Driving Demand for Broadband Networks and Services Raul L. Katz,Taylor A. Berry,2014-06-21 This book examines the reasons why various groups around the world choose not to adopt broadband services and evaluates strategies to stimulate the demand that will lead to increased broadband use. It introduces readers to the benefits of higher adoption rates while examining the progress that developed and emerging countries have made in stimulating broadband demand. By relying on concepts such as a supply and demand gap, broadband price elasticity, and demand promotion, this book explains differences between the fixed and mobile broadband demand gap, introducing the notions of substitution and complementarity between both platforms. Building on these concepts, 'Driving Demand for Broadband Networks and Services' offers a set of best practices and recommendations aimed at promoting broadband demand. The broadband demand gap is defined as individuals and households that could buy a broadband subscription because they live in areas served by telecommunications carriers but do not do so because of either economic, limited awareness, or lack of digital literacy reasons. This grouping represents a range from 30% of the population in the US, 40% in Germany, and over 80% in most emerging countries. Research indicates that broadband usage is critical for social development, economic performance, and overall welfare

and so it behoves governments to encourage demand. This study is the first of its kind to address the demand side of broadband diffusion, incorporating an economic analysis while offering real world examples of policies and initiatives that have successfully spurred demand in developed and emerging markets alike. This book is intended for policy makers, managers of telecommunications and other technology companies, as well as academics and graduate students in the areas of public policy, economic development, and technology management. This book is an eye-opener for policy makers. Traditionally ICT policy has focused on the supply side. Katz and Berry develop great ideas to leapfrog Internet penetration from the demand side, where the value of the Internet is. - Diego Molano Vega, Minister of Information Technologies and Communications of Colombia This book is an instant classic. It brilliantly and convincingly lays out the case why dealing with inadequate internet penetration has moved from the creation of supply to one of encouraging demand. It provides an information-rich and well-written presentation of the factors holding back people from becoming users, and offers a hugely valuable survey of the various programs around the world to make the broadband internet truly useful to people everywhere. It is the kind of book writers in this field will use constantly. - Eli Noam, Professor of Finance and Economics, Columbia Business School This new study by Katz and Berry examines the rationale for national broadband plans and the evidence for their success in driving demand. It presents the latest data on broadband in a range of case study countries, and provides best practice advice for policy-makers and development practitioners. - Dr Tim Kelly, Lead ICT Policy Specialist, World Bank

Netspaces Katharine S. Willis,2017-05-15 The focus of this book is on understanding and explaining the way that our increasingly networked world impacts on the legibility of cities; that is

how we experience and inhabit urban space. It reflects on the nature of the spatial effects of the networked and mediated world; from mobile phones and satnavs to data centres and wifi nodes and discusses how these change the very nature of urban space. It proposes that netspaces are the spaces that emerge at the interchange between the built world and the space of the network. It aims to be a timely volume for both architectural, urban design and media practitioners in understanding and working with the fundamental changes in built space due to the ubiquity of networks and media. This book argues that there needs to be a much better understanding of how networks affect the way we inhabit urban space. The volume defines five characteristics of netspaces and defines in detail the way that the spatial form of the city is affected by changing practices of networked world. It draws on theoretical approaches and contextualises the discussion with empirical case studies to illustrate the changes taking place in urban space. This readable and engaging text will be a valuable resource for architects, urban designers, planners and sociologists for understanding how of networks and media are creating significant changes to urban space and the resulting implications for the design of cities.

The Reconstruction of Space and Time Rich Ling,2017-07-28 One of the most significant and obvious examples of how mobile communication influences our understanding of time and space is how we coordinate with one another. Mobile communication enables us to call specific individuals, not

general places. Regardless of location, we are able to make contact with almost anyone, almost anywhere. This advancement has changed, and continues to change, human interaction. Now, instead of agreeing on a particular time well beforehand, we can iteratively work out the most convenient time and place to meet at the last possible moment--on the way to the meeting or once we arrive at the destination. In their early days, mobile devices were primarily used for various types of emergency situations and for work. In some cases, the device was an essential element in various business operations or used so that overseas workers could communicate with their families. The distance between a remote posting and the people back home was suddenly and dramatically reduced. People began to share these devices not necessarily out of economic issues, but also questions of family and interpersonal dynamics. The process of sharing decisions as to who is a legitimate partner makes the nature of relationships more explicit. By examining the economy of sharing, we not only see how sharing mobile phones restructures social space, but are also given insight into an individual's web of interactions. This cutting-edge book deals with modern ways of thinking about communication and human interaction; it will illuminate the ways in which mobile communication alters our experience with space and time.

Consuming the Entrepreneurial City Anne Cronin, Kevin Hetherington, 2008-04-07 This collection offers a global perspective on the changing character of cities and the increasing importance that consumer culture plays in defining their symbolic economies. Increasingly, forms of spectacle have come to shape how cities are imagined and to influence their character and the practices through which we know them - from advertising and the selling of real estate, to youth cultural consumption practices and forms of entrepreneurship, to the regeneration of urban areas under the guise of the heritage industry and the development of a WiFi landscape. Using examples of

cities such as New York, Sydney, Atlantic City, Barcelona, Rio de Janeiro, Douala, Liverpool, San Juan, Berlin and Harbin this book illustrates how image and practice have become entangled in the performance of the symbolic economy. It also argues that it is not just how the urban present is being shaped in this way that is significant to the development of cities but also that a prominent feature of their development has been the spectacular imagining of the past as heritage and through regeneration. Yet the ghosts that this conjures up in practice offer us a possible form of political unsettlement and alternative ways of viewing cities that is only just beginning to be explored. Through this important collection by some of the leading analysts of consumption, cities and space *Consuming the Entrepreneurial City* offers a cutting edge analysis of the ways in which cities are developing and the implications this has for their future. It is essential reading for students of Urban Studies, Geography, Sociology, Cultural Studies, Heritage Studies and Anthropology.
