Tomorrowing Terry Bisson,2024-04-12 For twenty years, Terry Bisson published a regular “This Month in History” column in the science fiction magazine Locus. Tomorrowing collects these two decades of memorable events---four per month---each set in a totally different imaginary yet possible, inevitable yet avoidable future. From the first AI president to the first dog on Mars to the funeral of Earth’s last glacier, these stories are speculative SF at its most (and least) serious. Collected as a series for the first time, Tomorrowing will amuse, alarm, intrigue, entertain, and like all good science fiction, make readers think. Bisson’s short stories have won every major award in science fiction, including the Hugo and the Nebula, but never, ever anything for this series.

The Loving Dead Amelia Beamer,2010-07-01 Kate and Michael are roommates living in the Oakland hills, working at the same Trader Joes supermarket. A night of drunken revelry changes their lives forever, but not in the way that anyone would expect. A slow-spreading plague of zombie-ism breaks out at their house party, spreading amongst their circle of friends, and simultaneously through the Bay Area. This zombie plague — an STD of sorts — is spread through sex and kissing, turning its victims into mindless, horny, voracious killers. Thrust into extremes by this slow- motion tragedy, Kate

and Michael are forced to confront the choices they've made in their lives, and their fears of commitment, while trying to stay alive and reunite in the one place in the Bay Area that's likely to be safe and secure from the zombie hordes: Alcatraz.

Current Topics In Bone Biology Hong-wen Deng, Yao-zhong Liu, Chun-yuan Guo, Di Chen, 2005-05-09 This book covers a wide spectrum of areas related to basic bone research. While bone remodeling, bone development, and osteoclast biology constitute the main contents, topics

important to the understanding of bone metabolism and treatment of bone-related diseases are also intensively reviewed. Three chapters are dedicated to the classic topic of bone mechanics, which include a brief overview of the mechanostat hypothesis, a more detailed review on mechanotransduction and bone adaptation, and a chapter illustrating the basic principles of bone mechanical testing. New emerging fields such as skeletal stem cells, bone tissue engineering, phytoestrogens applications, and bone genetics study using mouse models, are also covered in detail. The book closes with a special chapter dedicated to state-of-the-art advances in bone biology research.

Psychos John Skipp, 2012-09-25 This collection of thirty-eight terrifying tales of serial killers at large, written by the great masters of the genre, plumbs the horrifying depths of a deranged mind and the forces of evil that compel a human being to murder, gruesomely and methodically, over and over again. From Hannibal Lecter (The Silence of the Lambs) to Patrick Bateman (American Psycho), stories of serial killers and psychos loom large and menacing in our collective psyche. Tales of their grisly conquests have kept us cowering under the covers, but still turning the pages. Psychos is the first book to collect in a single volume the scariest and most well-crafted fictional works about these deranged killers. Some of the stories are classics, the best that the genre has to offer, by renowned writers such as Neil Gaiman, Amelia Beamer, Robert Bloch, and Thomas Harris. Other selections are from the latest and most promising crop of new authors. John Skipp, who is also the editor of

Zombies, Demons and Werewolves and Shapeshifters, provides fascinating insight, through two nonfiction essays, into our insatiable obsession with serial killers and how these madmen are portrayed in popular culture. Resources at the end of the book includes lists of the genre's best long-form fiction, movies, websites, and writers.

The Best Horror of the Year Ellen Datlow, 2010-03-01 Celebrities take refuge in a white-walled mansion as plague and fever sweep into Cannes; a killer finds that the living dead have no appetite for him; a television presenter stumbles upon the chilling connection between a forgotten animal act and the Whitechapel Murders; a nude man unexpectedly appears in the backgrounds of film after film; mysterious lights menace the crew of a small plane; a little girl awakens to discover her nightlight--and more--missing; two sisters hunt vampire dogs in the wild hills of Fiji; lovers get more than they bargained for in a decadent discotheque; a college professor holds a classroom mesmerized as he vivisects Poe's *The Masque of the Red Death*... What frightens us, what unnerves us? What causes that delicious shiver of fear to travel the lengths of our spines? It seems the answer changes every year. Every year the bar is raised; the screw is tightened. Ellen Datlow knows what scares us; the seventeen stories included in this anthology were chosen from magazines, webzines, anthologies, literary journals, and single author collections to represent the best horror of the year. Legendary editor Ellen Datlow (*Poe: New Tales Inspired by Edgar Allan Poe*), winner of multiple Hugo, Bram Stoker, and World Fantasy awards, joins Night Shade Books in presenting *The Best Horror of the Year, Volume Two*.

The Mouse in Biomedical Research Henry L. Foster, J. David Small, James G. Fox, 2014-05-10 The Mouse in Biomedical Research, Volume III: Normative Biology, Immunology, and Husbandry focuses on the normative biology, immunology, and husbandry of laboratory mice. Topics covered range from gnotobiotics and gastrointestinal microflora to animal health surveillance and health delivery systems, along with environmental monitoring. The management and design of breeding and research facilities are also discussed. Comprised of 18 chapters, this volume begins with an overview of studies involving gnotobiotic mice, the induction of gnotobiosis, and microbiological testing of gnotobiotic animals. Maintenance of breeding colonies of gnotobiotic animals is also considered, together with the shipment of gnotobiotics and laboratory facilities for using gnotobiotics. The reader is then introduced to management and design of breeding and research facilities for gnotobiotic mice; practical factors associated with providing adequate nutrition for laboratory mice; and environmental and equipment

monitoring. Subsequent chapters deal with the basic biology of the mouse, including anatomy, embryology, reproductive physiology, physiology, endocrinology, hematology, clinical biochemistry, and gastrointestinal microflora. The book also examines immunoglobulins and immunoglobulin genes; lymphocyte immunogenetics; immune response disorders; and biotechnology and surgical techniques. This monograph will be useful to biologists, immunologists, researchers, and others those who use mice in the laboratory or are concerned with the production and maintenance of colonies of mice.

Current Topics in Human Genetics Hong-wen Deng, 2007 Analogies play a fundamental role in science. To understand how and why, at a given moment, a certain analogy was used, one has to know the specific, historical circumstances under which the new idea was developed. This historical background is never presented in scientific articles and quite rarely in books. For the general reader, the undergraduate or graduate student who learns the subject for the first time, but also for the practitioner who looks for inspiration or who wants to understand what his colleague working in another field does, these historical circumstances can be fascinating and useful. This book discusses a series of analogy effects in subatomic physics, the prediction and theory of which the author has contributed to in the last 50 years. These phenomena are presented at a level accessible to the non-specialist, without formulae but with emphasis on the personal and historical background: memoirs of meetings, discussions and correspondence with collaborators and colleagues. As such, besides its scientific aspects, the book constitutes an absorbing witness account of a holocaust survivor who subsequently illegally crossed the Iron Curtain to escape communist persecution.

Nutritional Aspects of Bone Health Susan A Lanham-New, Jean-Phillippe Bonjour, 2007-10-31 Nutritional Aspects of Bone Health provides an in-depth review of the role of diet in the development

and maintenance of bone health throughout the lifecycle, and prevention of osteoporosis in later life. The book is multi-authored by the world's leading researchers in this area, who have come together to formulate the first ever textbook on nutritional aspects of bone health, and includes the current and cutting edge science underpinning the prevention of bone disease. The book is structured such that, in the first section, an overview is provided on what is meant by the terms bone health and osteoporosis and includes key areas such as epidemiology, genetics and the impact of non-nutritional exogenous factors influencing the skeleton. The second section details the established nutritional factors affecting bone health, namely calcium and vitamin D. Section three focuses on the role of macronutrients and macrominerals in bone health, namely protein, phosphorus, sodium and potassium, including the criticality of acid-base homeostasis to skeletal integrity. Section four addresses the effects of microminerals, trace elements, vitamin K, vitamin A and isoflavones on bone. Section five focuses attention on key issues connected with the influence of diet and anorexia and bulimia on bone health including nutrition and bone growth; nutrient: gene interactions; nutrient: drug interactions; and the final section discusses the effect of diet on reduction of fracture risk; the cost-effectiveness of nutritional supplements; and nutritional strategies for prevention and treatment of osteoporosis. The book is targeted at a number of key audiences. Whilst there is a focus on the academic research world and those principally involved in education, at both undergraduate and postgraduate levels, the book will also be of considerable interest to those participating in the treatment and prevention of osteoporosis, namely those working in the medical and health promotion fields. Furthermore, Nutritional Aspects of Bone Health will be of particular interest to the food industry as the popularity of foods designed to target specific health issues increases, and nutritional therapy has a critical role to play in this major public health problem.
