Mobile Wireless Middleware Jean-Marie Bonnin,2009-04-28 The advances in wireless communication technologies and the proliferation of mobile devices have enabled the realization of intelligent environments for people to com- nicate with each other, interact with information-processing devices, and receive a wide range of mobile wireless services through various types of networks and systems everywhere, anytime. This «Internet of Things» will dramatically modify our

lives allowing progress in various domains such as health, security, and ITS (intelligent transportation systems). A key enabler of this pervasive and ubiquitous connectivity environment is the - vancement of software technology in various communication sectors, ranging from communication middleware and operating systems to networking protocols and app- cations. The international conference series on Mobile Wireless Middleware, Oper- ing Systems, and Applications (MOBILWARE) is dedicated to addressing emerging topics and challenges in various mobile wireless software-related areas. The scope of the conference includes the design, implementation, deployment, and evaluation of middleware, operating systems, and applications for computing and communications in mobile wireless systems. MOBILWARE 2009 was the second edition of this conference, which was made possible thanks to the sponsorship of ICST and Create-Net and most importantly the hard work of the TPC and reviewers.

C2 Re-envisioned Marius S. Vassiliou,David S. Alberts,Jonathan Russell Agre,2014-12-08 Command and Control (C2) is the set of organizational and technical attributes and processes by which an enterprise marshals and employs human, physical, and information resources to solve problems and accomplish missions.C2 Re-envisioned: The Future of the Enterprise identifies four interrelated megatrends that are individually and collectively shaping the state of the art and practice of C2 as well as the mission challenges we face. These megatrends the book examines are: Big Problems—manifested in part as increasing complexity of both endeavors and enterprises, as

military establishments form coalitions with each other, and partnerships with various civilian agencies and non-governmental organizations Robustly Networked Environments—enabled by the extremely broad availability of advanced information and communications technologies (ICT) that place unprecedented powers of information creation, processing, and distribution in the hands of almost anyone who wants them—friend and foe alike Ubiquitous Data—the unprecedented volumes of raw and processed information with which human actors and C2 systems must contend Organizational alternatives—as decentralized, net-enabled approaches to C2 have been made more feasible by technology. The book analyzes historical examples and experimental evidence to determine the critical factors that make C2 go wrong and how to get it right. Successful enterprises in the future will be those that can reconfigure their approaches in an agile manner. Offering fresh perspectives on this subject of critical importance, this book provides the understanding you will need to choose your organizational approaches to suit the mission and the conditions at hand.

Modeling and Optimization of Parallel and Distributed Embedded Systems Arslan Munir,Ann Gordon-Ross,Sanjay Ranka,2016-02-08 This book introduces the state-of-the-art in research in parallel and distributed embedded systems, which have been enabled by developments in silicon technology, micro-electro-mechanical systems (MEMS), wireless communications, computer networking, and digital electronics. These systems have diverse applications in domains including military and defense, medical, automotive, and unmanned autonomous vehicles. The emphasis of the book is on the modeling and optimization of emerging parallel and distributed embedded systems in relation to the three key design metrics of performance, power and dependability. Key features: Includes an embedded wireless sensor networks case study to help illustrate the modeling and optimization of distributed embedded systems. Provides an analysis of multi-core/many-core based embedded systems to explain the modeling and optimization of parallel embedded systems. Features an application metrics estimation model; Markov modeling for fault tolerance and analysis; and queueing theoretic modeling for performance evaluation. Discusses optimization approaches for distributed wireless sensor networks; high-performance and energy-efficient techniques at the architecture, middleware and software levels for parallel multicore-based embedded systems; and dynamic optimization methodologies. Highlights research challenges and future research directions. The book is primarily aimed at researchers in embedded systems; however, it will also serve as an invaluable reference to senior undergraduate and graduate students with an interest in embedded systems research.

Light Weight Mobile cloud Computing Environment For Mobile Application. Dr. Ashad ullah Qureshi,2022-06-01 Resource-intensive Mobile Application (RMA) execution is inhibited by mobile de- vice constrained resources, particularly CPU, RAM, storage, and battery. However, Mobile Cloud Computing (MCC) as the state-of-the-art mobile computing paradigm is aiming to augment computing capabilities of mobile devices, mitigate their resource-deficiency, and realize efficient execution of RMA. MCC solutions dominantly perform remote execution of resource-intensive RMAs' components using resources-rich Distant Immobile Cloud (DIC), particularly public cloud. Although DICs feature high availability and elastic scalability, they are characterized by high communication latency and lack of mobility. Therefore, performance gains of mobile augmentation using DIC are mitigated and RMA execution efficiency is remarkably degraded. In this study, we aim to achieve efficient execution of RMAs by proposing a lightweight MCC framework. We verify the problem significance by analyzing time and energy overheads of exploiting DICs for augmenting resource-constraint mobile devices.

Der programmierte Mensch Thomas R Köhler,2012-12-01 Programmieren oder programmiert werden? Hand aufs Herz! Würden Sie einen Tag ohne Online-Zugang aushalten? Ohne dass wir uns dessen bewusst sind, hat sich unser Leben im Zeitalter von Internet und Smartphone bereits nachhaltig geändert. Wir überlassen den Suchmaschinen das Denken und vergessen systematisch Informationen, die man im Internet wiederauffinden kann. Und die nächste Revolution steht bereits in den Startlöchern: Personal Analytics, Quantified Self und Gamification sind zu wesentlichen Schlagworten einer Debatte geworden, deren Reichweite bisher kaum zu überblicken ist. Die fortschreitende Digitalisierung unseres Alltags liefert die Grundlage für die Steuerung von menschlichem Verhalten in einer bisher ungekannten Weise. Thomas R. Köhler zeigt die Zusammenhänge zwischen den neuen Technologien und den Anwendungen für das digitalisierte Ich. Dabei animiert er den Leser zu einem bewussten Umgang mit dem eigenen Selbst im Online-Zeitalter, um mögliche Manipulation und Fremdsteuerung durch Dritte besser erkennen und sich davor schützen zu können. Mit einer verständlichen, spannenden Analyse der Zusammenhänge, Wechselwirkungen und Risiken unserer digitalisierten Lebenswelt und ihrer Anwendungen.
