The Open-hearth Cookbook Suzanne Goldenson,Doris Simpson,2005-10 Food cooked in the fireplace tastes better than food cooked in most conventional methods today, say the authors and this book shows how twenty-first century folks can enjoy hearth-cooked meals today. Surprisingly few pieces of special equipment are needed, especially for camping families. The authors emphasize the appliances and techniques that make open-hearth cooking realistic in today's homes where the fireplace is not in the kitchen. The authors explain the art of building a good cooking fire and maintaining the three basic temperatures - low, medium and high - needed to prepare almost all foods, and suggest ways to keep the hearth clean and the cook safe. Each chapter on technique tells how things were done in the old days, and then goes on to demonstrate techniques for today. The authors have added substantial new material since original publication in 1982, and completely updated the resources section of the book. Suzanne Goldenson and her husband are serious cooks and collectors of early American cooking implements. Doris Simpson is co-owner of a restaurant and once helped cook a Thanksgiving dinner over an open hearth for Craig Claiborne.

Analysing Architecture Simon Unwin,2020-12-30 Now in its fifth edition, Analysing Architecture has become internationally established as the best introduction to architecture. Aimed primarily at those studying architecture, it offers a clear and accessible insight into the workings of this rich and fascinating subject. With copious illustrations from his own notebooks, the author dissects examples from around the world and all periods of history to explain the underlying strategies in architectural design and show how drawing may be used as a medium for analysis. In this new edition Analysing Architecture has been revised and expanded. Notably, the chapter on 'How Analysis Can Help Design' has been redeveloped to clearly explain this crucially important aspect of study to a beginner readership. Four new chapters have been added to the section dealing with Themes in Spatial Organisation, on 'Axis', 'Grid', 'Datum Place' and 'Hidden'. Material from the 'Case Studies' in previous editions has been redistributed amongst earlier chapters. The 'Introduction' has been completely rewritten; and the format of the whole book has been adjusted to allow for the inclusion of more and better illustrative examples. Works of architecture are instruments for managing, orchestrating, modifying our relationship with the world around us. They frame just about everything we do. Architecture is complex, subtle, frustrating... but ultimately extremely rewarding. It can be a difficult discipline to get to grips with; nothing in school quite prepares anyone for the particular demands of an architecture course. But this book will help.
