*Engineering Design Synthesis* Amaresh Chakrabarti, 2002-02-20

This book brings together some of the most influential pieces of research undertaken around the world in design synthesis. It is the first comprehensive work of this kind and covers all three aspects of research in design synthesis: - understanding what constitutes and influences synthesis; - the major approaches to synthesis; - the diverse range of tools that are created to support this crucial design task. With its range of tools and methods covered, it is an ideal introduction to design synthesis for those intending to research in this area as well as being a valuable source of ideas for educators and practitioners of engineering design.

**The Applications of New Multi-Locus GWAS Methodologies in the Genetic Dissection of Complex Traits** Yuan-Ming Zhang, Zhenyu Jia, Jim M Dunwell, 2019-06-19

Genome-Wide Association Studies (GWAS) are widely used in the genetic dissection of complex traits. Most existing methods are based on single-marker association in genome-wide scans with population structure and polygenic background controls. To control the false positive rate, the Bonferroni correction for multiple tests is frequently adopted. This stringent correction results in the exclusion of important loci, especially for GWAS in crop genetics. To address this issue, multi-locus GWAS methodologies have been recommended, i.e., FASTmrEMMA, ISIS EM-BLASSO, mrMLM, FASTmrMLM, pLARM EB, pKWmEB and FarmCPU. In this Research Topic, our purpose is to clarify some important issues in the application of multi-locus GWAS methods. Here we discuss the following subjects: First, we discuss the advantages of new multi-locus GWAS methods over the widely-used

single-locus GWAS methods in the genetic dissection of complex traits, metabolites and gene expression levels. Secondly, large experiment error in the field measurement of phenotypic values for complex traits in crop genetics results in relatively large P-values in GWAS, indicating the existence of small number of significantly associated SNPs. To solve this issue, a less stringent P-value critical value is often adopted, i.e., 0.001, 0.0001 and  $1/m$  ( $m$  is the number of markers). Although lowering the stringency with which an association is made could identify more hits, confidence in these hits would significantly drop. In this Research Topic we propose a new threshold of significant QTN (LOD=3.0 or P-value= $2.0e-4$ ) in multi-locus GWAS to balance high power and low false positive rate. Thirdly, heritability missing in GWAS is a common phenomenon, and a series of scientists have explained the reasons why the heritability is missing. In this Research Topic, we also add one additional reason and propose the joint use of several GWAS methodologies to capture more QTNs. Thus, overall estimated heritability would be increased. Finally, we discuss how to select and use these multi-locus GWAS methods.

### **Birational Geometry, Kähler–Einstein Metrics and Degenerations**

Ivan Cheltsov, Xiuxiong Chen, Ludmil Katzarkov, Jihun Park, 2023-05-23 This book collects the proceedings of a series of conferences dedicated to birational geometry of Fano varieties held in Moscow, Shanghai and Pohang. The conferences were focused on the following two related problems: • existence of Kähler–Einstein metrics on Fano varieties • degenerations of Fano varieties on which two famous conjectures were recently proved. The first is the famous Borisov–Alexeev–Borisov Conjecture on the boundedness of Fano varieties, proved by Caucher Birkar (for which he was awarded the Fields medal in 2018), and the second one is the (arguably even more famous) Tian–Yau–Donaldson Conjecture on the existence of Kähler–Einstein metrics on (smooth) Fano varieties and K-stability, which was proved by Xiuxiong Chen, Sir Simon Donaldson and Song Sun. The solutions for these longstanding conjectures have opened new directions in birational and Kähler geometries. These research directions generated new interesting mathematical problems, attracting the attention of mathematicians worldwide. These conferences brought together top researchers in both fields (birational geometry and complex geometry) to solve some of these problems and

understand the relations between them. The result of this activity is collected in this book, which contains contributions by sixty nine mathematicians, who contributed forty three research and survey papers to this volume. Many of them were participants of the Moscow–Shanghai–Pohang conferences, while the others helped to expand the research breadth of the volume—the diversity of their contributions reflects the vitality of modern Algebraic Geometry.

**Jonathan Edwards's Turn from the Classic-Reformed Tradition of Freedom of the Will** Philip John Fisk,2016-07-11 Philip J. Fisk offers a critical reappraisal of Jonathan Edwards's Freedom of Will, interpreting Edwards from within his own tradition, Reformed Orthodoxy ( $\pm$ 1550-1750), avoiding the outdated paradigms of the conventional interpretation of Edwards and his tradition, a so-called deterministic, reconciliationist Calvinism, and demonstrating from primary sources, such as Harvard and Yale commencement theses and quæstiones, that Edwards departed ways with Reformed Orthodoxy's robust and highly nuanced view of freedom of will, contingency, and necessity.

**Locus Solus** Raymond Roussel,2017-03-28 An intoxicating sui generis novel by “the greatest mesmerist of modern times” (André Breton) The wealthy scientist Martial Canterel guides a group of visitors through his expansive estate, Locus Solus, where he displays his various deranged inventions, each more spectacular than the last. First, he introduces a machine propelled by the weather, which constructs a mosaic out of varying hues of human teeth, then shows a hairless cat charged with a powerful electric battery, and next a bizarre theater in which corpses are reanimated with a special serum to enact the most important movements of their past lives. Wondrously imaginative and narrated with Roussel’s deadpan wit, Locus Solus is unlike anything else ever written.

**Genetics, Health Care and Public Policy** Alison Stewart,Philippa Brice,Hilary Burton,Paul Pharoah,Simon Sanderson,Ron Zimmern,2007-05-17 Genetics, Health Care and Public Policy is an

introduction to the new discipline of public health genetics. It brings together the insights of genetic and molecular science as a means of protecting and improving the health of the population. Its scope is wide and requires an understanding of genetics, epidemiology, public health and the principles of ethics, law and the social sciences. This book sets out the basic principles of public health genetics for a wide audience from those providing health care to those involved in establishing policy. The emphasis throughout the text is on providing an accessible introduction to the field. The content moves from the basic concepts, including definitions and history, through chapters on genetics, genetic technology, epidemiology, genetics in medicine, genetics in health services, ethical, legal and social implications, to the implications for health policy. It provides one-stop, introductory coverage of this rapidly developing and multidisciplinary field.

Control of Spacecraft and Aircraft Arthur Earl Bryson, 1994-06-05

Here a leading researcher provides a comprehensive treatment of the design of automatic control logic for spacecraft and aircraft. In this book Arthur Bryson describes the linear-quadratic-regulator (LQR) method of feedback control synthesis, which coordinates multiple controls, producing graceful maneuvers comparable to those of an expert pilot. The first half of the work is about attitude control of rigid and flexible spacecraft using momentum wheels, spin, fixed thrusters, and gimbaled engines. Guidance for nearly circular orbits is discussed. The second half is about aircraft attitude and flight path control. This section discusses autopilot designs for cruise, climb-descent, coordinated turns, and automatic landing. One chapter deals with controlling helicopters near hover, and another offers an introduction to the stabilization of aeroelastic instabilities. Throughout the book there is a strong emphasis on the mathematical modeling necessary for

designing a good feedback control system. The appendixes summarize analysis of linear dynamic systems, synthesis of analog and digital feedback control, simulation, and modeling of flexible vehicles.
