You Gonna Finish That Dragon? Barry Parham,2013-08-13 Praise for You Gonna Finish That Dragon? Parham is at the very top echelon of American humorists, equal to Dave Barry or David Sedaris on their best day. Linton Robinson (award-winning author of Bailin') In his seventh critically-acclaimed collection, humorist Barry Parham points his Pardon Me?-o-meter at American culture, science, men & women, ferret owners, and why Paul Revere was a lousy dentist.

One Perfect Day Rebecca Mead,2008-07-29 Astutely observed and deftly witty, One Perfect Day masterfully mixes investigative journalism and social commentary to explore the workings of the wedding industry-an industry that claims to be worth \$160 billion to the U.S. economy and which has every interest in ensuring that the American wedding becomes ever more lavish and complex. Taking us inside the workings of the wedding industry-including the swelling ranks of professional event planners, department stores with their online registries, the retailers and manufacturers of bridal gowns, and the Walt Disney Company and its Fairy Tale Weddings program-New Yorker writer Rebecca Mead skillfully holds the mirror up to the bride's deepest hopes and fears about her wedding day, revealing that for better or worse, the way we marry is who we are.

Deterrence George P. Shultz,Sidney D. Drell,James E. Goodby,2013-09-01 Drawn from the third in a series of conferences the Hoover Institution at Stanford University on the nuclear legacy of the cold war, this report examines the importance of deterrence, from its critical function in the cold war to its current role. Recognizing that today's international environment is radically different from that which it was during the cold war, the need is pressing to reassess the role of nuclear weapons in deterrence in the world of today and to

The Bipolar Expeditionist Keith Steadman,2008-02 The Bipolar Expeditionist describes what it is like to experience every level of mania right up to the fully blown stage, as well as the depressing stagnating flipside. Far less stigma and taboo are attached to illnesses of the mind these days, but that's still not good enough, so these issues are also addressed. This book enables readers of any level, age or race to comprehend an often tricky subject in a way that isn't too heavy and overpowering, but with just enough mental glue to stick. The Bipolar Expeditionist is not only a true story, it is an inspirational tool that can be used by caregivers, sufferers and medical professionals for many years to come. Optimism oozes out of the pages, telling the bipolar beholder or their loved ones that all is never lost. By the time The Bipolar Expeditionist has been read you will realise exactly why you will never be left alone, and that despite the agonizing slog you will always past the test, and then go on to enjoy a fulfilling and creative life, just as God intended.

Logic and Programming Michel. Parent,2013-06-29 In contrast to the effortless ease with which human beings control their limbs, the design of controllers for robotic manipulator arms is a detailed, meticulous business. Motors controlling the arms need to be started and stopped at just the right moment so that the performance demanded by the user may be achieved at the end of a complicated manoeuvre. And yet, the same user wishes to express the task for the robot in the simplest possible terms without reference to the minute details of control sequences that his task demands. It is the design of such inter faces between man and machine that is the subject of trus volume. Parent and Lurgeau develop the subject in a direct and logical order. They first explain the principles of maximal effort control which not only ensure that motors are driven to provide high accuracy, but also that this should be done with the least waste of energy and in the shortest possible time. In this context, they describe the operation of pneumatic logical devices that make rapid decisions at power levels that exceed, by several orders, those that can be achieved with electronic devices. They achieve this whilst keeping the reader aware of the logical principles that are involved in the design of master control units: the devices responsible for appropriate actions being taken as a function of time.

Yesterday Makers Russell Kightley,2016-07-24 Paxton wants vengeance, and his time ship—which he barely understands—can give it to him. And all without the paradoxes. But there's less to Paxton's world than he realises—much less. Pierce is Paxton's mentor. Pierce is smart and charismatic and highly evolved, but he can't help Paxton. And Pierce has bigger fish to fry. A creative act—a weird collaboration between a woman and a machine—underpins everything. But everything has a cost... Programming in GW-BASIC P. K. McBride,2016-06-06 Programming in GW-BASIC provides a reference guide on GW-Basic along with a range of extra commands and functions. The book discusses starting a program, program planning and the essentials of GW-Basic, including the most commonly used commands; how data is stored in memory; how a program fits together; and the use of the keyboard

and screen in editing. The text also describes graphics and color and the string-handling functions. The principles and concepts of program structures, such as the Paintbox program and chaining, and the use of the Turtle graphics, such as Logo and DRAW, are also considered. The book covers two of the key techniques for handling data in quantity (sorting into order and searching for specific items), statistical analysis, and display program. The text then tackles PEEK and POKE, which examine sections of memory and serve as alternative to PRINT for creating screen displays, and advanced graphics, which enables one to analyze the screen, develop first a double-size print utility, then a sprite designer and some movement routines. The selection is useful to computer programmers and students taking computer courses.
