Cinema at the Margins Wheeler Winston Dixon,2013-12-01 More and more, just a few canonical classics, such as Michael Curtiz’s “Casablanca” (1942) or Victor Fleming’s “Gone With The Wind” (1939), are representing the entire film output of an era, to a new generation that knows little of the past, and is encouraged by popular media to live only in the eternal present. What will happen to the rest of the films that enchanted, informed and transported audiences in the 1930s, 1940s, and even as recently as the 1960s? This collection of essays aims to highlight some of the lesser-known treasures of the past – those titles that have been pushed aside by today’s wave of cinema amnesia.

After Digital James A. Anderson, 2017-03-03 Current computer technology doubles in power roughly every two years, an increase called Moore's Law. This constant increase is predicted to come to an end soon. Digital technology will change. Although digital computers dominate today's world, there are alternative ways to compute which might be better and more efficient than digital computation. After Digital looks at where the field of computation began and where it might be headed, and offers predictions about a collaborative future relationship between human cognition and mechanical computation. James A. Anderson, a pioneer of biologically inspired neural nets, presents two different kinds of computation—digital and analog—and gives examples of their history, function, and limitations. A third, the brain, falls somewhere in between these two forms, and is suggested as a computer architecture that is more capable of performing some specific important cognitive tasks—perception, reasoning, and intuition, for example—than a digital computer, even though the digital computer is constructed from far faster and more reliable basic elements. Anderson discusses the essentials of brain hardware, in particular, the cerebral cortex, and how cortical structure can influence the form taken by the computational operations underlying cognition. Topics include association, understanding complex systems through analogy, formation of abstractions, the biology of number and its use in arithmetic and mathematics, and computing across scales of organization. These applications, of great human interest, also form the goals of genuine artificial intelligence. After Digital will appeal to a broad cognitive science community, including computer scientists, philosophers, psychologists, and neuroscientists, as well as the curious science layreader, and will help to understand and shape future developments in computation.

The Origin of Consciousness in the Breakdown of the Bicameral Mind Julian Jaynes, 2000-08-15 National Book Award Finalist: "This man's ideas may be the most influential, not to say controversial, of the second half of the twentieth century."—Columbus Dispatch At the heart of this classic, seminal book is Julian Jaynes's still-controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing. The implications of this revolutionary scientific paradigm extend into virtually every aspect of our psychology, our history and culture, our religion—and indeed our future. "Don't be put off by the academic title of Julian Jaynes's *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Its prose is always lucid and often lyrical...he unfolds his case with the utmost intellectual rigor."—The New York Times "When Julian Jaynes . . . speculates that until late in the twentieth millennium BC men had no consciousness but were automatically obeying the voices of the gods, we are astounded but compelled to follow this remarkable thesis."—John Updike, *The New Yorker* "He is as startling as Freud was in *The Interpretation of Dreams*, and Jaynes is equally as adept at forcing a new view of known human behavior."—*American Journal of Psychiatry*

Extinct Barbara Penner, Adrian Forty, Olivia Horsfall Turner, Miranda Critchley, 2021-11-11 Blending architecture, design, and technology, a visual tour through futures past via the objects we have replaced, left behind, and forgotten. So-called extinct objects are those that were imagined but were never in use, or that existed but are now unused—superseded, unfashionable, or simply forgotten. *Extinct* gathers together an exceptional range of artists, curators, architects, critics, and academics, including Hal

Foster, Barry Bergdoll, Deyan Sudjic, Tacita Dean, Emily Orr, Richard Wentworth, and many more. In eighty-five essays, contributors nominate “extinct” objects and address them in a series of short, vivid, sometimes personal accounts, speaking not only of obsolete technologies, but of other ways of thinking, making, and interacting with the world. *Extinct* is filled with curious, half-remembered objects, each one evoking a future that never came to pass. It is also a visual treat, full of interest and delight.
