L.A., 1971 Kevin Messina, 2014 This sequence of 12 images--all taken in Los Angeles, California on the same day in 1971--represents some of the earliest black-and-white work by American photographer Anthony Hernandez (born 1947). Beautifully printed in tritone on McCoy Silk coated paper, the book features cloth end sheets and printed aluminum front and back covers.

IoT Souvik Pal, Vicente García Díaz, Dac-Nhuong Le, 2020-06-03 IOT: Security and Privacy Paradigm covers the evolution of security and privacy issues in the Internet of Things (IoT). It focuses on bringing all security and privacy related technologies into one source, so that students, researchers, and practitioners can refer to this book for easy understanding of IoT security and privacy issues. This edited book uses Security Engineering and Privacy-by-Design principles to design a secure IoT ecosystem and to implement cyber-security solutions. This book takes the readers on a journey that begins with understanding the security issues in IoT-enabled technologies and how it can be applied in various aspects. It walks readers through engaging with security challenges and builds a safe infrastructure for IoT devices. The book helps readers gain an understanding of security architecture through IoT and describes the state of the art of IoT countermeasures. It also differentiates security threats in IoT-enabled infrastructure from traditional ad hoc or infrastructural networks, and provides a comprehensive discussion on the security challenges and solutions in RFID, WSNs, in IoT. This book aims to provide the concepts of related technologies and novel findings of the researchers through its chapter organization. The primary audience includes specialists, researchers, graduate students, designers, experts and engineers who are focused on research and security related issues. Souvik Pal, PhD, has worked as Assistant Professor in Nalanda Institute of Technology, Bhubaneswar, and JIS College of Engineering, Kolkata (NAAC A Accredited College). He is the organizing Chair and Plenary Speaker of RICE Conference in Vietnam; and organizing co-convenor of ICICIT, Tunisia. He has served in many conferences as chair, keynote speaker, and he also chaired international conference sessions and presented session talks internationally. His research area includes Cloud Computing, Big Data, Wireless Sensor Network (WSN), Internet of Things, and Data Analytics. Vicente García-Díaz, PhD, is an Associate Professor in the Department of Computer Science at the University of Oviedo (Languages and Computer Systems area). He is also the editor of several special issues in prestigious journals such as Scientific Programming and International Journal of Interactive Multimedia and Artificial Intelligence. His research interests include eLearning, machine learning and the use of domain specific languages in different areas. Dac-Nhuong Le, PhD, is Deputy-Head of Faculty of Information Technology, and Vice-Director of Information Technology Apply and Foreign Language Training Center, Haiphong University, Vietnam. His area of research includes: evaluation computing and approximate algorithms, network communication, security and vulnerability, network performance analysis and simulation, cloud computing, IoT and image processing in biomedical. Presently, he is serving on the editorial board of several international journals and has authored nine computer science books published by Springer, Wiley, CRC Press, Lambert Publication, and Scholar Press.

NETWORKING 2010 Mark Crovella, Laura Marie Feeney, Dan Rubenstein, S.V. Raghavan, 2010-04-23 This book constitutes the refereed proceedings of the 9th International IFIP TC6 Networking Conference, NETWORKING 2010, held in Chennai, India, in May 2010. The 24 revised full papers and 9 work in progress papers were carefully reviewed and selected from 101 submissions for inclusion in the book. The papers cover a variety of research topics in the area of P2P and overlay networks; performance measurement; quality of service; ad hoc and sensor networks; wireless networks, addressing and routing; and applications and services.

Landscape and the Environment in Hollywood Film Ellen E. Moore, 2017-11-09 This book systematically explores how popular Hollywood film portrays environmental issues through various genres. In so doing, it reveals the influence exerted by media consolidation and the drive for profit on Hollywood's portrayal of the natural landscape, which ultimately shapes how environmental problems and their solutions are presented to audiences.

Analysis is framed by a consideration of how cultural studies can make more theoretical and practical room for environmental concern, thereby expanding its capacity for critical examination. The book begins by introducing the theoretical underpinning of the research as it relates to cultural studies, landscape, and genre. In the chapters that follow, each genre is taken in turn, starting with popular animated family films and progressing through spy thrillers, eco-thrillers, science fiction, Westerns, superhero films, and drama. This book is ideal for students and scholars in a variety of disciplines, including film, environmental studies, communication, political economy, and cultural studies.

Grays the Mountain Sends Kevin Messina,2014 Grays the Mountain Sends by Bryan Schutmaat documents the rugged landscapes and people of the great American West. The images describe a series of mining sites and small mountain towns and the people who have worked in them, built them, and a few younger people who might, or might not, be looking for a way out of them.

Mineralogical Crystallography Jakub Plášil,Juraj Majzlan,Sergey V. Krivovichev,2017 At the dawn of structural crystallography, Friedrich, Knipping and von Laue carried out the first experiments and developed the theory of X-ray diffraction. From these early days, structural crystallography evolved at its own pace and found new partners in chemistry, physics, materials science, biology and other fields of physical sciences. Both morphological and structural crystallography, however, have remained as important instruments in the mineralogist's toolbox until today. Efforts to enhance the existing instrumentation, to improve our understanding of the theory of diffraction, to study nanoparticulate or poorly ordered materials, and to master large, complex structures continue in all fields of physical sciences. Mineralogy can thus use the fruits of this labour and include them in its toolbox.

Climate Change and Soil Interactions Majeti Narasimha Var Prasad,Marcin Pietrzykowski,2020-03-06 *Climate Change and Soil Interactions* examines soil system interactions and conservation strategies regarding the effects of climate change. It presents cutting-edge research in soil carbonization, soil biodiversity, and vegetation. As a resource for strategies in maintaining various interactions for eco-sustainability, topical chapters address microbial response and soil health in relation to climate change, as well as soil improvement practices. Understanding soil systems, including their various physical, chemical, and biological interactions, is imperative for regaining the vitality of soil system under changing climatic conditions. This book will address the impact of changing climatic conditions on various beneficial interactions operational in soil systems and recommend suitable strategies for maintaining such interactions. *Climate Change and Soil Interactions* enables agricultural, ecological, and environmental researchers to obtain up-to-date, state-of-the-art, and authoritative information regarding the impact of changing climatic conditions on various soil interactions and presents information vital to understanding the growing fields of biodiversity, sustainability, and climate change. Addresses several sustainable development goals proposed by the UN as part of the 2030 agenda for sustainable development Presents a wide variety of relevant information in a unique style corroborated with factual cases, colour images, and case studies from across the globe Recommends suitable strategies for maintaining soil system interactions under changing climatic conditions

Many are Called Walker Evans,2004-01-01 Between 1936 and 1941 Walker Evans and James Agee collaborated on one of the most provocative books in American literature, *Let Us Now Praise Famous Men* (1941). While at work on this book, the two also conceived another less well-known but equally important book project entitled *Many Are Called*. This three-year photographic study of subway passengers made with a hidden camera was first published in 1966, with an introduction written by Agee in 1940. Long out of print, *Many Are Called* is now being reissued with a new foreword and afterword and with exquisitely reproduced images from newly prepared digital scans. *Many Are Called* came to fruition at a slow pace. In 1938, Walker Evans began surreptitiously photographing people on the New York City subway. With his camera hidden in his coat—the lens peeking through a

buttonhole—he captured the faces of riders hurtling through the dark tunnels, wrapped in their own private thoughts. By 1940-41, Evans had made over six hundred photographs and had begun to edit the series. The book remained unpublished until 1966 when The Museum of Modern Art mounted an exhibition of Evans’s subway portraits. This beautiful new edition—published in the centenary year of the NYC subway—is an essential book for all admirers of Evans’s unparalleled photographs, Agee’s elegant prose, and the great City of New York.

Islands of the Blest Bryan Schutmaat, Ashlyn Davis, 2016-11 These photographs depict various places in the American West. They were taken over a one hundred year period, from the 1870s through the 1970s. The photographers presented here range from the completely unknown to some of America's most distinguished practitioners of the medium. All images were sourced from digital public archives and remain readily available to download.--page after plate 43.

Three Big Bangs Holmes Rolston III, 2010-10-11 By dividing the creation of matter, energy, life, and mind into three big bangs, Holmes Rolston III brings into focus a history of the universe that respects both scientific discovery and the potential presence of an underlying intelligence. Matter-energy appears, initially in simpler forms but with a remarkable capacity for generating heavier elements. The size and expansion rate of the universe, the nature of electromagnetism, gravity, and nuclear forces enable the explosion of life on Earth. DNA discovers, stores, and transfers information generating billions of species. Cognitive capacities escalate, and with neural sentience this results in human genius. A massive singularity, the human mind gives birth to language and culture, increasing the brain's complexity and promoting the spread of ideas. Ideas generate ideals, which lead life to take on spirit. The nature of matter-energy, genes, and their genesis therefore encourages humans to wonder where they are, who they are, and what they should do.

Seaforth World Naval Review 2022 Conrad Waters, 2021-12-30 The essential compendium covering the year in naval developments—the only annual overview of its kind: “Very highly recommended.” —Warship World For more than a decade, this annual volume has provided an authoritative summary of all that has happened to the world’s navies and their ships in the previous twelve months. It combines regional surveys with major articles on important new warships, and looks at wider issues of significance to navies such as aviation and weaponry. The contributors come from around the globe, and in addition to providing a balanced picture of naval developments, they interpret their significance and explain their context. Along with its regular regional reviews, the 2022 volume focuses on three fleets: the Sri Lankan Navy, the Spanish Navy, and the Royal Navy. There are in-depth articles on the Argentinian Bouchard Class OPVs, the Russian Project 20380 Stereguschchiy Class corvettes, and the Royal Navy’s Batch 2 “River” Class OPVs. The technological section looks at optronic systems and offboard mine countermeasures, and there is the regular review of what is happening in naval aviation, which includes coverage of the US Marine/Navy MV-22 tiltrotor. Now firmly established as the only annual naval overview of its type in the world, The Seaforth World Naval Review is essential reading for the professional and enthusiast alike, taking readers to the heart of contemporary maritime affairs. “A marvelous asset for those wishing to keep up to date with naval matters.” —Warship World Includes photographs

Clinical Guide to Depression and Bipolar Disorder Martin B. Keller, William H. Coryell, M.D., Jean Endicott, Jack D Maser, 2013 Conceived in the early 1970s to study the phenomenology, diagnosis, genetics, and clinical course of depression, the NIMH Collaborative Depression Study (CDS) has influenced research and practice since its inception. Findings From the Collaborative Depression Study summarizes key findings from the study and the related literature to provide comprehensive and up-to-date knowledge on the course and outcome of illness in mood disorders. Nowhere else can clinicians find such detailed longitudinal data, combined with astute clinical analysis of the current research. Each chapter is accompanied by a time-saving summary, as well as a section on clinical implications that translates the findings into practical points and key recommendations clinicians need to know to provide care.

Essentials of Clinical Psychopharmacology Alan F. Schatzberg, Charles B. Nemeroff, 2013 This third edition of *Essentials of Psychopharmacology* is, like its predecessors, based on the premier textbook in the field, *The American Psychiatric Publishing Textbook of Psychopharmacology*, now in its fourth edition. The *Essentials* format is designed to deliver core knowledge to the busy trainee or practitioner in a succinct and accessible manner. *Essentials of Psychopharmacology* provides a complete overview of clinically focused pharmacotherapeutic principles of vital interest to psychiatry residents, primary care physicians, and other health care professionals. Updated with the latest research findings since the publishing of the fourth edition, *Essentials* features new chapters on recently introduced medications and updated chapters on others. The book is divided into two parts: *Classes of Psychiatric Treatments*, which systematically reviews psychotropic medications within each drug class (e.g., antidepressants and anxiolytics, antipsychotics), and *Psychopharmacological Treatment*, which outlines current pharmacotherapeutic approaches in the major psychiatric disorders as well as in specific patient populations. Although the latter part has been streamlined in this new edition, coverage of critical information such as approved indications, drug interactions, side effects, and other prescribing factors remains comprehensive. Clinicians seeking a reliable reference and guide to the core knowledge base and practice of clinical psychopharmacology can do no better than this new edition of *Essentials of Psychopharmacology*.

Marine Radioactivity Hugh D. Livingston, 2004 This book on Marine Radioactivity sets out to cover most of the aspects of marine radioactivity which have been the focus of scientific study in recent decades. The authors and their reviews divide into topic areas which have defined the field over its history. They cover the suite of natural radioisotopes which have been present in the oceans since their formation and quantitatively dominate the inventory of radioactivity in the oceans. Also addressed are the suite of artificial radionuclides introduced to the oceans as a consequence of the use of the atom for development of nuclear energy, nuclear weapons and various applications of nuclear science. The major source of these continues to derive from the global fallout of atmospheric tests of nuclear weapons in the 1950s and 1960s but also includes both planned and accidental releases of radioactivity from both civilian and military nuclear technology. The other division of the major study direction depends on whether the objective is to use the radionuclides as powerful tools to study oceanic processes, to describe and understand the ocean distribution of the various natural or artificial radionuclides or to assess the different radionuclides' impact on and pathways to man or marine organisms. The oceans cover 70% of the Earth's surface and thus contains a corresponding large share of the Earth's radioactivity. *Marine Radioactivity* covers topics of recent scientific study in this young field. It examines both natural radioactivity (radioactivity naturally present in oceans since their formation) and artificial radioactivity (radioactivity introduced by man and use of atomic and nuclear energy) with regard to possible effects on the global environment.
