingual Words presents a novel approach on hybrid words by challenging the orthodox ideas on lexical borrowing and explaining the dynamic growth of new words based on translingualism and transculturalism.

Lexical Conflict Danko Šipka,2015-09-18 The first practical study of its kind, Lexical Conflict presents a taxonomy of cross-linguistic lexical differences, with thorough discussion of zero equivalence, multiple equivalence and partial equivalence across languages. Illustrated with numerous examples taken from over one hundred world languages, this work is an exhaustive exploration of cross-linguistic and cross-cultural differences, and presents guidelines and solutions for the lexicographic treatment of these differences. The text combines theoretical and applied linguistic perspectives to create an essential guide for students, researchers and practitioners in linguistics, anthropology, cross-cultural psychology, translation, interpretation and international marketing.

Corpus Linguistics and Linguistically Annotated Corpora Sandra Kuebler,Heike Zinsmeister,2014-12-18 Linguistically annotated corpora are becoming a central part of the corpus linguistics field. One of their main strengths is the level of searchability they offer, but with the annotation come problems of the initial complexity of queries and query tools. This book gives a full, pedagogic account of this burgeoning field. Beginning with an overview of corpus linguistics, its prerequisites and goals, the book then introduces linguistically annotated corpora. It explores the different levels of linguistic annotation, including morphological, parts of speech, syntactic, semantic and discourse-level, as well as advantages and challenges for such annotations. It covers the main annotated corpora for English, the Penn Treebank, the International Corpus of English, and OntoNotes, as well as a wide range of corpora for other languages. In its third part, search strategies required for different types of data are explored. All chapters are accompanied by exercises and by sections on further reading.

Spanish Verbalisations and the Internal Structure of Lexical Predicates Antonio Fábregas,2022-07-12 Spanish Verbalisations and the Internal Structure of Lexical Predicates provides the first comprehensive and empirically detailed theoretical analysis of the different ways in which Spanish builds verbs from nouns and adjectives. This book poses questions about the nature of theme vowels, parasynthesis and the structural relation between the three major lexical word classes from within a Neo-Constructionist framework that highlights the correlations between the syntactic and semantic behaviour of verbs and their morphological make up. Provided within are detailed empirical descriptions of each of the nine major ways of building lexical verbs in Spanish, as well as an integral analysis of those patterns that shows the significance of the contrast between them and their uses to address some foundational questions in morphological theory. Spanish Verbalisations will be of particular interest to researchers in formal linguistics and Spanish. The Open Access version of this book, available at www.taylorfrancis.com, has been made available under a Creative Commons Attribution 4.0 license.

Lexical Perspectives on Transitivity and Ergativity Maarten Lemmens,1998-10-15 Fusing insights from cognitive grammar, systemic-functional grammar and Government & Binding, the present work elaborates and refines Davidse's view that the English grammar of lexical causatives is governed by the transitive and ergative paradigms, two distinct models of causation (Davidse 1991, 1992). However, on the basis of extensive synchronic and diachronic data on verbs of killing (e.g. kill, execute, choke or drown), it is shown that 'transitivity' and 'ergativity' are not absolute but prototypical characteristics of verbs which may be overruled by the semantics of the construal in which they occur. The variable transitive or ergative character of the verbs reveals the complex interaction between the semantics of the construction and that of the verb. The diachronic analyses further illustrate how in the course of time verbs may change their paradigmatic properties, either temporarily (e.g. the ergativization of strangle, throttle and smother) or permanently (e.g. the 'causativization' of starve or the partial transitivization of abort). The analyses show that these changes are semantically well-motivated and further illustrate the cognitive reality of the two causative models. The work explores the experiential basis of the prototypical paradigmatic behaviour of verbs (e.g. the ergative predilection of the SUFFOCATE verbs). In addition, it attempts to shed more light on the semantics and restrictions of certain constructions, such as the medio-passive, the derivation of adjectives in –able, or the derivation of agentive nominals in –er.

Current Perspectives in Spanish Lexical Development Irene Checa-García,Laura Marqués-Pascual,2023-10-02 New quantitative methodology and the development of corpus and experimental linguistics tools have recently made researching lexical comprehension and production more accessible. While several tools and data sets are available in English (Coh-metrix, CELEX) and a few other languages, the development of resources

and empirical research is still lacking in Spanish. This volume brings together original empirical research and theoretical perspectives that examine lexical development in Spanish L1, L2 and L3, with a focus on different teaching approaches and textbook coverage of Spanish lexicon in L2 curricula and the use of corpus linguistics in methodological investigations. Some questions addressed include the role of lexical development in mapping grammatical acquisition phases, the potential transfers of L1 to L2 lexical abilities, the effect of explicit vocabulary learning techniques in L2, how affective meaning modulates L2 acquisition, or how a typological understanding of lexical organization can help in teaching more effectively the lexicon of a language, among many others. The book offers an overview of what is currently being done in the field of Spanish lexical acquisition through a myriad of approaches and topics.

Lexical Template Morphology B. Roger Maylor,2002-04-22 While there have been many attempts in the literature to account for the semantics and syntax of individual German(ic)prefixes, this is the first time that the prefixes have been analysed in a unified way and a framework established that is capable of relating the prefixes to each other and to other areas of the grammar. The templates provide the means whereby a State/Change of State feature interacts with Figure and Ground arguments to generate prefixed verbs, noun- and adjective-incorporating verbs, and oblique case marking on the complements of simplex verbs and adjectives. This book presents a new and potentially powerful theory of lexical morphology that will be of interest not only to morphologists and those working on the grammar of German, but also syntacticians working on the Locative and Dative Alternations, and linguists whose prime concern is the organization of the lexicon, and the realization of the semantics of change of state predicates.

Machine Translation Bonnie Jean Dorr,1993 This book describes a novel, cross-linguistic approach to machine translation that solves certain classes of syntactic and lexical divergences by means of a lexical conceptual structure that can be composed and decomposed in language-specific ways. This approach allows the translator to operate uniformly across many languages, while still accounting for knowledge that is specific to each language.

A Grammatical and Exegetical Study of New Testament Verbs of Transference Paul Danove,2009-08-18 This study continues the adaptation of the method of Case Frame analysis for the investigation of the Greek text of the New Testament. Case Frame analysis distinguishes the words of a language into two categories, predicators [words that require completion by other words for their correct grammatical use] and non-predicators [words that do not require such completion], and provides rigorous procedures for describing the syntactic, semantic, and lexical requirements that predicators impose on the words that complete their meaning. The inclusion of semantic function and feature descriptions in Case Frame analysis permits the development of a new genre of lexicon that specifies not only syntactic and lexical information (as do traditional dictionaries) but detailed semantic information. The resulting Case Frame lexicon entries are both more compact and more nuanced than traditional lexicon entries. Danove conducts an exhaustive Case Frame analysis of the ditransitive verbs of transference in the New Testament. He uses this analysis to develop a set of descriptive guidelines for interpreting and translating the various usages of ditransitive verbs of transference and applies these rules in exegetical studies of the text of the New Testament to generate a Case Frame lexicon of the verbs of transference in the New Testament. This study will distinguish the requirements of the 127 New Testament verbs of transference according to four syntactic functions, twelve semantic functions, and 22 lexical realizations. This will permit a rigorous investigation of all occurrences of verbal complements with the same syntactic, semantic, and lexical attributes. The study also will consider the influence of one semantic feature [an inherent quality of words that has implications for their lexical realization] and of the 'intrusion' of four grammatical constructions [inherent structuring templates of grammar that govern syntactic, semantic, and lexical attributes and modify meaning] on each category of complements with the same syntactic, semantic and lexical description. This will produce a rigorous description of meaning that becomes the basis for Danove's contributions to the linguistic study of biblical Greek and to the exegesis of biblical texts.

The Lexical Basis of Sentence Processing Paola Merlo,Suzanne Stevenson,2002-07-11 Lexical effects on language processing are currently a major focus of attention in studies of sentence comprehension. This thematic collection provides a uniquely multi-faceted and integrated viewpoint on key aspects of lexicalist theories, drawing from the fields of theoretical linguistics, computational linguistics, and psycholinguistics. The focus of this stimulating volume is on a number of central topics: The discussion of foundational issues concerning the nature of the lexicon and its relationship to sentence understanding; the exploration of the relationship between syntactic and lexical processing; and the investigation of the specific content of lexical entries, especially for verbs. The authors draw on a range of methodologies, from computational modeling to corpus studies to behavioral and neuro-imaging experimental techniques. The breadth of topics and methodologies is brought together by the articulated, critical analysis of the field provided in the introduction. The research reported here elaborates both the structure and the probabilistic content of lexical representations, and meets up with work in computer science, linguistics, psychology, and philosophy on the relation between conceptual, grammatical, and statistical knowledge.

Language Contact and Lexical Enrichment in Israeli Hebrew G. Zuckermann,2003-11-04 Israeli Hebrew is a spoken language, 'reinvented' over the last century. It has responded to the new social and technological demands of globalization with a vigorously developing multisourced lexicon, enriched by foreign language contact. In this detailed and rigorous study, the author provides a principled classification of neologisms, their semantic fields and the roles of source languages, along with a sociolinguistic study of the attitudes of 'purists' and ordinary native speakers in the tension between linguistic creativity and the preservation of a distinct language identity.

Lexical Ambiguity Resolution Geert Adriaens,Steven Lawrence Small,Garrison Weeks Cottrell,Michael K. Tanenhaus,1988 The most frequently used words in English are highly ambiguous; for example, Webster's Ninth New Collegiate Dictionary lists 94 meanings for the word run as a verb alone. Yet people rarely notice this ambiguity. Solving this puzzle has commanded the efforts of cognitive scientists for many years. The solution most often identified is context: we use the context of utterance to determine the proper meanings of words and sentences. The problem then becomes specifying the nature of context and how it interacts with the rest of an understanding system. The difficulty becomes especially apparent in the attempt to write a computer program to understand natural language. Lexical ambiguity resolution (LAR), then, is one of the central problems in natural language and computational semantics research. A collection of the best research on LAR available, this volume offers eighteen original papers by leading scientists. Part I, Computer Models, describes nine attempts to discover the processes necessary for disambiguation by implementing programs to do the job. Part II, Empirical Studies, goes into the laboratory setting to examine the nature of the human disambiguation mechanism and the structure of ambiguity itself. A primary goal of this volume is to propose a cognitive science perspective arising out of the conjunction of work and approaches from neuropsychology, psycholinguistics, and artificial intelligence--thereby encouraging a closer cooperation and collaboration among these fields. Lexical Ambiguity Resolution is a valuable and accessible source book for students and cognitive scientists in AI, psycholinguistics, neuropsychology, or theoretical linguistics.
