Lockheed C-141 Starlifter- Warbirdtech Frederick a. Johnsen, 2005-06 The photos in this edition are black and white. During World War II, the need for military transports prompted the modification of bombers with varying degrees of success, yet ships remained the means for moving armies overseas. As the Cold War verged into the early 1960s, some American military planners realized the need for rapid deployment of military assets to trouble spots around the world, since not all threats could be countered with a nuclear deterrent. Airlift would be a key, but old reliable transports like the piston-engine C-124 Globemaster II were too slow for the task. Using generally proven components, Lockheed's swept-wing C-141 confirmed for the U.S. Air Force the promise of a global airlift. With the Starlifter, cargo and troops could be airlifted intercontinentally at three-quarters the speed of sound. From the 1960s to the 21st century, C-141s have been a trusted transporter of everything from troops and helicopters to returned hostages and presidential limousines. Lockheed C-141 Starlifter includes an account of the circumstances that led to the C-141, its design and structural details, flight characteristics, and development from C-141A to C-141B, and finally to C-141C.

C-141 Starlifter John Gourley, 2021-06-28 The Lockheed C-141 Starlifter was a new-build design by Lockheed and proved adaptable to many roles, from carrying outsized cargo to dropping paratroops. The C-141 was used in regions as extreme as the heat and humidity of Vietnam, the deserts of the Middle East, and the frozen ice pack of Antarctica. Modification programs enabled the C-141 to make full use of its capabilities, by adding in-flight refueling plus extending the length of the fuselage. The plane was a valued and appreciated USAF asset in numerous missions, from disaster aid and humanitarian relief to doing their part in Operation Desert Shield/Storm, and in the war on terror. The aircraft were eventually retired enmasse simply as a result of wear and tear in 2006. This book covers in detail all aspects such as interior/exterior configurations, cargo capabilities, missions, and modifications made throughout its service life.

Lockheed C-141 Starlifter Bob Archer, 2022-09 The C-141 Starlifter, quite simply, looked right and was right. During the second half of the 1960s, it became a worldwide visitor, and it was in service for more than 40 years before the final examples were retired. With over 170 images and detailed information, this book looks at the aircraft itself, as well as the organizations that flew it.

The C-5 Galaxy History Roger Launius, B.J. Dvorscak, 2001-01-01 The C-5 Galaxy is truly an effective military aircraft. It remains an essential, successful component of the U.S. military airlift capability. This book reveals the events that led to the C-5 requirement; and the controversies of its early operational existence. Details of testing, flight characteristics, operational accomplishments and world flight records are presented. Interviews from senior Lockheed management and experienced flight crews validate the C-5's decisive accomplishments.

Lockheed C-5 Galaxy Chris Reed, 2000 Still the largest U.S. military aircraft more than three decades after its first flight, the Lockheed C-5 Galaxy remains an integral part of Air Mobility Command into the 21st century. Lockheed C-5 Galaxy chronicles the development and service career of this behemoth of the airways, starting with the early 1960s requirement for a larger airlifter to supplement the C-141A, through Galaxy's troubled early history to the types service during the Nickel Grass, Desert Shield, and other airlift operations. Several Galaxy counterparts, such as the Antonov An-124, are also depicted. Over 140 photographs, nearly all in color and many never before published, show the C-5 and other airlifters in a variety of paint schemes, while detail shots will be of use to the scale modeler.

The Lockheed Plant Joe Kirby, 2011 The Lockheed Plant in Marietta has been building many of the world's most legendary aircraft for the past 60 years--and that doesn't even count its service building B-29 bombers for the Bell Aircraft Company during World War II. Lockheed's six decades have seen the plant build jet bombers, like the B-47 Stratojet; the world's most dominant fighter jet (the F-22 Raptor); and the most vaunted cargo planes (C-130 Hercules, C-141 StarLifter, and C-5 Galaxy). In *Images of America: The Lockheed Plant*, readers will learn about those planes, the people who designed and assembled them, and the plant in which they were built. The striking images in this book were shared by Lockheed Martin and the Marietta Daily Journal and depict the plant from its construction through today.

A Concise History of the U.S. Air Force Stephen Lee McFarland, 1997 Except in a few instances, since World War II no American soldier or sailor has been attacked by enemy air power. Conversely, no enemy soldier or sailor has acted in combat without being attacked or at least threatened by American air power. Aviators have brought the air weapon to bear against enemies while denying them the same prerogative. This is the legacy of the U.S. Air Force, purchased at great cost in both human and material resources. More often than not, aerial pioneers had to fight technological ignorance, bureaucratic opposition, public apathy, and disagreement over purpose. Every step in the evolution of air power led into new and untrodden territory, driven by humanitarian impulses; by the search for higher, faster, and farther flight; or by the conviction that the air way was the best way. Warriors have always coveted the high ground. If technology permitted them to reach it, men, women and an air force held and exploited it--from Thomas Selfridge, first among so many who gave that last full measure of devotion; to Women's Airforce Service Pilot Ann Baumgartner, who broke social barriers to become the first American woman to pilot a jet; to Benjamin Davis, who broke racial barriers to become the first African American to command a flying group; to Chuck Yeager, a one-time non-commissioned flight officer who was the first to exceed the speed of sound; to John Levitt, who earned the Medal of Honor by throwing himself over a live flare to save his gunship crew; to John Warden, who began a revolution in air power thought and strategy that was put to spectacular use in the Gulf War. Industrialization has brought total war and air power has brought the means to overfly an enemy's defenses and attack its sources of power directly. Americans have perceived air power from the start as a more efficient means of waging war and as a symbol of the nation's commitment to technology to master challenges, minimize casualties, and defeat adversaries.

American Military Transport Aircraft Since 1925 E.R. Johnson, 2013-04-23 Without the support of airlift, the modern American military machine would be brought to a standstill. Since World War II--beginning with the Cold War and continuing up to the present day--the U.S. armed forces have come increasingly to rely upon airlift for mobility. The power to rapidly move and thereafter support a military operation--anywhere in the world, at any time--has become a foundational element of American defense policy. This work provides the reader with a comprehensive historical survey--including technical specifications, drawings, and photographs--of each type of fixed-wing aircraft used by U.S. military forces over a nearly 90-year period to carry out the airlift mission.

Lockheed Martin Color Florian Ion Petrescu, Rely Victoria Petrescu, 2013-02 Lockheed Martin (NYSE: LMT) is an American global aerospace, defense, security, and advanced technology company with worldwide interests. It was formed by the merger of Lockheed Corporation with Martin Marietta in March 1995. It is headquartered in Bethesda, Maryland, in the Washington Metropolitan Area. Lockheed Martin employs 123,000 people worldwide. Robert J. Stevens is the current Chairman and Chief Executive Officer. Lockheed Martin is one of the world's largest defense contractors;

In 2009, 74% of Lockheed Martin's revenues came from military sales. It received 7.1% of the funds paid out by the Pentagon. Lockheed Martin operates in four business segments. These comprise, with respective percentages of 2009 total net sales of \$45.2 billion, Aeronautics (27%), Electronic Systems (27%), Information Systems & Global Solutions (27%), and Space Systems (19%). In 2009 US Government contracts accounted for \$38.4 billion (85%), foreign government contracts \$5.8 billion (13%), and commercial and other contracts for \$900 million (2%). In both 2009 and 2008 the company topped the list of US Federal Contractors. The company has received the Collier Trophy six times. Most recently (in 2001) for being part of developing the X-35/F-35B LiftFan Propulsion System, and again in 2006 for leading the team that developed the F-22 Raptor fighter jet. Lockheed Martin is currently developing the F-35 Lightning II. Merger talks between Lockheed Corporation and Martin Marietta began in March 1994, with the companies announcing their \$10 billion planned merger on August 30, 1994. The deal was finalized on March 15, 1995 when the two companies' shareholders approved the merger. The segments of the two companies not retained by the new company formed the basis for the present L-3 Communications, a mid-size defense contractor in its own right. Lockheed Martin later spun off the materials company Martin Marietta Materials. Both companies contributed important products to the new portfolio.

Miracle in Hueva in 1973: a Jet Crashed That Changed the Pilot's Life Forever Dirk Tlamka, 2021-08-29 The Lockheed C-141 Starlifter is a military strategic airlifter that served with the Military Air Transport Service (MATS), its successor organization the Military Airlift Command (MAC), and finally the Air Mobility Command (AMC) of the United States Air Force (USAF). The aircraft also served with airlift and air mobility wings of the Air Force Reserve (AFRES), later renamed Air Force Reserve Command (AFRC), the Air National Guard (ANG), and, later, one air mobility wing of the Air Education and Training Command (AETC) dedicated to C-141, C-5, C-17, and KC-135 training. In the town of Hueva, Guadalajara province, few forget the date of August 28, 1973, where a US C-141 Starlifter military transport aircraft crashed with 25 people on board. Only one member of the crew survived, thanks to the efforts of two of Hueva's exemplary citizens. Many unknowns were surrounding this air crash. Now, 43 years later, all the facts of this tragic event are revealed, with the story of that horrible accident and the testimony of its protagonists.

F-111 Bob Archer, 2022-05-19 When introduced, the F-111 was a revolutionary aircraft and extremely popular. Capable of delivering a wide variety of ordnance, it was arguably one of the best tactical aircraft of its time. With 180 photos, this book covers the operational period of the F-111 Aardvark and EF-111 Raven from the 1960s through to eventual retirement in the 1990s.

Military Airlift and Aircraft Procurement Office of Air Force History, U.S. Air Force, 2015-03-03 This is the third in a series of research studies—historical works that were not published for various reasons. Yet, the material contained therein was deemed to be of enduring value to Air Force members and scholars. These were minimally edited and printed in a limited edition to reach a small audience that may find them useful. We invite readers to provide feedback to the Air Force History and Museums Program. The author, Marcelle S. Knaack, a member of the Office of Air Force History, undertook the research and writing of this book as a consultant, after she retired. Tragically, she passed away in November 1996, before she completed the manuscript. Her colleague, Bernard C. Nalty, also retired by that time, undertook to complete Ms. Knaack's work. At first glance, the history of the C-5A Galaxy seems to be nothing more than a compilation of contradictions. Ordered under a totally new procurement concept specifically designed to control costs, the C-5A aircraft ended up costing a small fortune. Its purchase in 1965 depended on achieving an initial operational capability no later than 1969, but the transport did not appear in South Vietnam in a truly operational capacity until August 1971. Although built by the Lockheed-Georgia Company, celebrated for its success with military transports like the C-130 Hercules and C-141 Starlifter, the C-5A program from the very start encountered serious technical problems, delays, and exorbitant cost overruns, which combined to trigger

several congressional investigations. Although the program contracted in size under the pressure of these failings, it survived congressional opposition and began to demonstrate its unique value during the last year of the Vietnam War, even though operating under weight restrictions. In October 1973, moreover, the C-5A helped provide Israel with a constant flow of supplies to ensure victory over the attacking Egyptian and Syrian armies. Into the 1980s the C-5A operated under increasingly stringent flying restrictions because the flawed wing structure deteriorated until it had to be replaced. While under these restrictions, the C-5A could carry just 174,000 pounds of cargo, roughly 100,000 pounds more than the C-141, but 46,000 pounds less than the Galaxy's design objective. Although installation of the heavier new wing would probably prevent the airplane from ever attaining the design capacity of 220,000 pounds, the Military Airlift Command was determined to extend the service life of the C-5A because its performance remained so impressive even with a reduced load. The improvements that strengthened the structure of the C-5A were incorporated in a new version of the Galaxy, the C-5B, for which Lockheed-Georgia reopened its production line. The modified A-model and the new C-5B did everything expected of a heavy-logistics transport during the Persian Gulf War of 1990-1991.
