Location Systems Anthony LaMarca, Eyal de Lara, 2022-06-01 Advances in electronic location technology and the coming of age of mobile computing have opened the door for location-aware applications to permeate all aspects of everyday life. Location is at the core of a large number of high-value applications ranging from the life-and-death context of emergency response to serendipitous social meet-ups. For example, the market for GPS products and services alone is expected to grow to US\$200 billion by 2015. Unfortunately, there is no single location technology that is good for every situation and exhibits high accuracy, low cost, and universal coverage. In fact, high accuracy and good coverage seldom coexist, and when they do, it comes at an extreme cost. Instead, the modern localization landscape is a kaleidoscope of location systems based on a multitude of different technologies including satellite, mobile telephony, 802.11, ultrasound, and infrared among others. This lecture introduces researchers and developers to the most popular technologies and systems for location estimation and the challenges and opportunities that accompany their use. For each technology, we discuss the history of its development, the various systems that are based on it, and their trade-offs and their effects on cost and performance. We also describe technology-independent algorithms that are commonly used to smooth streams of location estimates and improve the accuracy of object tracking. Finally, we provide an overview of the wide variety of application domains where location plays a key role, and discuss opportunities and new technologies on the horizon. Table of Contents: Introduction / The Global Positioning System / Infrared and Ultrasonic Systems / Location Estimation with 802.11 / Cellular-Based Systems / Other Approaches / Improving Localization Accuracy / Location-Based Applications and Services / Challenges and Opportunities / References

Mobile Influence Chuck Martin, 2013-06-11 The explosion of mobile access across the globe has shaken the foundations of the traditional sales funnel, and businesses are scrambling to adapt and find new ways to tap into the market. For all their effort, many have failed to realize that the issue is not how to reach the customer

where they are, but where they are going and their mindset at the moment. With the staggering growth in the use of mobile technology as both product research and purchase point, businesses have yet to fully understand the important role mobile devices play in the basic structure of the traditional shopping model and the new importance on linking behavior with location. With the death of the traditional sales funnel comes author Chuck Martin's new model, the Mobile Shopping Life Cycle. Based on the author's in-depth research, Martin has identified the six specific moments in the timeline of the sale which marketers must target effectively in order to reach the mobile buyer. From location-based marketing to mobile payment systems, Martin's model gives marketers access to the tools necessary to build a new sales framework that properly addresses the future of the market.

The Semantic Web - ISWC 2003 Katia Sycara, John Mylopoulos, 2003-10-02 These proceedings contain the papers accepted for presentation at the Second International Semantic Web Conference (ISWC 2003) held on Sanibel Island, Florida, U. S. A. , October 20–23, 2003. Following the success of ISWC 2002 that washeldinSardinia in June 2002, ISWC 2003 enjoyed a greatly increased interest in the conference themes. The number of submitted papers more than doubled compared with ISWC 2002 to 283. Of those, 262 were submitted to the research track and 21 to the industrial track. With rare exceptions, each submission was evaluated by three program committee members whose reviews were coordinated by members of the senior program committee. This year 49 papers in the research track and 9 papers in the industrial track were accepted. The high quality of ISWC 2003 was the result of the joint effort of many people. First of all we would like to thank the authors for their high-quality submissions and the members of the program committee for their reviewing and review coordination efforts. We would

like to extend special thanks to Christoph Bussler for chairing the industrial track, to Mike Dean for his help with the conference management software, the web site, and conference publicity, and to Massimo Paolucci for helping with the organization of the proceedings and arranging sponsorships.
