**The Handbook for School Safety and Security**
Lawrence Fennelly,Marianna Perry,2014-08-19 School security is one of the most pressing public concerns today. Yet in most schools, there is little security expertise or detailed knowledge about how to implement and manage a security program. The Handbook for School Safety and Security rectifies this problem by providing the salient information school administrators and security professionals need to address the most important security issues schools face. Made up of contributions from leading experts in school security, The Handbook for School Safety and Security provides a wealth of practical information for securing any K-12 school. It discusses key approaches and best practices for school crime prevention, including such topics as crisis management and mass notification. It also covers the physical measure needed for protecting a school, including detailed discussions of access control, lighting, alarms, and locks. While there is no single fix for the myriad of security

challenges facing today's school security professionals, the best practices found in The Handbook for School Safety and Security will help increase the safety and security of any school. Brings together the collective experience of industry-leading subject matter specialists into one resource. Covers all the key areas needed for developing and implementing a school security program. Includes a list of 100 things to know when developing a school security program.

  *The Security of Sea Lanes of Communication in the Indian Ocean Region* Dennis Rumley,Sanjay Chaturvedi,Mat Taib Yasin,2016-03-31 First published in 2007, this book focuses on the security of sea lanes of communication. It was a joint publication between the Maritime Institute of Malaysia (MIMA) and the Indian Ocean Research Group (IORG) and is an important book for three particular reasons. First, it takes a step forward in identifying key policy themes that can be applied to interstate cooperation around the Indian Ocean Region (IOR). Second, the particular theme discussed is not only central to the economic well-being of Indian Ocean countries, but also to many of the world's most important trading states, and finally the various discussions within the book raise a host of issues to which regional as well as non-regional policy-makers should give serious consideration.

  *Optical Document Security: Measurement,
Characterization and Visualization* Mikael
Lindstrand,2019-04-12 Documents of high value,
such as passports, tickets and banknotes,
facilitate means for authentication.
Authentication processes aim at mitigating
counterfeit "passable products". The arsenal of
"security features" in the business is abundant
but an effective and reliable counterfeit
mitigating system need an architectural approach
rather than either relying on one feature only, or
vaguely motivated aggregated security features.
Optically variable device (OVD) is a concept in
the industry, including costefficient and unique
authentication functionality. OVD based features
may serve as the main counterfeit mitigating
functionality, as in banknotes. For higher value
documents, such as passports, security
architectural design may include multimodal
(combined) features in which OVD is one
characterizing and necessary aspect. Thereby a
successful counterfeit need not only to simulate
("hack") electronic based security features, such
as radio frequency based identifier combined with
public key infrastructure based cryptography (PKI)

but also simulate OVD functionality. Combined
feature authentication, based e.g. on PKI and OVD
that relies on principally different physics and
hence technology competences is of especial
interest. Well-architectured and implemented, such
multimodal counterfeit mitigating systems are
effective to the degree that producing passable
products requiring more resources than potentially
illegitimately gained by the counterfeiter.
Irrespective of level of ambition and efforts
spent on counterfeit mitigation, OVD remains
critically important as a security concept. One
feature of OVD is the possibility to include a
human inspector in the authentication procedure.
Including such "man-in-the-loop" reduces the risk
of successful and unnoticed simulations of
algorithms, such as PKI. One challenge of OVD is a
lack of standards or even measurements
characterizing the significant aspects influencing
a human based inspection. This thesis introduces a
system able to measure, characterize and visualize
the significant aspects influencing a human based
inspection of OVD features. The contribution
includes the development of a multidimensional and
high-dynamic range (HDR) color measurement system
of spatial and angular resolution. The capturing
of HDR images is particularly demanding for
certain high contrast OVD features and require
innovative algorithms to achieve the necessary
high contrast sensitivity function of the imaging
sensor. Representing the significant aspects
influencing a human based inspection of OVD
requires a considerable amount of data. The
development of an appropriate information protocol
is therefore of importance, to facilitate further
analysis, data processing and visualization. The
information protocol transforming the measurement
data into characterizing information is a second
significant achievement of the presented work in
this thesis. To prove the applicability

measurements, visualizations and statistically based analyses have been developed for a selection of previously unsolved problems, as defined by senior scientists and representatives of central banks. Characterization and measurements of the degree to which OVD deteriorate with circulation is one such problem. One particular benefit of the implemented suggested solution is the characterization and measurement aim at aspects influencing human based ("first line") inspection. The principally difference in the problems treated indicates the generality of the system, which is a third significant project achievement. The system developed achieves the accuracy and precision including a resolution, dynamic range and contrast sensitivity function required for a technology independent standard protocol of "optical document security" OVDs. These abilities facilitate the definition and verification of program of requirements for the development of new security documents. Adding also the capability of interlinking first, second and third line inspection based characterizations may prove a particular valuable combination, which is a fourth significant project achievement. The information content (Entropy) of characterized OVDs and OVD production limitations in combination opens for OVD based novel applications of "physically unclonable functions" (PUF). This is of significance as it would generalize the established OVDs to facilitate multimodal verification, including PUF verification. The OVDs would thereby transform into a combined PUF first line inspection facilitating security feature.

   **Handbook of Research on Information Security in Biomedical Signal Processing** Pradhan, Chittaranjan,Das, Himansu,Naik, Bighnaraj,Dey, Nilanjan,2018-04-13 Recent advancements and innovations in medical image and data processing have led to a need for robust and secure

mechanisms to transfer images and signals over the internet and maintain copyright protection. The Handbook of Research on Information Security in Biomedical Signal Processing provides emerging research on security in biomedical data as well as techniques for accurate reading and further processing. While highlighting topics such as image processing, secure access, and watermarking, this publication explores advanced models and algorithms in information security in the modern healthcare system. This publication is a vital resource for academicians, medical professionals, technology developers, researchers, students, and practitioners seeking current research on intelligent techniques in medical data security.

   **Making Public Places Safer** Brandon C. Welsh,David P. Farrington,2009-11-04 The United Kingdom has more than 4.2 million public closed-circuit television (CCTV) cameras-one for every fourteen citizens. Across the United States, hundreds of video surveillance systems are being installed in town centers, public transportation facilities, and schools at a cost exceeding $100 million annually. And now other Western countries have begun to experiment with CCTV to prevent crime in public places. In light of this expansion and the associated public expenditure, as well as pressing concerns about privacy rights, there is an acute need for an evidence-based approach to inform policy and practice. Drawing on the highest-quality research, criminologists Brandon C. Welsh and David P. Farrington assess the effectiveness and social costs of not only CCTV, but also of other important surveillance methods to prevent crime in public space, such as improved street lighting, security guards, place managers, and defensible space. Importantly, the book goes beyond the question of Does it work? and examines the specific conditions and contexts under which these surveillance methods may have an effect on

crime as well as the mechanisms that bring about a reduction in crime. At a time when cities need cost-effective methods to fight crime and the public gradually awakens to the burdens of sacrificing their privacy and civil rights for security, Welsh and Farrington provide this timely and reliable guide to the most effective and non-invasive uses of surveillance to make public places safer from crime.

   21st Century Security and CPTED Randall I. Atlas,2013-06-25 The concept of Crime Prevention Through Environmental Design (CPTED) has undergone dramatic changes over the last several decades since C. Ray Jeffery coined the term in the early 1970s, and Tim Crowe wrote the first CPTED applications book. The second edition of 21st Century Security and CPTED includes the latest theory, knowledge, and practice of CPTED as it relates to the current security threats facing the modern world: theft, violent crime, terrorism, gang activity, and school and workplace violence. This significantly expanded edition includes the latest coverage of proper lighting, building design—both the interior and exterior—physical security barriers, the usage of fencing, bollards, natural surveillance, landscaping, and landscape design. Such design concepts and security elements can be applied to address a wide variety of threats including crime prevention, blast

mitigation, and CBRNE threat protection. Authored
by one of the U.S.'s renowned security experts—and
a premiere architect and criminologist—the book is
the most comprehensive examination of CPTED and
CPTED principles available. This edition includes
a complete update of all chapters in addition to
five new chapters, over 700 figure illustrations
and photos, numerous tables and checklists, and a
