The book analyzes how the challenges of the Self Driving Car (SDC) exceed the limits of a classical GPS Tracking System (GTS.) It provides a guidebook on setting up a tracking system by customizing its components. It also provides an overview of the prototyping and modeling process, and how the reader can modify this process for his or her own software. Every component is introduced in detail and includes a number of design decisions for development. The book introduces Java EE (JEE) Modules, and shows how they can be combined to a customizable GTS, and used as seed components to enrich existing systems with live tracking. The book also explores how to merge tracking and mapping to guide SDCs, and focuses on client server programming to provide useful information. It also discusses the challenges involved with the live coordination of moving cars. This book is designed to aid GTS developers and engineers in the automotive industry. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you

   Citizens in the 'Smart City' Paolo Cardullo,2020-09-22 This book critically examines 'smart city' discourse in terms of governance initiatives, citizen participation and policies which place emphasis on the 'citizen' as an active recipient and co-producer of technological solutions to urban problems. The current hype

around smart cities and digital technologies has sparked debates in the fields of citizenship, urban studies and planning surrounding the rights and ethics of participation. It also sparked debates around the forms of governance these technologies actively foster. This book presents new socio-technological systems of governance that monitor citizen power, trust-building strategies, and social capital. It calls for new data economics and digital rights for a city founded on normative ideals rather than neoliberal ones. It adopts a normative approach arguing that a 'reloaded' smart city should foster citizenship as a new set of civil and social rights and the 'citizen' as a subject vested with active and meaningful forms of participation and political power. Ultimately, the book questions the utility of the 'smart city' project for radical municipalism, proposing a technological enough but more democratic city, an 'intelligent city' in fact. Offering useful contribution to smart city initiatives for the protection of emerging digital citizenship rights and socially accrued benefits, this book will draw the interest of researchers, policymakers, and professionals in the fields of urban studies, urban planning, urban geography, computing and technology studies, urban politics and urban economics.
