A Stopwatch from Grampa Loretta Garbutt,2020-04-07 A touching portrayal of the loss of a grandparent. "When summer started, I got Grampa's stopwatch," a small child says. "I don't want his stopwatch. I want him." Grampa used to time everything. A race to the end of the street and back: 24 seconds. Eating bubblegum ice cream: 1 minute, 58 seconds. But now, Grampa's gone. "There are no more Grampa minutes, Grampa seconds," the child says. "Time just stops." But as time goes on, the stopwatch becomes a cherished symbol of remembrance, and the child uses it to carry on Grampa's favorite pastimes and traditions. A treasured ritual from the past can sometimes offer the perfect bridge to the future.

Tools and Algorithms for the Construction and Analysis of Systems Joost-Pieter Katoen,Perdita Stevens,2002-03-20 ETAPS 2002 was the ?fth instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998by combining a number of existing and new conferences. This year it comprised 5 conferences (FOSSACS, FASE, ESOP, CC, TACAS), 13 satellite workshops (ACL2, AGT, CMCS, COCV, DCC, INT, LDTA, SC, SFEDL, SLAP, SPIN, TPTS, and VISS), 8invited lectures (not including those speci?c to the satellite events), and several tutorials. The events that comprise ETAPS address various aspects of the system - velopment process, including speci?cation, design, implementation, analysis, and improvement. The languages, methodologies, and tools which support these - tivities are all well within its scope. Di?erent blends of theory and practice are represented, with an inclination towards theory with a practical motivation on one hand and soundly-based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

Developing the Athlete William J. Kraemer,Nicholas A. Ratamess,Thomas Newman,2024-02-27 Over the past decade, the complexity of athlete development has increased, and sport science has become enthralled with metrics and genetics. While an abundance of information has emerged, there is still a lack of practical guidance on how to integrate this information with training to help athletes achieve their potential. *Developing the Athlete: An Applied Sport Science Roadmap for Optimizing Performance* brings much-needed clarity, providing a proven blueprint for bringing together the many fields related to sport science via an athlete development team that navigates the day-to-day development of each athlete. Developed by a team of renowned authors—including William Kraemer, one of the most prolifically published sport scientists in history—*Developing the Athlete: An Applied Sport Science Roadmap for Optimizing Performance* is the first resource of its kind. It explains the integration of sport science through the development of an athlete development team, implementing a process of testing, evaluating, assessing, and monitoring athlete training and performance. You will learn how data generated by the athlete development team are translated into training programs that promote the physical and psychological development an athlete needs to compete and succeed at every level of competition. You will also find step-by-step explanations of how to create a testing "fingerprint" unique to each athlete, as well as case studies and success stories that demonstrate how the concepts in the book have been experienced in real life. Get a better understanding of how the use of sport science can improve the skills needed for long-term athlete development. *Developing the Athlete: An Applied Sport Science Roadmap for Optimizing Performance* will help all types of sport performance professionals prioritize and apply the three Cs—credentials, competence, and commitment—so you can tap into known scientific principles and practices to develop a path for success for all your athletes. Cortex-M Programming Hee Jae Park ,Chibum Lee,2021-09-30 This book covers the Cortex-M, a 32-bit MCU (microcontroller unit) built with an ARM processor core, and the Mbed OS, an operating system developed to efficiently manage processors. The book is largely divided into five parts. In Part 1, the background of the microcontroller, necessity, characteristics, and configuration of the Mbed OS will be described. Part 2 is about programming for basic input/output devices, and lays the foundation by learning not only basic functions but also their utilization. In studying basic input/output functions supported by Mbed OS over several chapters, it is configured to first look at basic concepts and develop utilization skills through practice using those functions. For example, learning the functions of the Timer class will help you to think from various viewpoints about the structure of the program. In Part 3, the major communication methods such as UART, I2C and SPI necessary to design and realize an embedded system will be studied since they have not been covered in detail in despite of their importance. In addition to the interface with peripherals using these communication methods, topics about efficient communication using callback functions are also examined. Part 4 covers advanced programming topics related to Bus I/O, RTOS, and Circular Buffer. In particular, RTOS classes such as Thread, Mutex, and Queue will be learned through various examples. Part 5 introduces projects that require multiple functions and concepts of Mbed OS, so that readers can improve their application skills. For example, we will challenge to develop ultrasonic rangefinder, stepper motor drive, encoder reading, DC motor PID control, Lidar scanner, and AHRS (attitude heading reference system) using IMU (inertial measurement unit) sensor to enhance the overall application capabilities and further to obtain practical system configuration skills.
