Advances in Network-Based Information Systems Leonard Barolli,Natalia Kryvinska,Tomoya

Enokido,Makoto Takizawa,2018-08-27 This book presents the latest research findings and innovative theoretical and practical research methods and development techniques related to the emerging areas of information networking and their applications. Today's networks and information systems are evolving rapidly, and there are several new trends and applications, such as wireless sensor networks, ad hoc networks, peer-to-peer systems, vehicular networks, opportunistic networks, grid and cloud computing, pervasive and ubiquitous computing, multimedia systems, security, multi-agent systems, high-speed networks, and web-based systems. These networks have to deal with the increasing number of users, provide support for different services, guarantee the QoS, and optimize the network resources, and as such there are numerous research issues and challenges that need to be considered and addressed.

Edible Spots and Pots Stacey Hirvela,2014-03-25 It's time for home gardeners to rethink the traditional garden and explore the wide variety of options for growing edibles in anywhere gardens—from decorative pots and raised beds to unusual growing bags, hanging pouches, and tomato rings. These contained gardens are more manageable than long rows or plots and require much less work—yet yield just as much bounty. Featuring dozens of preplanned planting recipes, based on space or container sizes, *Edible Spots and Pots* allows readers to mix and match vegetables, herbs, small fruits, and edible flowers to create a plant-style patchwork based on the thriller (dramatic, focal-point plants), filler (midheight, bushy plants), and spiller (vines and twining plants) formula for creating interesting and botanically sound gardens. Plot-free gardening offers practical solutions for any circumstance a gardener may encounter (challenging spaces, soils, or weather), while also taking into account budget, time, and aesthetic goals. Author Stacey Hirvela shares many other interesting concepts, like One-Minute Veggies (foods that go from patio to plate in

less than a minute) Doubly Delicious Crops that give two flavors from one plant, and space/yield ratios (vegetables worth their footprint). Gardeners will also find an enticing array of 60 edibles that grow well in a defined space for productivity and beauty.

Lessons Learned Alice Sabo, 2018-01-18 While a wildfire threatens High Meadow, an uninvited guest sows seeds of dissent. The president arrives at High Meadow with his entourage of bureaucrats and faux-military. Tillie and Angus don't have time for any distractions as a massive wildfire bears down on their settlement. It will take more than hard work and good intentions to get them through this catastrophe. Martin is leery about sending all of his men to aid those in the path of the fire thereby leaving their borders unprotected. They are most vulnerable in their commitment to help others. Wisp and Nick work the fire lines seeking out people fleeing the raging flames. Only Wisp can find those lost in the heavy smoke, risking his life to bring them to safety. Behind their backs, certain people are questioning every decision. At a time when they most need to work together, the outsiders are creating divisiveness.

Emerging Technologies for Librarians Sharon Q Yang, LiLi Li, 2015-11-28 *Emerging Technologies for Librarians: A Practical Approach to Innovation* focuses on the practical applications of emerging technologies in libraries, defining the technologies in the context of their use in real situations. Each chapter includes an overview of the use of emerging technologies in a particular work area that is followed by a list of relevant applications. Chapters cover work areas such as advertising, distance learning, metadata. and digital libraries, and also focus on applications, including mobile computing and web conferencing, followed by a conclusion. This book serves as a guide for those interested in learning about, and implementing, the available technologies that enhance library services, and also lists and discusses the types of emerging technologies that are available for a specific area of work. Discusses and reviews practical applications of emerging technologies for librarians Explores what emerging technologies are available in particular areas of library services Describes and evaluates applications Connects library work to innovations

Ghost Spin Chris Moriarty, 2013-05-28 Sometimes a ghost of a chance is all you get. Award-

winning author Chris Moriarty returns to a dazzling cyber-noir far future in this gritty, high-stakes thriller where the only rule is “Evolve . . . or die.” The Age of Man is ending. The UN’s sprawling interstellar empire is failing as its quantum teleportation network collapses, turning once-viable colonies into doomed island outposts. Humanity’s only hope of survival is the Drift: a mysterious region of space where faster-than-light travel—or something far stranger—seems possible. As mercenaries and pirates flock to the Drift, the cold war between the human-led UN and the clone-dominated Syndicates heats up. Whoever controls the Drift will chart the future course of human evolution—and no one wants to be left behind in a universe where the price of failure is extinction. When the AI called Cohen ventures into the Drift, he dies—allegedly by his own hand—and his consciousness is scattered across the cosmos. Some of his ghosts are still self-aware. Some are insane. And one of them hides a secret worth killing for. Enter Major Catherine Li, Cohen’s human (well, partly human) lover, who embarks on a desperate search to solve the mystery of Cohen’s death—and put him back together. But Li isn’t the only one interested in Cohen’s ghosts. Astrid Avery, a by-the-book UN navy captain, is on the hunt. So

is William Llewellyn, a pirate who has one of the ghosts in his head, which is slowly eating him alive. Even the ghosts have their own agendas. And lurking behind them all is a pitiless enemy who will stop at nothing to make sure the dead don't walk again. Praise for Ghost Spin "Complexity is the watchword here, of thought, idea, narrative, character and plot. . . . Highly rewarding."—Kirkus Reviews "Rewarding . . . The adaptations humans make to survive in the hostile environments of other worlds, a galaxy teetering on the edge of singularity . . . are genuinely visionary."—Publishers Weekly "This stand-alone 'spin-off' offers a compelling tale of adventure/suspense blended with cybernoir and high-tech sf."—Library Journal "An excellent read: gripping, fast-paced, provocative and handsome."—Tordotcom "A brilliant mix of space opera, cyberpunk, and just plain great writing, Moriarty's work is some of the most impressive in science fiction today."—SFRevu

Better Homes and Gardens ,1955

Desperate Measures Alice Sabo,2018-12-04 The stability of the Survivor's Alliance is still fragile. They made it through the winter, but now it's flu season. Every year the virus changes just a little.

Tillie and Angus are trying to prepare for every scenario, even the possibility that they will be the first to go. Nick is working to bridge the gap in supplies until the spring crops come in. Wisp and Bridget are preparing for the birth of their child. But there are changes coming that no one expected.

Fungal Pathogenicity and the Plant's Response R.J.W. Byrde, 2012-12-02 Fungal Pathogenicity and the Plants Response covers the proceedings of the Third Long Ashton Symposium held at Long Ashton Research Station University of Bristol on September 22-24, 1971. Topics for this biennial symposium are decided for their importance to Agriculture and Horticulture and for the timeliness of a critical review of developments in fungal pathogenicity and plants response. Composed of five sections, this book discusses the direct involvement of fungal proteins in fungal pathogenicity, the role of extracellular enzymes in fruit rotting, and the control of vertical distribution of apple scab disease. It then examines the role of ethylene in plant diseases, growth of obligate parasites, and the concepts of host-pathogen relations. It also focuses on plants induced and preformed resistance factors, including phaseollin, phytoalexin, and benzoic acid. The concluding section discusses the significant role of

enzymes, particularly lysosomal enzymes, in fungal pathogenicity. With a strong focus on original data and speculative comment on host-parasite contact, this book will be helpful for research workers, teachers, and students who wish to broaden their knowledge in fungal pathogenicity.

The Ghost of Madame Curie James Piazza,2022-06-29 James Piazza is a Western New York-based archivist and music historian. He developed a series of multimedia presentations on experimental music, ambient sound, archival techniques for digital audio, and lectures on personal media servers for large file libraries. His primary goal is to create a greater public understanding and awareness of 20th century music and sound. Piazza founded Innerspace Labs as an independent music archive chiefly communicating with the public via The Innerspace Connection music blog. He manages a library of over 300,000 soundworks focusing on ambient and experimental recordings. This book comprises the first 12 years of our publications showcasing highlights of the Archive, as well as select previously unpublished works.

Play and Win Mah-jong: Teach Yourself David Pritchard,2013-11-29 This is an essential handbook

for anyone new to the game of Mah-jong. It takes you from the very beginning - learning the rules, choosing a set (or playing online) to advanced advice on strategy and gamesmanship. Each stage of play is clearly explained with diagrams and instructions and with plenty of practical examples to help you learn. Full coverage of the basics of scoring, settlements and penalties will help you become a true master of the game.

Palfrey Versus The League of Light John Creasey,2015-09-20 A Darwin explorer, Keith Young, believes he has found radioactivity in a mysterious 'forbidden city', inside an aboriginal reserve. The rock formations are shaped like battlements, towers, walls and streets. At night the city glowed with an eerie light, which he considers to be radioactive in origin.

American School and University ,1958

Spin State Chris Moriarty,2004-11-23 From a stunning new voice in hard science fiction comes the

thrilling story of one woman's quest to wrest truth from chaos, love from violence, and reality from illusion in a post-human universe of emergent AIs, genetic constructs, and illegal wetware. . . . UN Peacekeeper Major Catherine Li has made thirty-seven faster-than-light jumps in her lifetime—and has probably forgotten more than most people remember. But that's what backup hard drives are for. And Li should know; she's been hacking her memory for fifteen years in order to pass as human. But no memory upgrade can prepare Li for what she finds on Compson's World: a mining colony she once called home and to which she is sent after a botched raid puts her on the bad side of the powers that be. A dead physicist who just happens to be her cloned twin. A missing dataset that could change the interstellar balance of power and turn a cold war hot. And a mining "accident" that is starting to look more and more like murder. . . . Suddenly Li is chasing a killer in an alien world miles underground where everyone has a secret. And one wrong turn in streamspace, one misstep in the dark alleys of blackmarket tech and interstellar espionage, one risky hookup with an AI could literally blow her mind.
