Writing in the Shadow Harry Stone,2014-01-14 The first complete national and international survey in the English language of the clandestine newspapers and books published in the occupied countries of Europe during the Second World War. A man with earphones crouching in the attic listening in with a crystal set, a prisoner writing fearfully even in the condemned cell, youths taking courses in weightlifting so as to be able to carry cases of lead type with apparent ease: these are just some of the people who helped produce clandestine newspapers and books in the occupied countries of Europe during the Second World War. Writing in the Shadow describes the risks these people ran and the ingenuity and brilliant improvisation they used to hoodwink the Nazis and distribute newsletters to tens of thousands of people.
Artificial Intelligence Applications for Sustainable Construction Moncef L. Nehdi,Harish Chandra Arora,Krishna Kumar,Robertas Damaševičius,Aman Kumar,2024-02-13 Artificial Intelligence Applications for Sustainable Construction presents the latest developments in AI and ML technologies applied to real-world civil engineering concerns. With an increasing amount of attention on the environmental impact of every industry, more construction projects are going to require sustainable construction practices. This volume offers research evidence, simulation results, and case studies to support this change. Sustainable construction, in fact, not only uses renewable and

recyclable materials when building new structures or repairing deteriorating ones, but also adopts all possible methods to reduce energy consumption and waste. The concisely written but comprehensive, practical knowledge put forward by this international group of highly specialized editors and contributors will prove to be beneficial to engineering students and professionals alike. Global Mega-Science David P. Baker,Justin J.W. Powell,2024-04-23 Never has the world been as rich in scientific knowledge as it is today. But what are its main sources? In accessible and engaging fashion, *Global Mega-Science* examines the origins of this unprecedented growth of knowledge production over the past hundred and twenty years. David P. Baker and Justin J.W. Powell integrate sociological and historical approaches with unique scientometric data to argue that at the heart of this phenomenon is the unparalleled cultural success of universities and their connection to science: the university-science model. Considering why science is so deeply linked to (higher) educational development, the authors analyze the accumulation of capacity to produce research—and demonstrate how the university facilitates the emerging knowledge society. The age of global mega-science was built on the symbiotic relationship between higher education and science, especially the worldwide research collaborations among networked university-based scientists. These relationships are key for scholars and citizens to understand the past, future, and sustainability of science.
